The total cost of preparing the Report on 2003 SCORE Programs was \$30,000, including staff time, writing, editing, and printing.

The OEA is reducing printing and mailing costs by using the Internet to distribute reports and information to a wider audience. For additional information on recycling, waste prevention and waste management, check out the OEA's web site: www.moea.state.mn.us/score/

This report was printed on recycled paper manufactured without the use of elemental chlorine (cover: 30% post-consumer; body: 100% post-consumer).

Introduction

The *Report on 2003 SCORE Programs* summarizes Minnesota's waste generation and recycling data for calendar year 2003. The report also provides details about waste-related efforts around the state, such as waste reduction activities, recycling, household hazardous waste and problem materials management, and the costs associated with these activities. This year's report has been streamlined and integrated with the OEA's web site (www.moea.state.mn.us/lc/score.cfm) to provide its primary audience (counties, cities, and elected officials) with a summary of key findings and links to more detailed data and information online.

The SCORE Program

Minnesota's statewide recycling efforts began in earnest in 1989, when the Legislature adopted comprehensive legislation based on the recommendations of the *Governor's Select Committee on Recycling and the Environment*. This set of laws, commonly referred to as SCORE, initiated a stable source of state funding for programs for recycling, as well as waste reduction and the improved management of household hazardous wastes and problem materials. The legislation, SCORE dollars, and revenue from counties and local government provide the basis for programs that are long-term and flexible within the scope of waste reduction, recycling, and problem materials management. These programs directly contribute to Minnesota's economic health through Minnesota's value-added recycling manufacturing industry, which has created more than 9,000 jobs and provided nearly \$64 million in annual tax revenues. These jobs, in turn, support another 10,000-plus people in indirect and induced jobs. Altogether, the recycling industry pays an estimated \$760 million in wages and adds \$2.98 billion to the state's economy. Significantly, while many sectors of the state lost jobs in 2001-2003, the recycling industry showed a 3.4 percent gain in employment, adding over 300 jobs. For more information on how recycling helps the state's economy, visit OEA's web site: www.moea.state.mn.us/market/valueadded.cfm.

Analyzing the data

Data for this *Report on 2003 SCORE Programs* were collected from all 87 counties in Minnesota and the Western Lake Superior Sanitary District (WLSSD)¹ using the annual SCORE survey. County solid waste staff members provide details on local programs for solid waste management and recycling.

The OEA uses the information from these county reports to calculate the state's recycling rates, the cost of managing waste and recycling, and to detail trends in waste generation and disposal. While data collection began in 1989, the OEA typically uses calendar year 1991 as a baseline for trend analysis. In 1991, counties began collecting data on a calendar year basis, instead of a fiscal year basis, and by that point, data collection and format had greatly improved, making the quality of the data that much better.

MSW Generation in Minnesota

Since the state first collected SCORE data in 1989, Minnesota has shown a steady growth in municipal solid waste (MSW), reflected in both the total amount of MSW generated and in the per capita figures.

Mixed MSW is defined by statute as "garbage, refuse, and other solid waste from residential, commercial, industrial, and community activities that the generator of the waste aggregates for collection." It includes common materials found in household and commercial garbage such as packaging materials, containers, food discards, and other compostable materials, plastic, paper, etc. Municipal solid waste does *not* include auto hulks, street sweepings, ash, construction debris, mining waste, sludges, tree and agricultural wastes, tires, lead

¹ WLSSD is a special-purpose subdivision of the state that is charged with addressing water pollution, solid waste collection, and disposal of sewage. WLSSD, established in 1971, covers nearly 500 square miles in St. Louis County, and includes the cities of Duluth, Cloquet, Carlton, Scanlon, Wrenshall, Hermantown, Proctor, and Thompson. It coordinates programs for nearly 115,000 people in the region.

acid batteries, motor and vehicle fluids and filters, and other materials collected, processed, and disposed of as separate waste streams (Minn. Stat. § 115A.03, subd. 20).

Total generation of the state's municipal solid waste includes wastes recycled, discarded (including tons sent to disposal and resource recovery facilities), and tons disposed of on-site (burn barrels or farm dumps).

Totals and trends

Minnesota MSW generation totaled 5,933,427 tons in 2003. Statewide, this represents a one percent increase over the previous year. This is particularly noteworthy given that it is the smallest increase in MSW generation since the inception of SCORE. Since 1991, MSW generation has grown on average by 3.6 percent per year. Significantly, after the period of biggest growth (1989-1997), the average increase in MSW generation has dropped to 2.3 percent over the past six years (1998-2003).

While improvement in waste reduction techniques and efforts may account for some of this decline, waste generation can be expected to decrease during times of economic recession.

As in 2002, 41 percent of the state's MSW generation came from counties in Greater Minnesota and 59 percent came from counties in the seven-county Metropolitan Area.

Figure 1: Minnesota MSW generation

Total generation: 5,933,427 tons

For 2002-2003, the amount of MSW generated in Minnesota increased by 1%, while population increased by 1.1%

That's 2,332 pounds of waste and recyclable materials for every person in the state.

