

PUBLIC WORKS BUILDING FUNDING

Public Purpose

To replace the existing Public Works building with a new facility (pictured right), providing a modern, central space for the City to store its vehicles and equipment and conduct maintenance, thereby enhancing the delivery of public services such as road repairs, infrastructure upkeep, and other community improvements.

City Action

The former Public Works facility, built in 1967, had several health and safety concerns, had failing mechanical systems that were unable to be repaired, and was too small to handle the work of the Street, Park, and Maintenance departments which were all housed there. A feasibility study conducted in 2015 showed that a new facility was needed to meet the City's needs and would be more cost effective than retro-fitting a facility 50+ years old.

Projected Schedule

January 2021 thru May 2022

Cost of Construction/Engineering

\$9.6 M
