

Providing Essential Home Health Services for Children with Medical Complexities

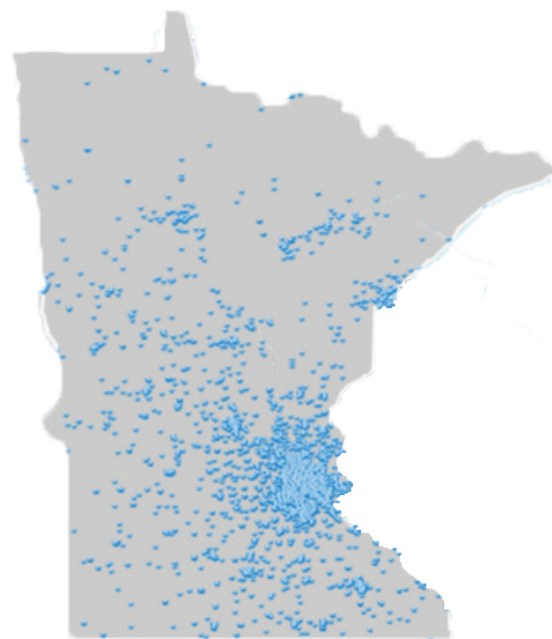

PHS has helped thousands of patients successfully transition from hospital to home. We provide care for more than **6,000 patients throughout the state of Minnesota**, and over 24,000 across Florida, Indiana, Iowa, Kansas, Kentucky, Minnesota, Missouri, Nebraska, Ohio, Texas, and Wisconsin combined.

WHO WE ARE

A comprehensive home health care provider specializing in the care of children with medical complexities.

We provide care for the whole child, including:

- Life-sustaining medical equipment and supplies
- Infusion and enteral therapy
- Home nursing services
- Pediatric specialized clinicians, trained at an ICU-level
- Extensive education program for families, health care professionals, and support caregivers

PHS AND LEO

It's not one part, it's everything. It's the equipment, the care, the medicine, the knowledge. It's the odds and ends, the communication between each department, between PHS and our doctors – which we have many doctors for Leo. It's the all-encompassing aspect of PHS that I would recommend to anyone."

– Denis, Leo's dad - Minnesota patient

LEO'S STORY

Born: 2016

Diagnosis: Infantile Pompe disease

Leo's diagnosis causes weakness and deterioration of muscles, respiratory failure, and cardiomyopathy. The early prognosis was that he would be on long-term trach care, unable to sit up on his own, and would need 24-hour nursing.

PHS has provided weekly infusion nursing, equipment & supplies, and support from a respiratory therapist and despite challenges that Pompe disease brings, Leo is thriving at home with PHS. He no longer requires a vent and has been decannulated, and now plays floor hockey in his wheelchair at school with the other kids.