									Changes	1991-2003
	1991	1997	1998	1999	2000	2001	2002	2003	MSW	Population
Greater Minnesota	1.54	1.96	2.07	2.14	2.21	2.32	2.39	2.42	57.6%	11.9%
Metropolitan Area	2.37	3.05	3.22	3.30	3.42	3.42	3.49	3.51	48.5%	18.2%
Minnesota	3.90	5.00	5.29	5.44	5.63	5.74	5.88	5.93	52.0%	15.2%

For full data for 1991-2003, refer to Appendices.

Per capita MSW generation

Another way the OEA evaluates MSW growth is on a per capita basis. By dividing the state's total generation of waste by the state's population, OEA calculates the amount of waste that the "average" Minnesotan creates each year in an attempt to understand if waste growth is coming primarily from an increase in population or increases in consumption.

Similar to the small increase in overall MSW generation noted above, we find, for the first time since SCORE data has been collected, a decrease in per-capita MSW generation. In 2003, the per-capita rate was 1.167 tons. a decrease of 0.13 percent. Although this decrease may seem minimal, it becomes significant when put into context with the past trend—over the past 14 plus years of SCORE data collection, per-capita MSW growth has increased, on average, by 2.3 percent annually and has never been less than 1 percent.

Recycling and Waste Reduction

The heart of SCORE is Minnesota's recycling efforts, and Minnesota's programs are among the nation's most successful. In 2003, Minnesota's recycling rate (including credits for yard waste recycling and waste reduction efforts) has held steady from 2001 and 2002 at 46.5 percent, continuing to place the state among the top ten in the nation according to *Biocycle* magazine's annual survey. The state's base recycling rate (which is the actual percentage of materials recycled and does not include the additional source reduction and vard waste credits) is 39.2 percent, virtually unchanged from 2002 but up a small amount and matching levels observed in 2000.

In 2003, recycling programs in Minnesota collected over 2.3 million tons of recyclable materials (paper, metals, glass, plastic, food, problem materials, and more), an increase of 28,000 tons, or 1.2 percent, from the previous year. Since 1991, the tons of materials collected for recycling in Minnesota have nearly doubled, growing by 95 percent, and the statewide recycling rate has increased by 10.5 percentage points.

50% 47.0% Metropolitan Area 46.7% Greater Minnesota 46.5% Statewide Recycling rates (percent) 40% Since the SCORE legislation was enacted in 1989, Minnesota's 30% statewide recycling rate has climbed by 24 percentage points. 20% 2003

1995

1996

1997

1998

As in past years, the percent breakout of commercial and residential recycling is unchanged: commercial tonnages account for 75 percent of the total collected and processed and residential tonnages account for 25 percent of the total.

1999

The environmental and economic benefits of recycling

Recycling is important in Minnesota—both environmentally and economically. The National Recycling Coalition's (NRC) "environmental benefits calculator" estimates environmental benefits based on the tons of

1991

1992

1993

specified materials recycled, landfilled, and incinerated in a particular geographic region. The Recycling Association of Minnesota (RAM) worked with this model to calculate the benefits for Minnesota's recycling efforts using the 2003 SCORE data. For a complete breakout of quantified benefits like energy conservation, greenhouse gas savings, resource savings, and reduced air and water emissions, go to www.moea.state.mn.us/lc/score.cfm.

In addition to recycling's environmental benefits, recycling industries make a substantial contribution to the state's economy. Minnesota's recycling manufacturers contribute an estimated \$2.98 billion to the state's economy, supporting nearly 20,000 jobs in total. In addition to the contributions of these value-added manufacturers, there is economic value related to collecting, processing, and marketing recyclables in Minnesota (which is supported by SCORE dollars). Further information is available in OEA's *Minnesota's Recycling Industries: Economic Activity Summary:* www.moea.state.mn.us/market/economic.cfm. The information in the study is part of the U.S. Recycling Economic Information Study, with cooperation from the U.S. EPA, the National Recycling Coalition, and 16 other states.

Waste and toxicity reduction

Preventing waste at its source is at the top of the waste management hierarchy because it is the most beneficial waste management strategy, both economically and environmentally. Waste that is prevented at its source does not need to be managed or recycled, which means fewer costs and less pollution from transporting, recycling, processing, or landfilling wastes, in addition to the significant benefits associated with manufacturing and distributing goods and materials made with recycled content.

While various factors including pollution and waste prevention techniques as well as economic conditions affect the rate of overall MSW growth, state, county, and city governments must continue to address the significant cost of removing toxic materials from the waste stream. In 2003, the state's HHW program was transferred from the Pollution Control Agency to the OEA. The OEA continues to work with local HHW facilities, manufacturers, and the general public to reduce problem material generation through education, reuse, recycling, Design for the Environment (DfE), and product stewardship partnerships.

MSW Processing and Disposal

In 2003, waste that was not recycled or prevented/reduced and, therefore, must be disposed of, totaled over 3.6 million tons. These tons, which increased by nearly 1 percent from 2002, include waste disposed of or processed, as well as estimates for on-site disposal and problem materials not recycled.

