Senator moves to a	amend S.F. No. 4269	as follows:	

## "Sec. 18. [216C.185] PLANNING STRATEGY FOR EQUITABLE, SUSTAINABLE ENERGY FUTURE BY 2040.

- (a) The Department of Commerce Division of Energy Resources, in consultation with other state agencies and the Legislative Energy Commission, must develop a detailed plan to equitably transition the state of Minnesota to an economy fueled entirely by renewable energy that ends Minnesota's net greenhouse gas emissions with the urgency needed to address the climate crisis. The plan must be designed to achieve net-zero greenhouse gas emissions:
- (1) using only renewable energy;

- 1.12 (2) in a manner that addresses energy and pollution burdens in communities located in environmental justice areas of concern; and
- 1.14 (3) on a timeline that enables Minnesota to be the first state in the nation to achieve these goals, but no later than 2040.
  - (b) In developing the plan for this economy-wide energy transition, the Division of Energy Resources must consult with stakeholders as design and development partners to identify (1) specific actions to take, and (2) a specific timeline to take the actions, in order to make Minnesota net-zero in greenhouse gas emissions using only renewable energy resources to support the entire Minnesota economy. Stakeholders consulted must include but are not limited to:
- (1) representatives from frontline communities, displaced workers, and neighborhoods
   in environmental justice areas of concern;
- (2) representatives from cooperative, municipal, and investor-owned utilities;
- 1.25 (3) natural resources and environmental advocacy groups;
- 1.26 (4) representatives from labor, industry, and farming; and
- 1.27 (5) technical and scientific experts.
- 1.28 (c) The Division of Energy Resources and the stakeholders must consider the following
  1.29 when creating the plan:
- (1) the economic and resulting environmental costs of continued reliance on fossil fuels
   and greenhouse gas emissions;

(2) the creation of jobs and industries in Minnesota that result from transitioning to	<u>a</u>
net-zero greenhouse gas emissions economy faster than other states;	
(3) the appropriate energy efficiency and renewable energy investments needed in	
Minnesota to end the economic losses to the Minnesota economy resulting from importat	ion
of fossil fuels;	
(4) the new technologies for energy efficiency, storage, transmission, and renewable	<u> </u>
generation needed to reliably meet the demand for energy; and	
(5) changes in agriculture that sequester carbon in the soil, and the environmental bene	fits
to ecosystems, water quality, and public health stemming from the agricultural changes	<u>.</u>
(d) The plan must consider and, to the extent feasible, take advantage of all known	
technologies to facilitate net-zero greenhouse gas emissions and end fossil fuel use in pov	<i>v</i> er
generation, heating and cooling, industry, agriculture, and transportation.	
(e) The plan must, to the maximum extent feasible, (1) recognize the importance of	
inclusive community-driven processes in determining any actions and investments to achie	eve
the goal, and (2) facilitate a sufficient flow of resources to ensure that the most impacte	<u>:d</u>
communities are supported as full partners in designing, developing, and delivering action	ons
and investments.	
(f) The Division of Energy Resources must deliver the plan to the legislative committee	ees
and divisions with jurisdiction over energy policy by January 15, 2023, and must report	<u>t</u>
annually thereafter on progress, technological advancements, and changing conditions t	hat
may enable or necessitate acceleration toward attaining the net-zero economy."
