

# Legislative Overview

Dr. Brian Hoefs | State Veterinarian

#### **BAH Mission**

The mission of the Minnesota Board of Animal Health is to protect the health of the state's domestic animals through education and cooperation with veterinarians, producers, owners and communities.

#### Introduction

- Dr. Brian Hoefs
- State Veterinarian and Executive Director
- Appointed August 2023

#### Board members

#### **Board Members**

Erica Sawatzke | Board President, Poultry Producer, Kensington

Peggy Anne Hawkins, DVM | Board Vice President, Veterinarian, Northfield

Jessica Koppien-Fox, DVM | Veterinarian, Marshall

Alex Stade | Cattle Producer, Prior Lake

Steve Neil | Livestock Producer, Northfield

Brandon Schafer | Livestock Producer, Goodhue

Abigail Maynard, DVM | Veterinarian Specializing in Companion Animals, St. Paul Park

# Non-emergency priorities

- African Swine Fever
  - Monitoring sightings on our northern border.
- Rabies
  - Continued uptick in cases over past decade.
- Tularemia
  - Record 27 cases last year in cats.
- Kennels
  - Investigating complaints against kennels with limited scope of authority.
- Farmed cervids
  - No CWD detections last year (Aug. 2022) and implemented exclusionary fencing requirements.

# **Emergency priorities**

- Highly Pathogenic Avian Influenza
- H5N1 in livestock
- Avian Metapneumovirus

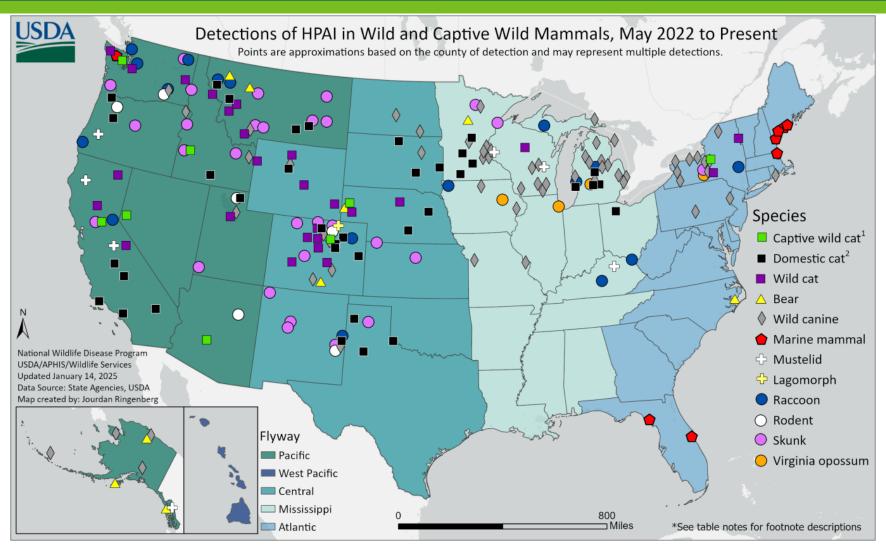

#### What is H5N1?

- H5N1 is a subtype of the influenza A virus.
- Minnesota outbreak has been active since 2022.
  - Initial concern in 2022 focused on impact to poultry.
  - Detected in other livestock in 2024 and expanded Board's response.
- What's in a name? HPAI vs. H5N1:

#### H5N1 in mammals

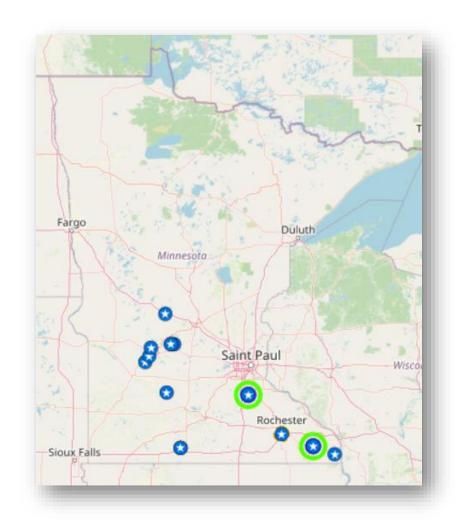

### Highly Pathogenic Avian Influenza

- Most recent detection: January 14, 2025.
- Continued surveillance and suspect testing.
- Preparing for the spring wave.
- Cost to respond: \$600,000+ in 2024
  (BAH salary only)
  - \$450,000+ last year.
- This virus is not going away.

### Highly Pathogenic Avian Influenza

- Current picture (Fall 2024 to Winter 2025)
- 11 H5N1 HPAI cases
  - 7 commercial premises
  - 4 backyard premises
- Genomic sequences show current poultry infections tied to wild birds.
  - Transmission routes still being studied.
- D1.1 and A3 subtypes
  - Current infections highlight distinct variants.
  - No spillover among dairy and poultry populations.

#### H5N1 in livestock

- Most significant in dairy industry.
- Viral spread linked to cattle movements.
- B3.13 strain of H5N1.
  - No evidence of wild bird spread.
- Biosecurity and pre-movement testing key to stop spread.

# H5N1 milk surveillance sampling

- Department of Agriculture leading sampling effort in February.
- Board will notify producer of positive.
  - Quarantine premises.
  - Permit milk movement.
  - Allowed to go to pasteurization.
- Potential for overlap of poultry and dairy cases during peak spring migration.

# Avian Metapneumovirus (aMPV)

- 871 aMPV positive tests since April 2024.
  - Likely an undercount of actual cases across Minnesota.
- aMPV affects poultry.
  - Causes respiratory infections.
  - Reproductive disorders.
  - Weaken birds' immune systems leaving them more susceptible to other bacterial or viral infections.
- Coinfections lead to significant mortality and production losses.

#### aMPV next steps

- Continues to circulate in Minnesota.
- aMPV testing stresses laboratories and surveillance efforts because sick flocks often need to be tested for both aMPV and HPAI due to the similar presentation of mortality and clinical signs.
  - There is no official response to aMPV positive flocks.
- European vaccines are approved and in use by Minnesota breeder flocks.
- USDA recently approved importation of live virus, which could be used by commercial flocks in Minnesota.

# Response fatigue

- March 25, 2025: three consecutive years responding to HPAI.
- Last year Board staff worked:
  - 8,882 hours on HPAI response.
  - 1,122 overtime HPAI hours.
  - Does not include cattle response or aMPV.
  - In addition to baseline workload.
- Deeply personal for veterinarians dedicated to caring for animals.

### Where we go from here

- 20-percent of Board funding comes from federal funds.
  - Federal funding is not guaranteed each fiscal year.
  - Minnesota does have permanent USDA staff in-state
- Diseases not going to recede.
- HPAI alone has strained Board resources.
- Focus on ensuring the Board has the resources and capabilities to maintain services.

# Thank You!

**Dr. Brian Hoefs** 

State Veterinarian and Executive Director
