The total cost of preparing the Report on 2006 SCORE Programs was \$10,600 including staff time, writing, editing, and printing.

The MPCA is reducing printing and mailing costs by using the Internet to distribute reports and information to a wider audience. For additional information on recycling, waste prevention, and waste management, check out the SCORE Web site: http://www.pca.state.mn.us/score

This report was printed on recycled paper manufactured without the use of elemental chlorine (cover: 30% post-consumer; body: 100% post-consumer).

Introduction

In 1989, based on recommendations of the Governor's Select Committee on Recycling and the Environment (SCORE), the Legislature adopted comprehensive legislation to launch Minnesota's statewide recycling efforts in earnest. This set of laws, commonly referred to as SCORE, initiated a stable source of state funding for recycling programs, as well as waste reduction and the improved management of household hazardous wastes and problem materials. SCORE legislation and grant dollars, along with funding from counties and local government provide the basis for long-term, flexible programs.

This *Report on 2006 SCORE Programs* summarizes information submitted by all 87 counties and the Western Lake Superior Sanitary District on waste management efforts, including waste reduction activities, recycling, household hazardous waste programs, and problem materials collection.

The Minnesota Pollution Control Agency (MPCA) uses this information to calculate the state's recycling rates and the cost of managing waste and recycling, and to detail trends in waste generation and disposal. While data collection began in 1989, the MPCA typically uses calendar year 1991 as a baseline for trend analysis. In 1991, counties began collecting data on a calendar year basis, instead of a fiscal year basis, and by that point, data collection and format had greatly improved, making the quality of the data that much better.

This report and information on the SCORE Program are available on the MPCA's Web site at http://www.pca.state.mn.us/score.

Every other year, the MPCA expands on the annual Report on SCORE Programs and makes solid waste policy recommendations to the Legislature in the form of a solid waste policy report. The 2007 Solid Waste Policy Report highlights policy recommendations and discusses other subsequent recommendations. See http://www.pca.state.mn.us for more details.

MSW Generation in Minnesota

Since 1989, Minnesota has shown a steady growth in municipal solid waste (MSW) generation. This growth is reflected in both the total amount of MSW generated and in the per capita figures (total waste generated divided by the state's population). During the robust years of 1994 to 1998, Minnesota saw a 4.62 percent increase in MSW generation and a 3.4 percent increase in per capita generation. In 1999, those rates began to slow during a downturn in the economy. After an increase in 2005 of nearly 2 percent, 2006 MSW generation growth slowed to an all-time low—increasing just 0.4 percent. Per capita generation of MSW remained roughly the same (1.167 tons in 2005 and 1.166 tons in 2006).

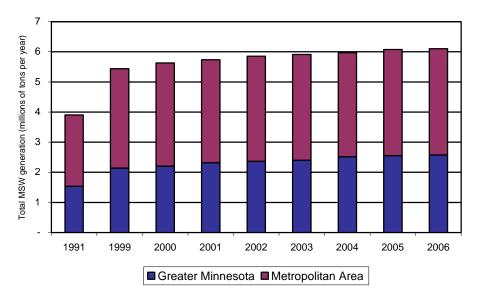

Mixed MSW is defined by statute as "garbage, refuse, and other solid waste from residential, commercial, industrial, and community activities that the generator of the waste aggregates for collection." It includes common materials found in household and commercial garbage, such as packaging materials, containers, food discards, and other compostable materials, plastic, paper, etc. MSW does *not* include auto hulks, street sweepings, ash, construction debris, mining waste, sludge, tree and agricultural wastes, tires, lead acid batteries, motor and vehicle fluids and filters, and other materials collected, processed, and disposed of as separate waste streams (Minn. Stat. § 115A.03, subd. 20). MSW *does* include wastes recycled, discarded (including tons sent to disposal and resource recovery facilities), tons disposed of on-site (burn barrels or farm dumps), and problem materials not recycled (PMNR).

