Executive Summary

In its recent report on Minnesota higher education, the Citizens League's first recommendation is to aim for all citizens to achieve at least two years of post-secondary education. The second is to make sure that every high school graduate is ready and able to succeed in college.¹ Both high schools and colleges need to work together on this agenda.

To encourage conversations about preparation for college, the Minnesota Legislature requires the University of Minnesota and Minnesota State Colleges and Universities to report data on recent public high school graduates who take remedial (or developmental) courses in these two public systems. This report is the summary report which is transmitted to the Minnesota Department of Education and to the superintendents of all Minnesota school districts. In a separate report, each superintendent receives data on individual graduates from the district who took developmental courses so that school staff can look for opportunities to improve their educational programs.

Data in the report follow students from the high school classes of 2000, 2001, and 2002 for two years after high school graduation. One year of developmental course-taking data is available for graduates of the class of 2003.

Developmental Courses Taken by 2002 Minnesota Public High School Graduates

Within two years of high school graduation, 49 percent of the class of 2002 enrolled in a Minnesota public higher education institution. Of these public higher education students, 36 percent took one or more developmental courses during that period.

Minnesota Public High School Class of 2002 Graduates Who Enrolled in Minnesota Public Higher Education and Took Developmental Courses within Two Years of Graduation	
Percent of graduates who attended public higher education that took at least one course	36%
One course	20%
Two courses	9%
Three or more courses	8%
Any mathematics	28%
Any writing	14%
Any reading	9%
Of graduates who enrolled in University of Minnesota (any campus)	8%
Of graduates who enrolled in a two-year community or technical college	46%
Of graduates who enrolled in a four-year state university	29%

Sources: University of Minnesota, Office of Institutional Research and Reporting and Minnesota State Colleges and Universities, Research and Planning

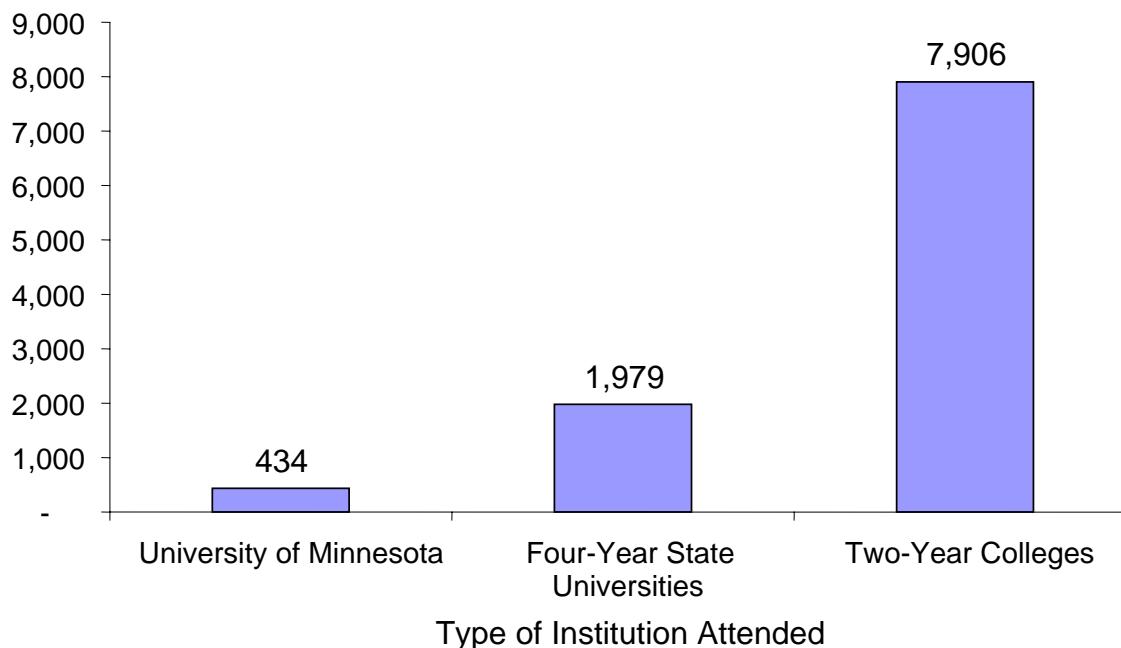

¹ Citizens League, *Trouble On The Horizon: Growing Demands And Competition, Limited Resources, & Changing Demographics In Higher Education* (November, 2004).