In Minnesota, waste is managed through four main methods: landfills, waste processing/resource recovery facilities, source-separated composting, and on-site disposal.

Trends in waste disposal

Waste management in Minnesota is guided by a hierarchy that prioritizes waste reduction, recycling/composting, and resource recovery. During 2003, source-separated

Figure 3: MSW Disposal and Processing in Minnesota, 2003

		Change 2002-03
Landfill	60.0%	2.7%
Waste-to-Energy	34.0%	(2.6%)

On-site Disposal (est.)	2.2%	(1.8%)
MSW Compost	0.4%	7.5%
Source-separated compost	0.1%	40.7%

Percentages of total waste disposal, excluding recycling. Decreases indicated by parentheses (x%).

composting had the largest increase of over 40 percent, followed by MSW composting at 7 percent. The amount of waste sent to landfills—the least-preferred disposal option—increased by nearly 3 percent (61,000 tons). The declines in the area of disposal/processing came from on-site disposal (estimates from county staff on the level of on-site dumping and burning that occur), which declined by 1.8 percent, and waste-to-energy,

which declined by 2.6% percent. Since reaching its highest level in 1993 at just over 1.5 million tons, resource recovery has declined as a percent of overall disposal/processing methods by 22 percent in the last 10 years. In addition to working with existing facilities to increase capacity and provide ongoing operational technical assistance, the OEA began providing assistance in 2003 to a potential new resource recovery facility that may be located in Lamberton, Minn., and serve 9 counties in southwest Minnesota.

Funding of SCORE Programs

Minnesota boasts one of the best recycling rates in the nation due to the level of participation by our citizens and businesses, along with comprehensive recycling programs at the city and county levels—programs funded by local government and state revenues. In 2003, Minnesota counties spent over \$49 million for SCORE-related programs, an increase of over \$2.5 million, or 5 percent, from 2002.

Continued funding commitments from the Legislature and significant investments at the local level provide the funding these programs require.

^{*} Unknown destination waste totals were only reported during the early years of SCORE (1989-1994).

State funding: SCORE block grants

From the inception of SCORE, state tax revenue has provided a stable funding source for recycling and waste reduction programs. Money from the state is passed on to the county level in the form of annual block grants. The OEA disbursed \$11.2 million in SCORE block grants to eligible counties in CY2003, a reduction of roughly \$1.5 million from CY2002.

This 11.5 percent reduction in CY2003 SCORE grant dollars stems from a general revenue unallotment enacted by the Governor in February 2003. However, unlike the permanent ten percent reduction enacted by the Legislature in CY2002 which reduced the total SCORE grant dollars from \$14.1 million to \$12.6 million, the unallotted \$1.5 million in CY2003 was a one-time reduction in SCORE grant funds. In CY2004, SCORE grants again totaled over \$12.5 million, though still \$1.6 million per year shy of previous years' funding levels (CY1992-2001).

Within certain guidelines, counties have broad discretion in determining how to spend SCORE block grants and local matching funds, which gives them flexibility to develop programs that best meet local needs. The OEA monitors the county use of SCORE grants to ensure they are used to fund SCORE-eligible programs: source reduction, recycling, market development, management of problem materials, waste education, litter prevention, technical assistance to ensure proper solid waste management, and waste processing (Minn. Stat. § 115A.55).

Despite the economic value of the recycling industry to the state's economy, Minnesota's recycling infrastructure faces challenges. Some counties are dealing with budget reductions by closing down recycling centers or limiting the types of materials they collect. Plastic and glass recycling have been eliminated in some communities. Rural recycling programs, in particular, are facing more obstacles in getting materials to distant markets. The OEA continues to explore ways to better support county recycling programs and secondary markets, recover more recyclable and organic material from the waste stream, and identify more opportunities to reduce, reuse, and recycle in the manufacturing and business sectors. OEA's strategic objective is to continue efforts to expand Minnesota's secondary markets, increase recycling employment to 9,600 jobs, and grow the industry overall by 20 percent in the next ten years.

County funding

Between 1993 and 2003, overall SCORE expenditures have increased by 20 percent. These increases have been funded entirely at the local level by counties and cities through use of general revenue, special assessments, or other sources of revenue.

Each county is required to match the funding from the Legislature with a local contribution of at least 25 percent. In 2003, counties exceeded this match by 11 times, spending over \$35 million of county funds toward SCORE-related activities. This investment is in addition to undocumented dollars spent by other local units of government such as cities and townships on programs such as recycling, household hazardous waste, and waste education.

Figure 5 indicates this trend and shows the continued reliance on local dollars to fund reduction, recycling, HHW, and other SCORE programs.

Figure 5: SCORE expenditures (millions of dollars)

	1991	1996	1997	1998	1999	2000	2001	2002	2003	Change 2002-03

Recycling rates by county, 2003

Minnesota Waste Generation, 1991-2003

Statewide generation (2003): 5,933,427 tons

Minnesota recycling rates, 1991-2003

Recycling rate includes credits up to a maximum of 5% for yard waste and 3% for source reduction.