Totals and trends

Minnesota MSW generation totaled 6,100,748 tons in 2006, a slight increase from 2005's 6,076,789. Statewide, this represents only a 0.4 percent increase over the previous year. Greater Minnesota accounted for 42 percent of the state's MSW generation, and the seven-county Metropolitan Area accounted for 58 percent in 2006.

Since 1991, MSW generation has grown on average by 3 percent per year. After the period of biggest growth (1989-1997), the average increase in MSW generation over the last nine years dropped to 2 percent (1998-2006) and just over 1 percent over each of the past four years (2003-2006). While improvement in waste reduction efforts may account for some decline, waste generation generally decreases during times of economic recession and increases during an economic upsurge.

Figure 1: Minnesota MSW Generation

Total generation: 6,100,748 tons

For 2005 – 2006 the amount of MSW generated in Minnesota increased by 0.4%, while population increased by 0.5%.

	1991	1999	2000	2001	2002	2003	2004	2005	2006	Changes 2005-06
Greater Minnesota	1.54	2.14	2.21	2.32	2.37	2.41	2.53	2.56	2.58	1%
Metropolitan Area	2.37	3.30	3.42	3.42	3.49	3.51	3.45	3.52	3.52	0.0
Minnesota	3.90	5.44	5.63	5.74	5.86	5.92	5.98	6.09	6.10	0.4%

Figures in millions of tons. For full data for 1991-2006, refer to Appendices

On-site and problem materials not recycled

On-site disposal of MSW, either burning or burying, has been a practice used for generations and still is being used. Although it is against the law for most people, some farmers are allowed to burn or bury their household garbage, under existing Minn. Stat. §§ 88.171 and 17.135.

In the 2006 SCORE survey, counties estimate that 1.3 percent of the total waste generated is disposed of onsite. This number may be conservative. According to a 2005 study of backyard garbage burning in Minnesota, 45 percent (estimated at a minimum of 920,000 people) of rural residents statewide still burn or bury on-site. This presents a significant health and environmental threat to all Minnesotans. U.S. Environmental Protection Agency (EPA) research shows that burn barrels are the primary source of dioxin in the United States. Just one burn barrel can produce as much or more than a full-scale municipal waste combustor burning 200 tons per day (*Inventory of Sources of Dioxin in the U.S.*, March 2001).

"Problem materials not recycled" (PMNR) makes up 2 percent of the total MSW generation. PMNR includes five materials that have been banned from disposal in Minnesota (vehicle batteries, tires, major appliances, motor oil, and oil filters). The PMNR number is that portion of the materials that is not recycled, but is assumed to be disposed of somewhere, legally or not, as they are banned from MSW disposal facilities. It is assumed that they are not being counted in landfill or incinerator tonnages.

Per capita MSW generation

The MPCA calculates the amount of waste that the "average" Minnesotan creates each year in an attempt to understand if waste growth is coming primarily from an increase in population or increases in consumption.

In 2006, the Minnesota per capita rate decreased insignificantly (-0.11 percent from 2005) to 1.166 tons per person (2,332 pounds/person/year). This is consistent with the small increases seen in MSW generation (0.4%) and with Minnesota's economy. In looking at greater Minnesota versus the Metro Area per capita rate, we find that the greater Minnesota per capita rate is 1.07 tons (2,140 pounds/person/year), an increase of approximately 0.37 percent from 2005. In comparison, the Metro Area per capita rate is 1.249 tons (2,498 pounds/person/year), a decrease of 0.44 percent from 2005. Greater Minnesota per capita rate has increased steadily since 1991. However, the Metro Area began to see a decrease beginning in 2001.

Minnesota's population continues to grow. In 2006, Minnesota's population increased to 5,231,106 from 2005 population of 5,205,091, only a 0.5 percent increase—greater Minnesota by 0.6 percent and the Metro Area by 0.4 percent. In the last five years Minnesota's population increased approximately 55,000 per year; however in 2006 the population increased by 26,000. From 1991 to 2006, Minnesota's population grew 18.5 percent—greater Minnesota increased 14.9 percent and the Metro Area increased by 21.7 percent.

Recycling and Waste Reduction

Minnesota's recycling programs are among the nations most successful, reflecting the strong local and state investment and public participation. In 2006, Minnesota's recycling rate (including credits for yard waste recycling and waste reduction efforts) increased by 0.2 percentage points to 48.7 percent. The state's base recycling rate is approximately 41.4 percent, an increase of nearly half of a percentage point. The base recycling rate is a more accurate measure of progress as it the actual percentage of materials recycled and does not include the additional source reduction and yard waste credits. While this growth reflects the significant state, local, and industry investment in our recycling system, as well as strong material markets, evidence suggests much more could be done to recover the millions of tons of discarded recyclable and organic material still disposed of each year.

In 2006, 1.3 million tons of recyclable material remained in the waste stream, worth \$312 million. Market prices for paper, plastic, and metal were high in 2006; however, at the same time we saw a drop in paper, plastic, and metal being recycled from 2005: paper was down 1,491 tons, plastic was down 876 tons, and metal was down 72.6 tons. Minnesota residents do not see financial advantages to recycle more during times the recycling markets are high. Businesses that have large quantities of recyclables and their own means to collect and market them see financial advantages of recycling when recycling market prices are high. The majority of the small businesses, however, do not see the financial advantages, and at times, their haulers may offer financial incentives not to recycle.

In 2006, recycling programs collected over 2.5 million tons of recyclable materials (paper, metals, glass, plastic, food, problem materials, etc.)—an increase of over 43,000 tons, or 1.7 percent, from the previous year. Since the SCORE legislation was enacted in 1989, the tons of materials collected for recycling in Minnesota have more than tripled, and the statewide recycling rate has increased by more than 25 percentage points, moving from approximately 23 percent to 48.7 percent.

In 2006, for the first time, source-separated compostables counted toward recycling. Source-separated compostable materials are defined as mixed municipal solid waste that is:

- separated at the source by waste generators for the purpose of preparing it for use as compost.
- collected separately from other mixed municipal solid wastes.
- composed of food wastes, fish and animal waste, plant materials, diapers, sanitary products, and paper that is not recyclable.
- delivered to a facility to undergo controlled microbial degradation to yield a humus-like product.

Of the total 179,043 tons of organics recycled, 166,966 tons were recovered as food to animals (food waste that is fed to livestock), 4,427 tons were recovered as food to people (food recovered for people through food banks), and the remaining 7,650 tons consisted of source-separated compostables.

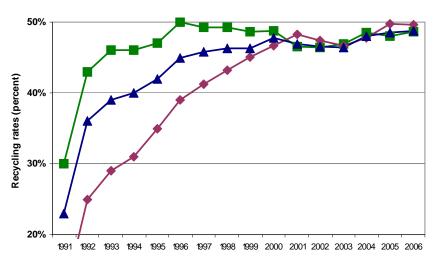

Figure 2: Minnesota's Recycling Progress

Since the SCORE legislation was enacted in 1989, Minnesota's statewide recycling rate has climbed by over 25 percentage points.

48.6% Metropolitan Area 49.7% Greater Minnesota

48.7% Statewide

In 2006, recycling programs in Minnesota collected over 2.5 million tons of recyclable materials (paper, metal, glass, plastic, food, source-separated organics, problem materials, and more), an increase from 2005 of 1.7%.

Electronic waste

Although the 2006 Legislature failed to pass the Electronic Waste Bill, the disposal ban of cathode-ray-tube-(CRT) containing products became effective July 1, 2006. The ban spurred counties and other entities to expand the number of collection options for waste electronics. According to the SCORE survey data, the amount of electronics collected has risen from 2000 to 2006 by 287 percent.

In 2006, 10,385 tons of electronics were recycled, and only four counties out of the 87 did not report recycled volumes. In the year 2000, only 2,686 tons of waste electronics were reported recycled with only 29 counties reporting recycling volumes. The greatest increase occurred between 2005 (7,027 tons were recycled) and 2006 (10,385 tons were recycled).

Source reduction

The MPCA works with Minnesota residents, schools, government, and other organizations to increase recycling, reduce waste generation, foster environmentally friendly purchasing practices, reduce the use of toxic cleaners, and conserve energy. The activities of two of these programs, Environmental Preferable Purchasing and the Healthy Sustainable Schools Project, are described here. Additional information on these programs and others can be obtained by going to http://www.pca.state.mn.us.

Environmentally preferable purchasing

In 2006, environmentally preferable purchasing (EPP) workshops took place throughout Minnesota; including the northeast, southwest, and metro regions. These half-day workshops were tailored to the purchasing needs of workshop attendees—from office administrators to public works staff to fleet managers. Breakout sessions covered multiple areas, including office supply procurement, fleet and building maintenance, and EPP information for schools. Informational workshops such as these are great ways for local governments to jumpstart interest in EPP and get the word out to the different departmental purchasers and product users that need the information.

Future EPP projects include working with the Solid Waste Management Coordinating Board to update the comprehensive online EPP Guide (http://greenguardian.org). The MPCA encourages counties to model and share this new and updated resource next year as part of a more comprehensive program to increase EPP across the state of Minnesota. In regards to policy, state and federal governments have supported efforts to increase EPP on the local level by setting the example with the passage of state mandates [16B.121 and 16B.122 (1989)] and federal executive orders [EO 13423(2007)].

More information can be obtained through the Environmentally Preferable Purchasing Guide that can be found at http://greenguardian.com or by contacting MPCA at 800-657-3864, http://www.pca.state.mn.us/epp.

Healthy Sustainable Schools Project

Under an EPA grant, the MPCA conducted a Healthy Sustainable Schools Project from 2004 to 2006. This project demonstrated that a dedicated coordinator and team in a school or district can make changes that benefit schools by enhancing student health and performance, attaining higher performing buildings, reducing environmental impacts, increasing attendance, reducing operating and maintenance costs, and increasing staff satisfaction.

Demonstrations were conducted in five districts with assistance from three coordinators: Houston K-12, Hutchinson High School, Becker High School, and the districts of Pine Point Elementary and Foley Schools. Eight school buildings were audited in many areas and the following results were achieved:

- Reduced energy costs of \$16,326 in two schools.
- Changed to less toxic cleaners in four schools.
- Added energy controls as the most common energy quick fix.
- Reduced paper use by moving to double-sided printing and copying.
- Changed to efficient T-8 lamps or reduced excessive lighting.
- Recycled more than 87 tons per year in two schools.
- Removed more than 6.87 pounds of mercury at four sites.
- Added vermi-composting or considering food to pigs for reducing waste costs.

Much greater waste reduction and recycling could be accomplished if these efforts were expanded across the state. School officials are encouraged to select from a variety of actions from the *Healthy Sustainable Schools Guide* to improve their facilities, while reducing labor and costs over time. To download the guide or for more information, visit http://www.healthyschools.state.mn.us or contact Project Coordinator Linda Countryman at 651-215-0269.

In the future, the MPCA plans to streamline agency assistance to schools by conducting surveys of superintendents and others to determine the most effective and efficient ways to help schools implement environmental practices.

Environmental and economic benefits of recycling

Recycling is important in Minnesota—both economically and environmentally. Minnesota's recycling manufacturers contribute an estimated \$2.98 billion to the state's economy; 9,000 manufacturing jobs are tied to companies using recycled material in their manufacturing processes. \$760 million in wages is related to recycling activities. In addition to the contributions of these value-added manufacturers, there is economic value related to collecting, processing, and marketing recyclables in Minnesota (which is supported by SCORE dollars).

Recycling's environmental benefits can be quantified using the National Recycling Coalition's (NRC) Environmental Benefits Calculator, based on tons of materials recycled, landfilled, and incinerated in Minnesota using the 2006 data submitted by its 87 counties and Western Lake Superior Sanitary District (WLSSD).

(For more information on recycling benefits, checkout the *Minnesota's Recycling Industries: Economic Activity Summary at* http://www.pca.state.mn.us/oea/market/economic.cfm and National Recycling Coalition at http://www.nrc-recycle.org.)