Most students who enrolled in developmental courses took only one course. However, 8 percent of the class attending public higher education took three or more courses.

Mathematics is the most common developmental course taken, followed by writing and then reading. Twenty-eight percent of the 2002 graduates enrolled in developmental mathematics either alone or in combination with other skill areas; 17 percent—or nearly half of the students in developmental education—enrolled only in mathematics courses.

Developmental enrollments are concentrated in Minnesota State Colleges and Universities, particularly in the two-year colleges. Of the 10,131 graduates who enrolled in developmental courses, 96 percent attended an institution within Minnesota State Colleges and Universities; 78 percent attended a two-year community or technical college. With their mission to admit all high school graduates, two-year public colleges enrolled 46 percent of their entering students from the class of 2002 in developmental courses.

Public Institutions Attended by 2002 High School Graduates Who Enrolled in Developmental Courses Within Two Years of Graduation

Recent Trends

Comparable data on developmental course-taking among recent high school graduates exists for the classes of 1999, 2000, 2001, and 2002. For the class of 1999, 33 percent of the public higher education students took a developmental course within two years of graduation. For the classes of 2001 and 2002, that percentage rose to 36 percent.

One possible reason for this change: More high school graduates, especially students who did not look ahead to college, are enrolling in post-secondary education. From 1999 to 2002, two year enrollment rates in public higher education ranged from 45 percent for the Class of 2000 to 49 percent for the Class of 2002.

At Minnesota State Colleges and Universities, more thorough placement testing and enforcement of required enrollment in developmental education account for at least some of this increase. The percentages of recent high school graduates who enrolled in developmental courses increased in both two-year colleges and four-year state universities.

The percentage of graduates taking developmental courses dropped at the University of Minnesota, which stopped offering developmental reading in 2000.

Implications for High Schools and Higher Education

For high schools:

- Mathematics continues to enroll the majority of students in developmental education. Efforts to improve mathematics achievement can have the biggest payoff in terms of helping students avoid the need to take developmental courses.
- Data on individual district graduates, provided to school districts in a separate document, can be examined to learn more about the high school experience of students who enrolled in developmental education.
- Admission to the University of Minnesota and the four-year state universities is becoming more selective. Students who need developmental education may increasingly find they cannot start at a four-year public institution.
- Teachers and students need to understand that, while community and technical colleges admit all high school graduates, students who are not prepared for college-level work will have to take developmental courses that do not count toward a certificate, diploma or a degree.

For colleges and universities:

- Because most developmental enrollments are in Minnesota State Colleges and Universities, institutions in that system and the Office of the Chancellor bear the most responsibility for working with high schools to improve preparation for college.

Overview of Developmental Programs in Minnesota Public Higher Education

All Minnesota public higher education institutions offer some developmental courses. Two-year colleges offer the most extensive developmental programs because they admit all high school graduates and enroll more students who need assistance than the four-year state universities and the University of Minnesota that have selective admissions policies. Minnesota's provision of developmental education is typical in the United States.

Virtually all University of Minnesota developmental courses are in mathematics. Minnesota State Colleges and Universities offer developmental education in mathematics, writing, reading, English as a Second Language, and study skills/miscellaneous topics.

Institutions use a variety of methods to identify students who need developmental courses. University of Minnesota campuses, which advise but do not require students to enroll in developmental mathematics, generally use the ACT assessment along with other measures. Minnesota State Colleges and Universities require most students to complete an incoming student assessment that includes basic measures of reading comprehension, writing, and mathematics on system-endorsed tests. Students can be required to complete developmental courses before they enroll in general education classes.

Getting Prepared for College: A Shared Agenda

More than ever, high schools and colleges are working together to get students ready for college. After all, most Minnesota high school students will go on to post-secondary education.² But too often, new high school graduates first must enroll in remedial or developmental courses because they are not prepared to meet the academic expectations of college-level programs.

While there are many reasons students may need remedial instruction, the extent and nature of enrollments by recent high school graduates can indicate ways in which there is a mismatch between high school and post-secondary education. To assist school districts in preparing young people for college, Minnesota public post-secondary systems are required to report data on recent high school graduates who enroll in their remedial or developmental courses.

This report is one of many efforts to bridge the gaps between high school and post-secondary education. It can contribute to broader conversations about changes in K-12 and post-secondary education that can make the transition successful for more Minnesota students.

About this Report

This report contains:

- A state-level summary of recent public high school graduates who took remedial or developmental courses at Minnesota State Colleges and Universities or the University of Minnesota within two years after graduation.
- For each public high school, summary information on the numbers of graduates from that school who enrolled in remedial or developmental courses.

In separate reports, each school superintendent receives detailed information about individual graduates from the district who took developmental courses. This information can be analyzed by school staff to suggest ways to improve their students' preparation for college.

Three earlier sets of reports were issued in 1997, 2001, and 2002.

Legislative Mandate

Minnesota State Colleges and Universities and the University of Minnesota are required by state law to submit this summary report to the Department of Education. The department is

² An estimated 65 percent of 2002-03 Minnesota high school graduates enrolled in a Minnesota or out-of-state post-secondary institution in fall 2003 (Minnesota Higher Education Services Office). Seventy-eight percent of the 25 to 34 year old high school graduates in Minnesota have attended college at some point (U.S. Census Bureau).

required to evaluate the data and report its findings to the education committees of the Legislature. (*Minnesota Statutes* 13.32, subdivisions 3 and 6).

In addition, the two public higher education systems are directed by law to report to school districts on the individual academic performance of their recent high school graduates who receive developmental or remedial instruction. Minnesota statutes permit the public post-secondary systems to disclose personally identifiable information about students in these reports. Access to individual student information provided to the districts is restricted by state and federal data privacy laws.

Development Education In Minnesota Public Higher Education

What is remedial/developmental education?

Developmental or remedial education³ encompasses both formal coursework and academic support services for students who need help in meeting the academic requirements of the college-level curriculum.

Following the legislative mandate for reporting on remedial instruction, the contents of this report focus on students who registered for remedial or developmental courses.

Developmental courses and services provide basic academic skills necessary for successful college-level study and generally are in the areas of reading, writing, mathematics, study skills and English as a Second Language. The courses carry college credit for financial aid and athletic eligibility purposes, but may not be used to meet requirements for a diploma, certificate or degree. Developmental courses typically are taken early in a student's college career.

In addition to formal remedial/developmental courses, most institutions offer academic support programs such as learning centers, supplemental instruction, tutoring and advising. Often these programs assist all students who request help, including many students who are performing well in college.

Why is developmental education necessary?

Developmental instruction expands access to higher education for students who have the ability to succeed in college, but need extra help to improve their basic skills. All Minnesota public institutions admit some students who need developmental instruction.

Some students take developmental courses because they have not taken the necessary coursework in high school. Other students, who have taken recommended high school

³ In this report, both "remedial" education and "developmental" education are used to refer to academic programs in post-secondary institutions that prepare students for college-level work as defined by the institutions. "Remedial education," the term used in *Minnesota Statutes* 13.32, can refer specifically to education which repeats material taught earlier that the student did not learn adequately the first time. For some educators, "developmental education" is a broader term that encompasses education that the student may need for any reason, including the failure to take college preparatory classes while in high school.

courses, may still need development education, based on placement exam results. Some of these students have been out of high school for a number of years and lost skills they once had mastered.

Which institutions provide developmental education?

All Minnesota public post-secondary institutions offered at least one developmental mathematics, reading or writing course in 2003. In 2000, the most current national information available, 92 percent of the public freshman-admitting institutions in the nation offered at least one developmental course.

Developmental/Remedial Course Offerings Minnesota and U. S. Public Post-secondary Degree-Granting Institutions					
Institution Type	Number of Institutions	Percent of Institutions that Offer Developmental Courses in:			
		Math, writing or reading	Mathematics	Writing	Reading
All Minnesota Public Institutions	41	100%	100%	80%	78%
University of Minnesota	4	100%	100%	0%	0%
Two-Year Colleges	30	100%	100%	97%	93%
Four-Year State Universities	7	100%	100%	57%	57%
U. S. Public, Degree-Granting Institutions that Enroll Freshmen	1,660	92 %	90 %	86 %	80 %
Public Two-Year	1,080	98 %	97 %	96 %	96 %
Public Four-Year	580	80 %	78 %	67 %	49 %

Sources: University of Minnesota, Office of Institutional Research and Reporting and Minnesota State Colleges and Universities, Research and Planning; U.S. Institutions that enrolled freshmen: National Center for Education Statistics, Fall 2003 data.

How does an institution's mission affect its developmental education programs?

Two-year public colleges offer the most extensive array of developmental courses and academic support services. In addition to other purposes, these institutions have the mission of providing open admission to students who might need improvement in reading, writing and mathematics. Developmental instruction in these areas is necessary to prepare students for vocational or technical programs or for transfer to baccalaureate institutions.

Universities with the mission of offering baccalaureate and graduate degrees offer fewer developmental courses. These institutions are selective in their admissions, and as a group,

entering students are better prepared for college-level work than entering students at institutions with “open admissions” policies. All University of Minnesota campuses and state universities offer developmental courses in mathematics; some state universities also offer developmental courses in writing and reading.

How do institutions identify students who need developmental education?

All Minnesota public post-secondary institutions use tests, often combined with other measures, to determine student need for developmental education.

- **University of Minnesota** campuses use the ACT Assessment mathematics subscore, in combination with other placement tests or measures, to advise students on their initial mathematics course placement. Students are not required to take developmental courses.
- **Minnesota State Colleges and Universities** use the following College Board tests to assess college readiness of admitted students in the areas of reading, writing, and mathematics: Computerized Placement Tests (ACCUPLACER), Descriptive Tests of Language Ability, and The Descriptive Tests of Mathematical Ability. At this time, institutions establish their own placement standards based on the skill expectations of the faculty teaching the college level curriculum.

Current policy calls for both mandatory assessment and placement of students based on students' assessment test results. At both the colleges and universities, students meeting exemption criteria are not required to take assessment tests. State universities take ACT Assessment results into account when determining whether students need to take institutional placement tests.

Changes in placement practices—both placement cut-off scores and registration policies—will affect the numbers of students who take developmental courses, even if the college readiness of high school graduates does not change.

State-Level Summary Information on Recent High School Graduates in Public Higher Education

Tables in this section are drawn from the high school class of 2002, the latest high school class for which post-secondary course registration data are available for two years following their high school graduation. Detailed tables follow with two years of data on the classes of 2000, 2001 and 2002 and one year of data on the class of 2003.

Enrollment data cannot distinguish the reasons that graduates took developmental/remedial courses. They may have been placed, counseled or elected to take these courses. Nearly all students who enroll, however, have been judged to need developmental assistance to do well in college. Students who were advised, but not required, to register for a developmental course are not reflected in this report if they chose not to take it.

How many recent high school graduates enroll in public higher education?

By the time they had been out of high school for two years, 49 percent of the class of 2002 enrolled in a Minnesota public higher education institution. Most of these students entered one of the institutions within Minnesota State Colleges and Universities. Two-year community and technical colleges enrolled 30 percent of the high school class of 2002, the largest share.

How many recent high school graduates take developmental courses?

All together, 36 percent of the class of 2002 who enrolled in a Minnesota public higher education institution within two years took one or more developmental courses. By and large, they took a single developmental course, most likely in mathematics. Sixteen percent, however, took two or more courses. Only 3 percent took as many as four courses.

Students who enroll in Minnesota State Colleges and Universities are much more likely to take developmental courses than University of Minnesota students:

- Forty-six percent of the community and technical college students from the class of 2002 took a developmental course; 29 percent of the students state university students did so.
- At the University of Minnesota, 8 percent of the class members were in developmental courses during the first two years following graduation.

2002 Minnesota Public High School Graduates Enrolled in Minnesota Public Higher Education Within Two Years Who Took Developmental Courses							
Minnesota Public Higher Education Institutions	% of 2002 Graduates Enrolled in These Institutions	% of Graduates Enrolled in These Institutions Who Took:			% of Developmental Credits Taken By Subject Area:		
		One or More (Any) Developmental Courses	Two or More Developmental Courses	Math	Writing	Other Subject Areas	
All	49%	36%	16%	56%	24%	20%	
University of Minnesota	9%	8%	2%	99%	0%	1%	
Minnesota State Colleges and Universities (any)	40%	42%	20%	55%	25%	20%	
Two-Year Colleges	30%	46%	24%	51%	27%	22%	
State Universities	12%	29%	3%	82%	12%	5%	

Note: Students who attended both a two-year college and a four-year state university counted only once in total percentage who enrolled in the Minnesota State Colleges and Universities system

Sources: University of Minnesota, Office of Institutional Research and Reporting and Minnesota State Colleges and Universities, Research and Planning

Of the 10,131 graduates who enrolled in developmental courses, 96 percent attended an institution within Minnesota State Colleges and Universities; 78 percent attended a two-year community or technical college.

Is the need for developmental education increasing or decreasing?

Minnesota investments in K-12 standards and school reform should pay off with diminished need for developmental instruction when students get to college. Recent data on developmental course-taking, however, cannot confirm what effects school changes are having on college readiness.

Data using the current methodology are available starting with the high school class of 1999.⁴ In the two years following their graduation, 33 percent of the class of 1999 students who entered Minnesota public higher education institutions enrolled in at least one developmental course. Comparable rates for the classes of 2000-2002 show a slight increase in this rate, with a drop in the percentage at the University of Minnesota offset by increases in the rates at Minnesota State Colleges and Universities. Increases in the percentages of students enrolling in developmental courses, however, do not necessarily mean that the college readiness of new high school graduates has dropped.

Percent of 1999-2003 Minnesota Public High School Graduates Enrolled in Minnesota Public Higher Education Institutions Who Took at Least One Developmental Course Within Two Years of High School Graduation					
Minnesota Public Higher Education Institutions	High School Class				
	1999	2000	2001	2002	2003 (One Year Only)
All	33%	34%	36%	36%	35%
University of Minnesota	15%	15%	11%	8%	7%
Minnesota State Colleges and Universities (any)	37%	39%	41%	42%	42%
Two-Year Colleges	43%	44%	45%	46%	48%
State Universities	21%	23%	27%	29%	28%

Sources: University of Minnesota, Office of Institutional Research and Reporting and Minnesota State Colleges and Universities, Research and Planning

One reason for the change in developmental course-taking could be that more students are choosing to go to college. From 1999 to 2002, two-year enrollment rates in public higher

⁴ Remedial education enrollments for two years following the graduation of the class of 1999 were reported in the 2002 *Getting Ready* report. *Getting Ready* reports on earlier classes issued in 1997 and 2001 used non-comparable methodologies.

education ranged from 45 percent for the Class of 2000 to 49 percent for the Class of 2002. Other state data show that, between 1999 and 2003, participation rates of new high school graduates in Minnesota public and private post-secondary institutions grew from 46 percent to 51 percent for the fall immediately following graduation.⁵ Increases in post-secondary participation rates are typically drawn from graduates who did not prepare for college throughout high school.

In addition, after identifying the upward trend, Minnesota State Colleges and Universities examined institutional course-taking rates and consulted with institutional staff. Since 1999, system policies and institutional practices have focused on better identification and placement of entering students to help them succeed in college. Under direction from the Board of Trustees, institutions stepped up placement testing, and new registration procedures can be used to stop students from enrolling in classes if placement testing indicates they should first take a developmental course.

How do Minnesota developmental education enrollments compare with other states?

Because of reporting differences, it is difficult to compare Minnesota statistics directly with data from other states. All studies, however, show that large numbers of students enroll in developmental courses, particularly in two-year public colleges.

- In one national survey, public institutions reported that 32 percent of their first-time, full-time students took at least one developmental course in reading, writing or mathematics in fall 2000. Students attending two-year colleges were more than twice as likely to enroll in developmental courses as students attending four-year institutions. Forty-two percent of the students in public two-year colleges enrolled in developmental courses compared to 20 percent in public four-year universities.⁶
- A different national study looked at student transcripts. Based this review, it was estimated that 41 percent of the 1992 12th graders who enrolled in post-secondary education took a developmental course at some time during college. This study estimated that 61 percent of the students who first attend a public two-year college take developmental courses, compared to 25 percent of the students who first attend a public or private four-year institution.⁷

What developmental courses are recent high school graduates taking?

Of all developmental credits taken by the class of 2002, 56 percent were in mathematics. Writing courses account for 24 percent of the credits, all provided through Minnesota State

⁵ Minnesota Higher Education Services Office estimates.

⁶ *Remedial Education at Degree-Granting Postsecondary Institutions in Fall 2000*, National Center for Education Statistics, U. S. Department of Education, NCES 2004-010 (November 2003).

⁷ *The Condition of Education 2004*, National Center for Education Statistics, U. S. Department of Education, NCES 2004-077 (June 2004). Intermediate algebra, which enrolls large numbers of students and is considered a remedial course in Minnesota public institutions, was not counted as remedial at if the student attended a college that granted degree credit for it.

Colleges and Universities. The remaining credits were in other subject areas, namely reading at Minnesota State Colleges and Universities.

Virtually all credits taken at University of Minnesota campuses were in developmental mathematics. University of Minnesota campuses have not offered developmental courses in either reading or writing since 2000.

Mathematics credits account for the majority of developmental credits taken in both two-year colleges and four-year universities within Minnesota State Colleges and Universities. However, developmental writing credits made up 12 percent of the state university developmental credits and 27 percent of two-year college credits. Developmental reading enrollments are concentrated in the two-year colleges, where they accounted for 17 percent of the credits. Remaining developmental credits in Minnesota State Colleges and Universities were in English as a Second Languages, study skills and miscellaneous courses.

Twenty-eight percent of the class of 2002 who enrolled in Minnesota public higher education took a developmental course in mathematics. The majority of these students—17 percent of the class—enrolled in developmental mathematics only; the others took mathematics and developmental courses in another field such as writing or reading.

Content of Developmental Courses Taken in Minnesota Public Higher Education Institutions by 2002 Minnesota Public High School Graduates Within Two Years of Graduation	
Developmental Courses Taken	% of 2002 Graduates Who Enrolled in Public Higher Education Institutions
No developmental courses	64%
Any developmental courses	36%
Any mathematics	28%
Any writing	14%
Any reading	9%
Mathematics only	17%
Writing only	4%
Reading only	1%

Sources: University of Minnesota, Office of Institutional Research and Reporting and Minnesota State Colleges and Universities, Research and Planning

Developmental mathematics courses range in level from basic arithmetic to the equivalent of high school intermediate algebra. Significant numbers of recent high school graduates are being placed at all levels when they begin post-secondary education.

Can students who need developmental education succeed in college?

As one would expect, the average ACT Assessment scores of students who take developmental courses are lower than the scores of the entering class as a whole. Low ACT

Assessment scores are one reason students can be placed in developmental courses at the University of Minnesota and the four-year state universities.

Developmental Courses in Mathematics Taken in Minnesota State Colleges and Universities by 2002 Minnesota Public High School Graduates Within Two Years of Graduation	
Level of Developmental Mathematics	Percent of Courses Taken in Developmental Mathematics
Arithmetic/Basic Mathematics	25%
Elementary Algebra	37%
Intermediate Algebra	34%
Other Developmental Mathematics Courses	5%

Sources: Minnesota State Colleges and Universities, Research and Planning

Once they enroll, students who take developmental courses earn somewhat lower grades than students who do not. A college grade point average below 2.0 would indicate potential trouble in meeting academic standards for a degree. Sixteen percent of the class of 2002 students who enrolled in developmental courses were performing at that low level two years after high school, compared to 9 percent of students from that class who did not take developmental courses.

Assessment Test Scores and Academic Performance of 2002 Minnesota Public High School Graduates Enrolled in Minnesota Public Higher Education Within Two Years				
Minnesota Public Higher Education Institutions	Mean ACT Composite Scores		Percent of Students with College GPA < 2.0	
	Class of 2002 Total	Students Who Took Developmental Courses	Students Who Did Not Take Developmental Courses	Students Who Took Developmental Courses
All	Insufficient data	Insufficient data	9%	16%
University of Minnesota	23.7	19.1	8%	16%
Minnesota State Colleges and Universities (any)	Insufficient data	Insufficient data	10%	16%
Two-Year Colleges	Insufficient data	Insufficient data	10%	18%
State Universities	21.3	19.3	9%	13%

Note: ACT assessment scores are not available for most students who attend two-year colleges because scores are not required for admission. GPA data are for students who accumulated at least 16 credits within two years of high school graduation.

Sources: University of Minnesota, Office of Institutional Research and Reporting and Minnesota State Colleges and Universities, Research and Planning

Enrollment in developmental courses does not mean that a student cannot be successful in college. Of all students in the class of 2002 who took developmental courses, 84 percent earned a grade point average of 2.0 or better, and 28 percent earned a grade point average of 3.0 or better two years following high school graduation. Their success proves that the need for developmental education does not necessarily mean that college is a poor investment for them and for the state. However, because developmental credits do not count towards a degree, all students are better off getting the foundation they need in high school to start college-level courses right away.

Tables

Tables 1 – 5 report state-level summary information on 2000, 2001, 2002, and 2003 graduates from Minnesota public high schools who enrolled at Minnesota public colleges or universities.

- For the classes of 2000, 2001, and 2002, the information in Tables 1 – 5 includes the experience of students through two years following high school graduation.⁸
- For the class of 2003, preliminary information is reported for only one year following high school graduation.

Table 1: Enrollment and Extent of Developmental Courses/Credits

Table 1 reports the numbers of 2000, 2001, 2002, and 2003 Minnesota public high school graduates, the numbers who enrolled in public higher education, and the numbers of students who took one, two, three and four or more developmental courses.

Table 2: Content of Developmental Courses

Table 2 reports the numbers of developmental credits taken by 2000, 2001, 2002, and 2003 Minnesota public high school graduates in mathematics, reading, writing, English as a Second Language and study skills courses.

Table 3: Academic Performance in Higher Education: Cumulative Grade Point Average Distribution (Students Enrolled 16 or More Semester Credits)

Table 3 reports the distributions of cumulative higher education grade point averages for all 2000, 2001, 2002, 2003 Minnesota public high school graduates who enrolled in public higher education and for students who enrolled in developmental courses. Only students who earned at least 16 credits in post-secondary education are included.

Table 4: ACT Composite Scores

Table 4 reports the mean ACT Assessment composite score for all 2000, 2001, 2002, and 2003 Minnesota public high school graduates who enrolled in public four-year universities and for students who enrolled in developmental courses at these institutions. Two-year public colleges do not require the ACT for admission, and scores are not available for a representative sample of students.

⁸ Information on the class of 2000 was reported in a previous *Getting Prepared* (June 2002). Information on the class of 2000 in that report included only one year of data and therefore differs from the two years of data included in this report. 3,290 students or nearly 6 percent of the class, entered public higher education in the second year following graduation.

Table 5: Summary Report by High School

In Table 5, consolidated information on the high school classes of 2000 – 2003 is reported for each Minnesota public high school. The high school summary reports the combined number of graduates from these classes who took developmental or remedial courses at either of the public systems within two years after high school graduation (one year for the class of 2003).

To comply with state and federal data privacy laws,⁹ high schools with five or fewer graduates taking developmental courses are reported as a group. High schools that did not have any 2000 – 2003 graduates who enrolled in developmental courses at public colleges or universities are omitted from the table.

Caution should be exercised in interpreting the information in the high school summary. Graduates from a high school who enrolled in Minnesota public colleges and universities may not be representative of all graduates from that school. The college readiness of graduates who enrolled in private colleges or universities or at public colleges or universities in other states is not reflected in this report.

It is important to consider the absolute number of graduates from a high school as well as the percentage of graduates enrolled in public colleges or universities (Column E), the percentage of graduates who took developmental courses (Column G) and the percentage of total graduates who took developmental courses.

The high school summary in Table 5 reports the following information:

- **School District** – The school district that operates the high school. (Column A)
- **High School** – The name of the high school. (Column B)
- **Total Number of Graduates** – The combined total number of graduates from the high school in the classes of 2000, 2001, 2002, and 2003. (Column C)
- **Graduates Enrolled in Minnesota Public Higher Education** – The combined number of graduates from the classes of 2000, 2001, 2002, and 2003 from this high school that enrolled in a Minnesota public college or university during their first two years following graduation (one year for class of 2003). (Column D)
- **Graduates Enrolled in Minnesota Public Higher Education as a Percent of Total Graduates** – 2000 - 2003 graduates from this high school that

⁹ Minnesota State Colleges and Universities and the University of Minnesota are prevented from disclosing individually identifiable educational data on students by the Minnesota Government Data Practices Act and the federal Family Education Rights and Privacy Act. The systems are further precluded by the Rules of the Minnesota Department of Administration from disclosing information "...if it can in any way identify any particular individual." (Minnesota Rules, Section 1205.0200, subpart 4) Finally, the Family Education Rights and Privacy Act prohibits disclosure of information that would make the student's identity easily traceable. (34 C.F.R. Part 99.3.)

