The Honorable Gary Dahms
Ranking Minority Member, Minnesota Senate Committee on Commerce and Consumer Protection
658 Cedar Street
St. Paul, MN 55155

Re: SF 1857 – Concerns Regarding Restrictions on Minor Access to Chatbots

Dear Chair Klein, Ranking Member Dahms, and Members of the Committee:

I write to express TechNet's opposition to SF 1857, as amended, which would impose new restrictions on minors' access to chatbot technologies.

TechNet is the national, bipartisan network of technology CEOs and senior executives that promotes the growth of American innovation by advocating a targeted policy agenda at the federal and 50-state level. TechNet's diverse membership includes more than 100 dynamic American businesses ranging from startups to the most iconic companies on the planet and represents five million employees and countless customers in the fields of information technology, artificial intelligence, e-commerce, the sharing and gig economies, advanced energy, transportation, cybersecurity, venture capital, and finance.

We appreciate the author's efforts to address stakeholder concerns by refining definitions and removing the previously proposed "recreational purposes" standard. While these changes are a step in the right direction, the bill continues to raise significant concerns regarding scope, implementation, and unintended consequences.

First, even with revised definitions, the bill continues to apply broadly to general-purpose AI systems that are inherently multifunctional and context-dependent. Chatbot technologies are widely used across a range of everyday applications, including educational tools, productivity platforms, and general information services. As drafted, the bill risks sweeping in these common and beneficial uses rather than being narrowly tailored to specific high-risk applications.

TECHNET
THE VOICE OF AMERICAN INNOVATION

Second, the bill creates significant operational challenges by requiring platforms to verify user age and apply restrictions across dynamic, user-driven interactions. General-purpose AI systems cannot reliably distinguish between different types of use cases in real time, and imposing such requirements would be difficult to implement consistently across services. This creates uncertainty for both platforms and users and raises concerns about feasibility.

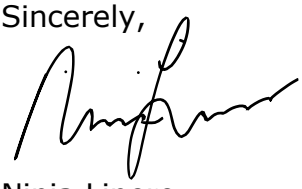

Third, the bill is not sufficiently targeted to address clearly defined harms. Instead, it establishes a broad regulatory framework that applies across a wide range of technologies without distinguishing between higher-risk and lower-risk use cases. A more effective approach would focus on narrowly defined categories of concern while preserving access to widely used tools.

Finally, the bill's enforcement structure—combined with ongoing ambiguity around compliance obligations—creates substantial legal and operational risk. Without clear, workable standards, companies may face significant liability exposure despite good-faith efforts to comply, which could discourage innovation and limit the availability of services in Minnesota.

For these reasons, we respectfully oppose SF 1857 as currently drafted. We welcome the opportunity to work with the author and the Committee to develop a more tailored approach that addresses legitimate concerns while ensuring that policies remain workable and appropriately scoped.

Thank you for your time and consideration. We welcome continued dialogue with the Committee and stand ready to be a resource as you consider these issues.

Sincerely,

Ninia Linero
Executive Director, Illinois & the Midwest