- By recycling 2.5 million tons, Minnesota reduced its greenhouse gas emissions by 1.7 million metric tons carbon equivalent compared to disposal. This is equal to taking nearly 1.3 million passenger cars off the road.
- By recycling, Minnesotans avoided the use of nearly 46 trillion BTUs of energy, which is equal to the energy use of almost 410,574 households.
- Recycling saves \$539 million in electricity use.
- By recycling 306,604 tons of steel in Minnesota, we saved a total of 616,274 tons of resources—383,255 tons of iron ore, 214,623 tons of coal, and 18,396 tons of limestone (http://www.recycle-steel.org).
- More than 6.8 million trees were saved by recycling over 503,150 tons of newsprint, mixed, and office paper in 2006 (http://www.conservatree.org).

MSW Processing and Disposal

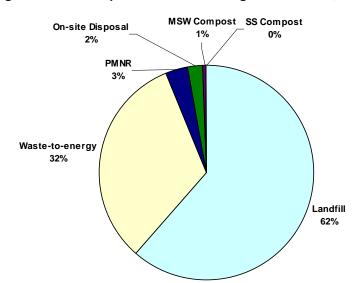

In Minnesota, waste is managed through four main methods: landfills, MSW composting, resource recovery facilities, and on-site disposal. In 2006, waste that was not recycled or prevented/reduced and, therefore, must be disposed of totaled nearly 3.6 million tons—a decrease of over 19,000 tons (-0.5 percent) from 2005. This number includes waste landfilled and processed, as well as estimates for on-site disposal and PMNR.

Trends in waste disposal

Waste management in Minnesota is guided by a hierarchy that prioritizes waste reduction, recycling, composting, and resource recovery. During 2006:

- MSW composting increased by 1 percent—from 17,742 tons in 2005 to 17,912 tons in 2006.
- On-site disposal (estimates from county staff on the level of on-site dumping and burning that occur) decreased by almost 3 percent (more than 2,000 tons) to 76,586 tons.
- Waste-to-energy (WTE) decreased by 6.7 percent (84,000 tons) to 1,161,066 tons. Facility down time for improvements accounted for some of the decrease since permitted capacity remains the same. At its peak in 1993, WTE handled 57 percent of the waste stream, but that share eroded to just 32 percent in 2006.

Figure 3: MSW Disposal and Processing in Minnesota, 2006

		Change 2005-06
Landfill	62.0%	3.6%
Waste-to-energy	32.0%	(6.7%)
PMNR (est.)	3.0%	(1.7%)
On-site Disposal (est.)	2.0%	(3.0%)
MSW Compost	1.0%	1.0%

Percentages of total waste disposal; excluding recycling. Decreases indicated by parentheses (x%).

• The amount of waste sent to landfills increased by 75,000 tons or 3.6 percent to 2,200,457 tons. Despite being the least-preferred option, landfilling has become the dominant disposal method in Minnesota (62 percent), more than double its share in 1993 (28 percent).

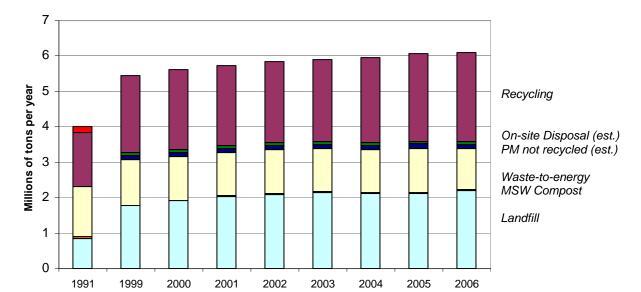

Figure 4: Trends in Minnesota Waste Management in Tons

										Change
	1991	1999	2000	2001	2002	2003	2004	2005	2006	2005-06
Source-separated Compost					0.004	0.005	0.01	0.01	0	(100%)
Recycling	1.2	2.18	2.27	2.27	2.29	2.32	2.42	2.49	2.52	1.7%
On-site Disposal (est.)		0.08	0.10	0.09	80.0	0.08	0.08	0.08	0.08	(3.0%)
PM not recycled (est.)		0.11	0.11	0.11	0.12	0.12	0.12	0.12	0.12	(1.7%)
Waste-to-Energy	1.41	1.28	1.23	1.22	1.26	1.23	1.21	1.24	1.16	(6.7%)
MSW Compost	0.07	0.02	0.01	0.01	0.01	0.01	0.01	0.02	0.02	1.0%
Landfill	.84	1.77	1.91	2.03	2.11	2.16	2.12	2.12	2.20	3.6%
Total	3.69	5.44	5.63	5.74	5.88	5.92	5.98	6.09	6.10	4.6%

Figures in millions of tons. PM = Problem Materials. Decreases indicated by parentheses (x%).

Out-of-state waste flow

In 2006, there was a decrease of 72,000 tons (-9 percent) in the amount of MSW leaving Minnesota—from 812,379 in 2005 to 740,269 tons in 2006. 2005 was the first time since 2002 that there was a decrease in the

amount of MSW leaving the state. While many factors may have contributed to this decline in out-of-state waste flow (facility locations, hauling companies in operation, existing contracts, surcharges and tip fees, and gas prices), increasing state surcharges from Wisconsin and rising transportation costs likely have had the most impact. The price of gasoline is probably the largest reason for the decline in MSW leaving Minnesota. Since 2003, gas prices have increased nearly 73 percent (from \$1.786 per gallon in 2003 to \$3.083 in 2006; http://tonto.eia.doe.gov/dnav/pet/hist/mg_tt_usw.htm).

MSW leaving Minneso								
2001	671,954 tons							
2002	614,002 tons							
2003	702,131 tons							
2004	850,204 tons							
2005	812,380 tons							
2006	740 269 tons							

^{*} Unknown destination waste totals were only reported during the early years of SCORE (1989-1994).

Wisconsin received the majority of the 740,269 tons of waste going out-of-state. Iowa received 23 percent; North Dakota received 14 percent; and South Dakota received a fraction of a percent (0.2 percent).

Minnesota MSW going out-of-state

	2005	2006	Change in tons	Change in %
Wisconsin	519,875	467,538	(52,337)	-10 percent
North Dakota	87,684	103,384	15,701	18 percent
South Dakota	1,498	1,405	(93)	-6 percent
lowa	203,323	167,941	(35,382)	-17 percent

Of the total waste going out-of-state, 1.3 percent (9,544 tons) was taken to the NRG Facility in La Crosse, Wisconsin, privately owned by Xcel Energy. The remaining 98.7 percent (730,725 tons) was taken to landfills, of which 87 percent are privately owned and 13 percent are publicly owned. Five of Wisconsin's privately owned landfills received 404,960 tons, and two publicly owned landfills received 53,035 tons. In North Dakota, one privately-owned landfill received 61,731 tons and two publicly-owned landfills received 41,653 tons. In South Dakota, one publicly-owned landfill received 1,405 tons. In Iowa, three privately-owned landfills received 167,941 tons.

Funding of SCORE Programs

Minnesota boasts one of the best recycling rates in the nation due to the level of participation by our residents and businesses, along with comprehensive recycling programs at the township, city, and county levels—programs funded by local government and state revenues. In 2006, Minnesota counties spent over \$54.5 million for SCORE-related programs, an increase of about \$300,000 (0.6 percent) from 2005. Continued funding commitments from the Legislature and significant investments at the local level provide the funding for these programs.

State funding: SCORE block grants

From the inception of SCORE, state tax revenue has provided a long-standing funding source for recycling and waste reduction programs. Money from the state is passed on to the county level in the form of annual block grants. SCORE disbursement dollars had been consistently \$14.2 million per year, until 2002 when the Legislature cut SCORE block grant dollars by 10 percent, dropping the figure to \$12.6 million. To handle a budget shortfall in 2003, the governor enacted a one-time general revenue un-allotment, and available SCORE dollars fell further to \$11.2 million. This downward trend reversed beginning in 2004, when block grants rose to \$12.5 million. (Subsequently, in the 2007 Session, the Legislature and Governor took action to restore SCORE funds to the levels of 2002, or \$14 million per year.)

