Senator Foung Hawj  
Environment, Climate, and Legacy Committee  
Minnesota Senate

**Re: Support for the Frontline Communities Protection Act (SF 466)**

Chair Hawj and Committee Members,

The Frontline Communities Protection Coalition is proud to support the cumulative impacts bill language, SF 466, within the Environment & Climate Budget Omnibus bill. This legislation is the culmination of years of work by community members, in cooperation with the Minnesota Pollution Control Agency. Organizers at Community Members for Environmental Justice and the East Phillips Neighborhood Institute are fighting for a future where facilities like Northern Metals aren't next door – and instead, are replaced with things their communities really need: a community center, truly affordable housing, food production, mutual aid, etc. We believe that this bill is a crucial part of that vision.

Community members, our coalition, and the MPCA have identified a clear, glaring problem: environmental protections in Minnesota do not take into account the cumulative impacts of pollution when granting permits. There are neighborhoods in Minnesota that have unsafe drinking water, right next to highways built by bulldozing neighborhoods that no longer exist, breathing air tainted by burning trash from a waste incinerator. Our environmental protections need to reflect the ways in which multiple sources of pollution create an increased health and environmental burden, and empower overburdened communities to have an actual say in what gets built in their space.

When we consider these problems individually, we miss the way they intersect, amplifying the harm done. We miss how someone with severe asthma might be forced to live next to an 800 vehicle depot in a neighborhood with barely buried arsenic contamination. That same person might already have been exposed to life changing amounts of lead – but as long as that waste incinerator isn't emitting “too much” lead, it can keep burning microwaves and USB cords. Consequently, we're missing out on jobs that strengthen our communities: zero waste jobs, clean energy jobs, and the care work necessary to keep each other healthy and happy.

This isn't just an issue for folks in the Twin Cities. We've strengthened the language in this bill so that all areas of Minnesota facing forced scarcity will be able to use this law to push back against industrial polluters, just like environmental justice areas in the metropolitan Twin Cities area. We don't want to create new sacrifice zones anywhere in Minnesota.

We believe this bill creates a fair process that gives permit applicants a chance to conclusively show that they are not harming these communities. This bill clearly defines which neighborhoods need help the most. This bill also centers around community agency – it's not about saying what can or cannot be constructed in environmental justice communities, but rather gives those communities a

chance to fully understand the potential harms and determine for themselves if they want a project in their community.

We are also not asking every single project to go through this process and we understand there are some permits that simply do not have the potential to disproportionately contribute to the problem. We have worked with the PCA to narrow the scope of this law to those permits that have the most potential to allow harm.

We want to be very clear: this is the first step and not the last towards ensuring that every Minnesotan is able to enjoy their right to a healthy environment. Right now there are permitted facilities in Minnesota that are profiting at the expense of community members' health and wellbeing. This bill shifts the narrative around permitting to say that we are not going to keep treating certain communities as sacrifice zones. We are not going to force more pollution on overburdened communities, we are going to uplift community agency and government accountability. The fight over the roof depot in East Phillips shows that we don't have that right now. Please take this first step towards a truly just future.

Signed,

A.C.E.S.
