Introduction: GIS Maps and Physical Inventory of State-Owned Lands within the Boundary Waters Canoe Area Wilderness

Geographic Information System (GIS) data layers were used to categorize DNR-administered lands within the Boundary Waters Canoe Area Wilderness based on a set of valuation criteria. DNR lands were classified into parcels, each parcel being approximately 40 acres or less. 3253 individual parcels were included in the analysis. Valuation criteria were derived from parameters used in the assessment report, and included island parcels, parcels with shoreline frontage on lakes of various size, and parcels on or adjacent to perennial streams. The proportions of uplands and wetlands were also included in the valuation – see key on following page for a detailed description of the valuation criteria.

Analytical Methods

All data used in this analysis were obtained from the Minnesota Department of Natural Resources Data Deli, www.deli.dnr.state.mn.us. The data are consistent with the State standard for projection of Datum Nad83, Zone 15, and meets State metadata standards. Analyses were conducted at the Natural Resources Geographic Information System Laboratory at the Natural Resources Research Institute using ArcInfo or ArcView GIS software.

The GIS data used for the analysis included:

30 Meter Digital Elevation Model
1:24,000 Digital Raster Graphic (digital topographic maps)
LANDSAT-derived Land Use/Land Cover
Control Point Generated Public Land Survey Records
DNR 24K Streams
DNR 24K Lakes
State Forest Roads
County State-Aid Highways
DOT Roads
Interstates and Trunk Highways

The maximum and mean slopes for each parcel were calculated using the 30 Meter Digital Elevation Model. ArcGRID was used to generate distance grids for the lake, perennial stream and road layers; these were then used to calculate the Euclidian distance from the centroid of each parcel to the nearest lake, stream, and road. To quantify landuse for each parcel, we used the LANDSAT-derived Land Use/Land Cover developed by Manitoba Remote Sensing Centre. Landuse classifications were aggregated into four categories: Wetland, Forest, Open Water, and Grassland.

Acknowledgements

Gerry Sjerven coordinated acquisition and analysis of the GIS data, and in particular worked with the MN DNR to ensure that all lands were considered. Connie Host designed and printed the map set. George Host and Lucinda Johnson provided general oversight to the project. Development of the evaluation criteria was done jointly between NRRI staff and investigators Curt Anderson and Jim Skurla.

Results

The maps and tables included with this document depict the locations, valuation categories, and source data for each of the 3253 parcels. Maps are organized by ¼ township, each showing a 3 x 3 mile block of land. A general reference map shows the location of the township within the BWCA boundary, and a township map locates the 3 x 3 mi quadrant displayed on the map. DNR parcels are identified by a Parcel-ID code, as shown in the table below. The map is underlain by a Digital Raster Graphic (georectified topographic map) showing topography, water bodies, and section numbers.

Field Identifiers and Descriptions for BWCA Valuation Table Data

Field Identifier	Description
ParcelID (Lseqky)	Identification number for mapped parcels
Land Category	Classification developed for valuation process - see Land Valuation Key
Acres	Parcel area (ac)
County	County Number: 69 = St. Louis 16 = Cook 38 = Lake
Township	Township Number
Direction	0-West, 1- East
Range	Range Number
Section	Section Number
Forty	Forty Number
Government	Number of Government Lots
Forty Description	Location of Parcel
Glotmatch	DNR index number for parcel selection
Administrator	Department that administers the parcel
Land Type	Type of Trust, Tax Forfeit, or Acquired land
% Wetlands	Percentage of Wetlands based on the Manitoba LANDSAT Classification
% Forest	Percentage of Forest types based on the Manitoba LANDSAT Classification
% Grassland	Percentage of Grassland types based on the Manitoba LANDSAT Classification
% Open Water	Percentage of Open Water based on the Manitoba LANDSAT Classification.
Shoreline (length)	Length of shoreline (linear feet per parcel)
Roads (distance to)	Distance to the nearest road (m)
Streams (distance to)	Distance to the nearest perennial stream (m)
Lakes (distance to)	Distanceto the nearest lake (m)
Slope (Maximum)	Maximum slope within parcel (deg)
Slope (Mean)	Mean slope within parcel (deg)

Land Valuation Key	
A	Parcels on an island or peninsula.
B	Parcels on a lake greater than 320 acres.
C	Parcels on lakes greater than 160 but less than or equal to 320 acres.
D	Parcels on lakes greater than 80 but less than or equal to 160 acres.
E	Parcels on lakes greater than 10 but less than or equal to 80 acres.
F	Parcels with .25 miles from a perennial stream.
G	Parcels .25 to .5 miles from a perennial stream.
H	Parcels with 50% or more wetlands.
I	Parcels not included in any of the above categories were grouped into the 'Upland' class.

NR GIS

Files for this Acrobat version of volume 3's tables and maps were sorted in the Windows file system and Adobe Acrobat insert sort defaults, and have the following inconsistencies of order not represented in the original NRRI paper copy:

- Townships have been sorted into descending township order (north to south). In the taxonomy of file names, all townships are understood to be North.
- Range numbers are inconsistently ordered as the sort order does not accommodate a 2-digit ranking. All ranges, unless otherwise designated, are understood to be West (of the Principal Meridian).
- Please use the Acrobat bookmark feature to navigate to specific locations. Again, please note this order does not represent necessarily a geographic logic but rather reflects the following file order:
