Description of the Office of the State Auditor

The Office of the State Auditor (OSA) serves as a watchdog for Minnesota taxpayers by helping to ensure financial integrity, accountability, and cost-effectiveness in local governments throughout the state.

Through financial, compliance, and special audits, the OSA oversees and ensures that local government funds are used for the purposes intended by law and that local governments hold themselves to the highest standards of financial accountability.

The OSA performs approximately 250 financial and compliance audits per year and has oversight responsibilities for over 4,300 local units of government throughout the state. The office currently maintains five divisions:

Audit Practice - conducts financial and legal compliance audits for local governments;

Pension Oversight - monitors investment, financial, and actuarial reporting for over 700 public pension funds;

Tax Increment Financing (TIF) - promotes compliance and accountability in local governments' use of TIF through financial and compliance audits;

Government Information - collects and analyzes financial information for cities, towns, counties, and special districts;

Legal - provides legal analysis and counsel to the Office and responds to outside inquiries about Minnesota local government law; as well as investigates allegations of misfeasance, malfeasance, and nonfeasance in local government.

The State Auditor serves on the State Executive Council, State Board of Investment, Land Exchange Board, Public Employee's Retirement Association Board, Minnesota Housing Finance Agency, and the Rural Finance Authority Board.

Overview

The data in this report is intended to facilitate a comparative analysis of spending by Minnesota cities. This report does not analyze whether any city is spending an appropriate amount for city services. Such evaluations can only be made after a thorough assessment of the overall spending of a particular city, the relative level of demand for services within that city, and the extent to which residents of that city demand, and are willing to finance, non-essential services.

Minnesota's truth-in-taxation requirements for local governments provide citizens with information on the proposed distribution of their property tax dollars. This information does not, however, compare different jurisdictions to one another. This report, and the presentation of this data in per capita form, allow the residents of cities with a population over 2,500 to compare their city's expenditures with other similarly sized cities. The comparisons may be used by citizens as a means to better understand the uses of their tax dollars and to hold city government accountable for management of city resources.

Comparisons of city per capita expenditures can also be useful for the cities themselves. City officials should use the comparisons as a starting point for improving efficiency, by looking at comparable cities that have lower per capita expenditures, and investigating potential techniques or ideas that could be replicated to reduce city expenditures.

When examining the following tables, it is evident that there are wide variations in the amount spent on city services. Several possible reasons exist for the wide variation in city expenditures.¹ Cities with relatively high per capita expenditures may be responding to particular circumstances such as a higher crime rate or recovery from a natural disaster. Alternatively, comparatively high per capita expenditures may be indicative of poor financial management practices by city officials.

Conversely, cities with comparatively low per capita expenditures may have opted not to provide certain services that are available in other cities, or may not be faced with the same demands for services. Cities may also appear to spend less than others if they provided services through enterprise funds or contracted with another municipality to provide a service. Alternatively, comparatively low per capita expenditures may be indicative of superior financial management practices of city officials.

Residents of individual cities need to evaluate their city's circumstances to better understand the reasons for the city's per capita expenditure patterns. To fully understand city finances, residents and city officials need to analyze the relative contributions of both management and circumstances for their city.

This report is also sorted by clusters as established by the League of Minnesota Cities. The State Auditor's Office has made the data in this report available in an interactive database on its web site. The OSA web site address is www.osa.state.mn.us.

¹ This analysis does not incorporate the finances of enterprise funds. The inclusion of enterprise fund spending could significantly affect per capita figures for certain cities. Additionally, cities that provide services to other municipalities will have higher per capita expenditures. Appendix A provides a more detailed analysis of factors that contribute to the differences in city spending.

Definitions of Categories of Expenditures and Long-Term Debt

Current General Government Expenditures. General government expenditures are those expenditures related to the administration of the governmental unit. General government expenditures include costs related to the mayor and city council, elections, finance, city hall maintenance, and supplies.

Current Public Safety Expenditures. Public safety expenditures are those expenditures that are related to the protection of people and property. The most common services in this category include police, fire, and ambulance services.

Current Streets and Highways Expenditures. Streets and highways expenditures are for the maintenance and repair of local highways, streets, bridges and related equipments. Common expenditures include patching, seal coating, and snow removal. Expenditures for road construction are not included in current expenditures, but are accounted for as capital outlay expenditures.

Current Sanitation Expenditures. Sanitation expenditures include services such as refuse collection and disposal, recycling, as well as weed and pest control. Some cities provide sanitation services through enterprise funds.

Current Health Expenditures. Health expenditures include services such as the maintenance of vital statistics, restaurant inspection, communicable disease control, and various health services and clinics.

Current Culture and Recreation Expenditures. Culture and recreation expenditures include such services as libraries, museums, swimming pools, golf courses, zoos, and parks. Many cities provide recreation services through enterprise funds, which results in low per capita expenditures for this category.

Current Housing and Economic Development Expenditures. Housing and economic development activities include development and redevelopment in blighted or otherwise economically disadvantaged areas. Activities may include: low interest loans to individuals and businesses; cleanup of hazardous sites; rehabilitation of substandard housing and other physical facilities; and assistance to those providing housing and economic opportunity within a disadvantaged area.

Current Airport Expenditures. Airport expenditures include snow plowing, runway maintenance, staff, and supplies.

Current Transit Expenditures. Transit expenditures reflect the costs associated with operating transit systems. Costs include salaries, vehicle maintenance, fuel, and administration. Several large cities operate transit authorities as enterprise funds. Because enterprise fund expenditures are not included in this report, cities with transit enterprise funds will have no expenditures for transit operations in this report.

Current Miscellaneous Expenditures. This category refers to all categories of current expenditures that do not fit into any of the above categories. Included are such things as pension contributions and insurance not allocated elsewhere, cemeteries, conservation of natural resources, judgments, and community education.

Total Current Expenditures. Total current expenditures is the total of all expenses relating to current operations.

Total Capital Outlays. Capital outlay expenditures are for the purchase of physical items that benefit the city for more than one year. These expenditures include the purchase, construction, or permanent improvement of buildings, equipment, machinery, and land. In many cases, cities try to plan for consistent capital spending from year to year to avoid large swings in spending. This is not always possible because projects such as the construction of a new building may be large in cost, but infrequent in nature.

Debt Service Expenditures. Debt service expenditures are the annual cost of servicing the outstanding debt of the city. These costs include principal, interest, and fiscal charges.

Outstanding Long-Term Debt. Outstanding long-term debt is not an expenditure, but is related to debt service expenditures. Outstanding long-term debt is debt that a city has incurred to finance its capital projects. Examples of long-term debt include various types of bonded debt as well as liabilities such as certificates of participation, long-term leases, and notes.

APPENDIX A

FACTORS INFLUENCING CITY FINANCES

This page left blank intentionally

Appendix A

Factors Influencing City Finances

The finances of cities are affected by many different factors. Some of the variation results from decisions made by city officials. Some is due to factors outside the control of the elected officials, such as a city's size, the economic status of its residents or the proximity of similar services provided elsewhere. The amount of revenue available may be influenced by rising or falling property values, the use of fee-based services, intergovernmental grants for projects, access to taconite aid, and many other factors. Expenditures may be affected by the demographic, geographic, historical or political landscape of the city. Large swings in expenditures may reflect demands caused by extraordinary weather events such as floods and tornados, high levels of snowfall, public safety events such as forest or brush fires, or large-scale investigations of high-profile crimes. Some factors have an on-going effect on city finances, while others might be one-time events.

A. Demographics

Age of Housing. In the metropolitan area, the average age of housing in a city reflects not only the probable condition of the city's infrastructure, but several other conditions as well. The League of Minnesota Cities found the average age of housing to be indicative of a variety of characteristics, including a higher relative rate of poverty, more tax exempt property, more subsidized housing, and a declining population base. Each of these factors tends to contribute to a demand for public services.

Population. Cities with larger populations face certain challenges not encountered by smaller cities. Simply dealing with large amounts of traffic is one challenge that can become very costly, depending upon the burden carried by an area's streets and highways. Large populations may also indicate high population densities that in turn are associated with higher poverty and crime rates.

Population Decline. A large loss of population can have a very significant effect upon a city's spending. The costs of a city's infrastructure and many of its services do not go down immediately when a number of city residents move away. The city must then make decisions to do without certain services or to raise the property taxes on the remaining citizens to pay for the services.

Income. Income is indirectly related to a city's ability to raise revenues. Where incomes are lower, property values may also be depressed, reducing a city's tax capacity. Poverty rates, in turn, will be higher creating greater demand for public services.

Crime Rate. Higher crime rates require a correspondingly higher level of public safety services. Cities that host sporting and other entertainment events can draw large crowds of nonresidents and create unusual public safety service demands. In addition, higher levels of poverty are also associated with the crime rate of a city and contribute to an overall greater demand for police protection. In addition to these demands, expenditures can be affected by a number of different factors, which include the number, type and use of personnel, the scope of services, and amount of shared services. In addition, the demographics and mix of facilities within the city may affect expenditures for public safety.

B. Geographic Location

Different areas of the state often operate within quite different economic environments. Just the presence of one large business or industry can impact an entire region. Declines in industries or companies that dominate local economies may result in a reduction of the tax capacity of the area. Trends in agriculture may result in lower property values and a decline in revenues for cities in regions whose economies are primarily based on agriculture. Cities located in these areas may experience difficulty raising revenues at the same time that they face higher demands for public services.

C. Revenue Sources

Tax Capacity. The amount of money any individual or entity spends is directly related to the amount that is available to spend. Likewise, the costs of doing business are directly related to the amounts of revenue that can be generated to meet the costs.

Taconite Aid. Many cities located in the “Iron Range” are eligible to receive special funding in the form of taconite aid. For a number of years, revenues in these cities were greater than they might have been without the distribution of taconite aid, especially for cities without taconite processing plants. In addition, the availability of taconite aid enabled these cities to spend without raising property taxes.

Enterprise Funds. Services provided through enterprise funds allow cities to pass the costs of services directly onto the users of the services. By using this type of accounting mechanism, cities may be able to keep down the level of general property taxes needed to provide services.

D. Shared Services, Joint Powers Agreements

A significant practice among cities is the sharing of services and the use of joint powers agreements to provide necessary services. "Joint exercise of powers" is defined in Minnesota Statutes § 471.59. Such arrangements allow cities to provide services jointly with other cities and thus pool their resources. For example, the metropolitan cities of Circle Pines, Lexington, and Centerville have a joint powers agreement to provide police protection services.

A number of cities share services through the use of contracts. For example, the City of St. Paul contracts with several other cities in Ramsey County for the provision of water. The City of St. Anthony contracts with Falcon Heights and Lauderdale to provide police protection. In Greater Minnesota, the City of Thief River Falls provides fire services to five townships on a contractual basis.

Shared service arrangements are not necessarily formal; some cities provide services to other jurisdictions on an informal basis. By sharing the costs of services, cities can achieve greater economies of scale and avoid duplicating services and capital investments. Cities that provide a service to a number of entities may show higher expenditures for that service, but will have these costs defrayed by fees provided by the other participating entities.

E. Proximity to County, Regional, or State-Run Programs/Facilities

Cities that are located near county, regional or state-run facilities may decide to have their citizens take advantage of those facilities and services rather than provide them on their own. For example, the city that houses the county library probably won't build their own. Similarly, cities located close to a regional or state park may opt not to develop or expand their own park program. Smaller cities located near larger cities may do the same.

The degree of isolation experienced by a community, whether geographic or technological (e.g., lack of advanced telecommunications capability), can also affect service demands and costs. Cities that are remote from other communities may not have the opportunity to participate in joint powers arrangements or have access to urban amenities, and thus may need to provide a wider range of services out of their own budgets.

F. Types of Industry Present and Service Demands

One factor that can have a significant effect on an individual city's situation is the type of industry present in the city. For example, industries such as paper mills may place particularly heavy burdens on the city's water supply, sewers, fire department, or streets. At the same time, the presence of these industries contributes to the property tax base of the city. Expenditures for these services may be higher than for other cities, but the cost is not necessarily borne by the residents of the city.

G. Source of Labor

Numerous factors can impact local governments' levels of expenditures for labor. Use of part-time employees, reliance on volunteers, unionization of workers, retention of workers, and use of independent contractors for specific projects or general services can all effect the salary and fringe benefit costs paid by local governments.

H. Other Factors

The effects of weather and natural disasters can significantly affect the expenditures for certain services over a period of time. Cities affected by floods and tornadoes may have higher public safety, streets and highways, and other infrastructure costs. During winters in which there is an unusually high snow fall, cities may have increased expenditures for snow removal. There are many other incidental factors not included in this list. Explanations of differences in city expenditures should be pursued with city officials.

**RECENT REPORTS FROM THE OFFICE OF THE STATE AUDITOR
GOVERNMENT INFORMATION DIVISION**

ANNUAL REPORTS:

! *Revenues, Expenditures and Debt of Minnesota Cities Over 2,500 in Population December 31, 2001*

This annual report lists the sources and amounts of revenues, expenditures and outstanding debt for Minnesota cities over 2,500 in population during the most recent year. It also examines enterprise operations and the fund balances for the general and special revenue funds. January 2003

! *Ranking of 2001 Per Capita Expenditures of Cities Over 2,500 in Population*

This annual report compares the per capita expenditures and debt of cities over 2,500 in population. January 2003

! *Legal Costs Survey - July 2000 through June 2001*

This annual report details the expenditure of public funds for legal services incurred to defend all counties, cities of the first, second, and third class, and school districts with enrollment exceeding 100 students, from lawsuits and amounts paid in voluntary settlements or judgements in any lawsuit. November 2002

! *2001 Local Government Lobbying Expenditures*

This annual report lists what local governments spend to lobby the Legislature and agencies of the state administration. October 2002

! *Ranking of 2000 Per Capita Expenditures and Long-Term Debt - Counties - for the Year Ending December 31, 2000*

This annual report ranks counties on the 10 current expenditure categories, total capital outlay and total debt service expenditures by both dollar amount and per capita dollar amount. It also ranks counties on outstanding long-term debt by both dollar amount and per capita dollar amount. September 2002

! *Revenues, Expenditures and Debt of Minnesota Counties December 31, 2000*

This annual report lists the sources and audited amounts of revenues, expenditures and debt for Minnesota counties during the most recent fiscal year. It includes analysis of counties' enterprise operations and the fund balances for the general and special revenue funds. September 2002

! *2002 Budget Data for Minnesota Counties Together With 2001 Revised Budgets*

This annual report analyzes the unaudited revenues and expenditures budgeted for 2002 by county. It includes comparisons with 2001 budget data. September 2002.

! *2001 Criminal Forfeitures in the State of Minnesota*

This annual report describes the amount of property and cash seized by law enforcement agents in 2000 criminal forfeitures and what happens to the forfeited items. September 2002

! *2002 Budget Data Together With 2001 Revised Budget Data - Cities Over 2,500 in Population*

This annual report analyzes the unaudited revenues and expenditures budgeted for 2002 by cities over 2,500 in population. It includes comparisons with 2001 budget data. August 2002

! *Revenues, Expenditures and Debt of Minnesota Cities Under 2,500 in Population December 31, 2000*

This annual report lists the sources and amounts of revenues, expenditures and outstanding debt for Minnesota cities under 2,500 in population during the most recent year. It also examines enterprise operations. July 2002.

! *An Analysis of Minnesota's Municipal Liquor Store Operations in 2000*

This annual report details the sales and profits of Minnesota's municipally-owned and operated liquor stores. April 2002

! *Revenues, Expenditures and Debt of the Towns in Minnesota December 31, 2000*

This annual report lists the sources and amounts of revenues, expenditures and outstanding debt for Minnesota towns for the most recent fiscal year. April 2002

! *2000 Budget Data Together With 1999 Revised Budget Data - Cities Under 2,500 in Population*

This annual report analyzes the unaudited revenues and expenditures budgeted for 2000 by cities under 2,500 in population. It includes comparisons with 1999 budget data. October 2000

If you are interested in one of these recent reports, they are available on our web site at www.osa.state.mn.us. You can also call our office at (651) 297-3688 or email us at gid@osa.state.mn.us to request a copy of the report.
