

Testimony from:  
Deb Otis

**In SUPPORT of SF 1071**  
February 13, 2025  
Minnesota Senate Elections Committee

Chairman Carlson and Members of the Elections Committee,

I am writing to express FairVote Action's support for SF 1071, a bill that would give all cities and towns in Minnesota the option to use ranked choice voting in municipal elections. Five cities across the state have already proven how this reform can improve elections by ensuring fairer, more representative outcomes in crowded local races. This bill would simply give other cities, counties, and school boards the opportunity to do the same.

Further, ranked choice voting will: (1) offer voters more choices on their ballots; (2) promote more positive, issues-focused campaigns; (3) save money for municipalities with two-round elections who use RCV to condense those into a single round; and (4) create a more level playing field for female candidates and candidates of color.

FairVote Action is a national nonpartisan organization that educates and advocates for electoral system reforms that improve our elections. We are seen as a leading national resource on ranked choice voting (RCV). I am the Director of Policy and Research for FairVote Action and, as part of my job, I study the impacts of RCV in the places that use it.

Approximately 14 million voters in 51 jurisdictions across the U.S. use RCV in public elections, including Minneapolis, St. Paul, Minnetonka, Bloomington, and St. Louis Park. It is an increasingly popular, party-neutral electoral reform with successes including:

- New York City held the largest citywide RCV races in U.S. history in its 2021 primaries. Its successful voter education campaign resulted in much higher voter participation than recent primaries, high use of rankings, and a low error rate. 95% of voters said voting with RCV was simple, and New York City successfully used RCV again in 2023.
- Alaska became the first state to elect its governor, state legislature, and federal offices using RCV. 84%<sup>1</sup> of Alaska voters said the system was simple to use and 60%<sup>2</sup> said it resulted in more competitive races than past elections.
- Legislatures in 14 states have passed RCV bills since 2020, including "local options" legislation that allows municipalities in Maine, Utah, Virginia, and Colorado to begin using RCV.
- Five Democratic presidential primaries and caucuses used RCV ballots in 2020. In 2024, voters in Maine used RCV ballots in both parties' presidential primaries, and the U.S. Virgin Islands Republican Party used RCV in its presidential primary.

<sup>2</sup> Polling Shows Alaskan Voters Received Clear Instructions on the System, Found Ranking to be "Simple," and saw more Competitive Races. Alaskans for Better Elections. (2022). <https://www.alaskansforbetterelections.com/polling-shows-alaskan-voters-received-clear-instructions-on-the-system-found-ranking-to-be-simple-and-saw-more-competitive-races/>

- Voters have approved RCV ballot measures in 31 of the last 32 cities to vote on it, and in Maine and Alaska.

In RCV elections, voters may rank candidates in order of preference: first, second, third, and so on. If a candidate receives more than half of the first choices, they win, just like any other election. If not, the candidate with the fewest votes is eliminated, and voters who picked that candidate as “number 1” will have their votes count for their next choice. This process continues until one candidate wins a majority over their final opponent.

RCV offers voters greater choice, creating space for both voters and candidates to express a wide range of views. Voters may rank as many or as few candidates as they like but, in practice, most voters choose to use multiple rankings in order to express their full preferences.

Voters in Minnesota and across the country have made it clear that they like and understand RCV. Exit polling results find that voters in RCV cities overwhelmingly report that they like RCV and prefer it to their previous voting method.<sup>3</sup> Exit polling in Minneapolis found that 88% of voters said RCV was simple, and that 76% wanted to continue using RCV.<sup>4</sup> In Bloomington, 77% of voters found RCV simple to use and 61% said they liked RCV and wanted to continue using it.<sup>5</sup> Polling in Utah found that 82% of RCV voters found it easy to use and 94% were satisfied with the method they used to cast their ballot.<sup>6</sup>

The numbers are even higher in New York and Alaska. In New York City, 95% of poll respondents found the ballot simple and 77% want to keep using RCV.<sup>7</sup> In Alaska, 92% of voters said they received instructions on how to rank their choices,<sup>8</sup> and 84% said RCV was “simple,” including supermajorities of every ethnic group.<sup>9</sup>

Voters not only find RCV easy to use, but they understand it intuitively, especially compared to other electoral reforms. Survey data shows that more voters understand RCV than the “top-two” systems used in California and Washington.<sup>10</sup> Researchers have found no evidence

<https://www.fairvote.org/2014-survey-results>.

of racial or ethnic differences in understanding of RCV.<sup>11</sup> Voter support for RCV tends to increase over time, as voters get more chances to use it.<sup>12</sup>

A median of 68% of voters choose to rank multiple candidates.<sup>13</sup> In highly competitive or highly publicized elections, the rate is even higher. In 2024, for example, 85% of Portland voters ranked multiple candidates for mayor and 91% ranked multiple candidates for city council.<sup>14</sup> In 2021, 89% of New York City voters ranked multiple candidates for mayor;<sup>15</sup> of those who didn't rank, most said they only liked one candidate and didn't want to rank anyone else.<sup>16</sup>

Research shows that RCV also decreases negative campaigning because candidates need to reach beyond a single base of voters – and talk to everyone in order to win. Sometimes, this means appealing to be the second or third choice of voters who support a different candidate as their first choice. Studies have found that candidates use more positive language in debates,<sup>17</sup> voters in RCV cities perceive less negativity compared to voters in non-RCV cities,<sup>18,19</sup> and newspaper articles in RCV cities are more positive than in non-RCV cities.<sup>20</sup>

As more and more jurisdictions have adopted RCV, they've proven that it can be a positive experience for election administrators as well. In most cities using RCV, preliminary results are produced on election night or the day after – the same timeline as in single-choice elections.

For example, Boulder, Colorado successfully used RCV to elect its mayor for the first time in 2023. Boulder election administrators communicated with voters, the media, and stakeholders about what to expect; released RCV results on election night with visualizations of the round-by-round results; and performed a risk-limiting audit. The winner in the RCV mayoral race was called before the winners in Boulder's plurality city council races – directly contradicting some opponents' claims that RCV contests take longer to count or call. 86% of

Boulder voters said it was easy to complete their ballot, and 77% said they were satisfied with their voting experience.<sup>21</sup> Following the election in Boulder, Colorado Gov. Jared Polis endorsed RCV – citing how smooth the process was.<sup>22</sup>

RCV is particularly well-suited for elections with crowded fields, like those often seen in local elections in Minnesota. RCV ensures that elections are won with majorities without the need for costly all-candidate primaries or runoff elections – where turnout drops by a median of 41%.<sup>23</sup>

Most RCV winners are ranked among the top 3 choices by two-thirds of voters or more.<sup>24</sup> This demonstrates a measure of broad consensus among voters. Winners of RCV races usually earn the most first choices as well. When the winner is someone other than the leader in first-choice preferences, RCV has prevented an unfair outcome due to the majority splitting the vote.

Importantly, RCV addresses the problems of vote-splitting and “spoiler” candidates that sometimes result in election winners who lack majority support. In our current system, a majority of voters may support a particular ideology or party, but split their votes among candidates who support that ideology – allowing a candidate to win with a *minority* of the vote.

Recent research has found that RCV tends to result in greater election rates for women and candidates of color.<sup>25,26,27</sup> A 2024 FairVote report also found that voters of color are more likely to rank multiple candidates on their ballots.<sup>28</sup>

This has played out in practice in cities across the country – RCV elections helped lead to the first-ever majority-female City Council in New York City; the first all-female City Council in Las Cruces, New Mexico; the first Alaska Native member of Congress; and the first City Councils in Salt Lake City and Minneapolis that are majority-people of color. In 2023, St. Paul elected an all-female city council where 90% of councilors are women of color.

<sup>28</sup> Ranked Choice Voting Elections Benefit Candidates and Voters of Color: 2024 update. Otis, D. & Laverty, S. (2024) <https://fairvote.org/report/communities-of-color-2024/>

RCV's simplicity, representative outcomes, and positive experience for voters have made it an increasingly popular election method. Recommended by Robert's Rules of Order and used in hundreds of private association elections, RCV is fully constitutional, having been twice upheld in federal courts, including in the Ninth Circuit Court of Appeals in 2011 and in federal district courts in Maine in 2018 and 2020.

The issue of RCV has come before the legislature in Minnesota in previous years. With so many more prominent examples of its impact and a greater understanding of how to administer RCV effectively, the evidence in its favor has never been stronger. Voters like RCV and engage with the ranked ballot. Parties can produce strong nominees with RCV. And implementation is a smooth process.<sup>29,30</sup>

Minnesota has already proven RCV's ability to give voters more choice at the ballot box and more voice in their government. I ask you to give every city and town in the state the option to bring RCV to their own elections by supporting SF1071.

FairVote Action is available to answer any other questions from the committee or provide additional data. FairVote Action can also advise the legislature as it deems fit and be a resource for RCV implementation. You can reach me at dotis@fairvoteaction.org and my FairVote Action colleagues at info@fairvoteaction.org.

Thank you for the opportunity to testify.

Sincerely,

Director of Policy and Research at FairVote Action