enrolled at a Minnesota public college or university as a percent of all graduates from the high school in those classes. (Column E)

- **Graduates Who Took Developmental Courses at Minnesota Public Higher Education Institutions** – The combined number of 2000 – 2003 graduates from this high school who took one or more developmental courses in a Minnesota public higher education institution during the first two years after their graduation (one year for class of 2003). (Column F)
- **Graduates Who Took Developmental Courses as a Percent of Graduates in Minnesota Public Higher Education** – The number of 2000 – 2003 graduates from this high school who took one or more developmental courses as a percent of all graduates from this high school who enrolled in a Minnesota public college or university. (Column G)
- **Graduates Who Took Developmental Courses as a Percent of Total Graduates** – The number of 2000 – 2003 graduates from this high school who took one or more developmental courses as a percent of all graduates from this high school, regardless of their attendance in post-secondary education. (Column H)

* Enrollment within two years of graduation for 2000, 2001 and 2002 graduates and within one year of graduation for 2003 graduates.

**Students who took courses at more than one Minnesota State College or University are counted only once. Therefore, this count is slightly lower than the sum of State Two-Year Colleges plus Minnesota State Universities.

* Enrollment within two years of graduation for 2000, 2001 and 2002 graduates and within one year of graduation for 2003 graduates.

**Indicates that there is no count of graduates for this school. In most cases, students attended this school and reported to the college or university that they "graduated" from the school. However, the school does not actually grant the diploma. The diploma is typically granted by another high school and the graduate is therefore reported in that high school's graduate count.

*** The numbers in column D are unduplicated within Minnesota State Colleges and Universities and within the University of Minnesota. That is, if a student attended two Minnesota State Colleges and Universities institutions, that student is counted one time in the total for this row. This total may not equal the total provided in other reports for the same high school where the count is not unduplicated.

* Enrollment within two years of graduation for 2000, 2001 and 2002 graduates and within one year of graduation for 2003 graduates.

**Indicates that there is no count of graduates for this school. In most cases, students attended this school and reported to the college or university that they "graduated" from the school. However, the school does not actually grant the diploma. The diploma is typically granted by another high school and the graduate is therefore reported in that high school's graduate count.

*** The numbers in column D are unduplicated within Minnesota State Colleges and Universities and within the University of Minnesota. That is, if a student attended two Minnesota State Colleges and Universities institutions, that student is counted one time in the total for this row. This total may not equal the total provided in other reports for the same high school where the count is not unduplicated.

Table 5

Summary Report By High School
2000-2003* Minnesota Public High School Graduates
Enrolled at Minnesota State Colleges and Universities or the University
of Minnesota During Fiscal Years 2000 to 2004

Caution should be exercised in interpreting this summary. The college readiness of graduates who enrolled in Minnesota public colleges or universities may not be a good indicator of the college readiness of all graduates from that high school. Column H indicates the percentage of all graduates from a high school that took developmental/remedial courses at public colleges or universities in Minnesota. High schools with five or fewer graduates in developmental courses are not listed individually, but are included as a group in the totals at the bottom of this report.

* Enrollment within two years of graduation for 2000, 2001 and 2002 graduates and within one year of graduation for 2003 graduates.

**Indicates that there is no count of graduates for this school. In most cases, students attended this school and reported to the college or university that they "graduated" from the school. However, the school does not actually grant the diploma. The diploma is typically granted by another high school and the graduate is therefore reported in that high school's graduate count.

*** The numbers in column D are unduplicated within Minnesota State Colleges and Universities and within the University of Minnesota. That is, if a student attended two Minnesota State Colleges and Universities institutions, that student is counted one time in the total for this row. This total may not equal the total provided in other reports for the same high school where the count is not unduplicated.

* Enrollment within two years of graduation for 2000, 2001 and 2002 graduates and within one year of graduation for 2003 graduates.

**Indicates that there is no count of graduates for this school. In most cases, students attended this school and reported to the college or university that they "graduated" from the school. However, the school does not actually grant the diploma. The diploma is typically granted by another high school and the graduate is therefore reported in that high school's graduate count.

*** The numbers in column D are unduplicated within Minnesota State Colleges and Universities and within the University of Minnesota. That is, if a student attended two Minnesota State Colleges and Universities institutions, that student is counted one time in the total for this row. This total may not equal the total provided in other reports for the same high school where the count is not unduplicated.