Within certain guidelines, counties have broad discretion in determining how to spend SCORE block grants and local matching funds, which gives them flexibility to develop programs that best meet local needs. The MPCA monitors the county use of SCORE grants to ensure the money is used to fund SCORE-eligible programs: source reduction, recycling, market development, management of problem materials, waste education, litter prevention, technical assistance to ensure proper solid waste management, and waste processing (Minn. Stat. § 115A.55).

Despite the economic value of the recycling industry to the state's economy, Minnesota's recycling infrastructure faces challenges. Some counties are dealing with budget reductions by closing down recycling centers or limiting the types of materials they collect. Plastic and glass recycling have been eliminated in some communities. Rural recycling programs, in particular, are facing more obstacles in getting materials to distant markets. The MPCA continues to explore ways to better support county recycling programs and secondary markets, recover more recyclable and organic material from the waste stream, and identify more opportunities to reduce, reuse, and recycle in the manufacturing and business sectors.

Restoring SCORE grant dollars to previous levels and looking into additional funding (incentive based) would show the state's renewed commitment to recycling and offer counties the ability to restore their reduced or cut programs. The additional funding would also enhance the ability to remove usable materials from the disposal system and capture energy and economic benefits for the state. While we will talk more about SCORE grant dollars in the *Report on 2007 SCORE Programs*, the Legislature did increase SCORE funds to previous levels, to \$14 million. For more information on state SCORE funding and recommendations for the 2008 legislative session, see the MPCA's 2007 Solid Waste Policy Report.

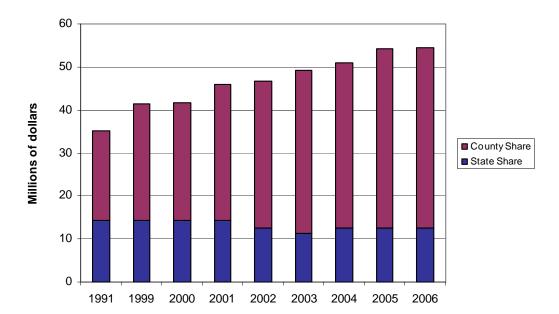

Figure 5: SCORE Expenditures (millions of dollars)

County funding

Between 1992 and 2006, overall SCORE expenditures have increased by 41 percent. These increases have been funded entirely at the local level by counties and cities through use of general revenue dollars, special assessments, or other sources of revenue. In 2006, a total of \$54.5 million was spent on SCORE expenditures. Greater Minnesota counties *increased* expenditures by \$1 million (3.4 percent) and the metro counties *decreased* their spending by \$750,000 (-3.1 percent) from 2005.

	1991	1999	2000	2001	2002	2003	2004	2005	2006	Change 2005-06
Greater Minnesota	14.4	23.0	23.1	25.8	26.7	29.5	28.5	30.22	31.25	3.4%
Metropolitan Area	20.8	18.4	18.6	20.2	19.9	19.7	22.6	24.06	23.35	(3.1%)
Total	35.2	41.4	41.7	46.0	46.7	49.1	51.1	54.28	54.60	0.6%

Decreases indicated by parentheses (x%). The annual SCORE survey includes only county spending; local units of government also fund programs for waste management, reduction, and recycling.

Each county is required to match the funding from the Legislature with a local contribution of at least 25 percent. In 2006, counties continued to exceed this match, spending over \$42 million of county funds toward SCORE-related activities. This investment is in addition to undocumented dollars spent by other local units of government, such as cities and townships on programs such as recycling, household hazardous waste, and waste education.

Counties continue to see their dollars not keeping up with inflation. Rural recycling programs, in particular, face growing challenges to collect materials and deliver them to markets. These challenges are seen by significantly reduced volumes of materials collected and its residents discouraged from recycling. Counties' declining dollars are not covering their existing recycling programs and have been hard pressed to expand their recycling programs. Counties are aware of the million of tons of recyclables remaining in the waste stream and of the missed economic and environmental benefits associated with recycling.

In looking closer at how the decreasing dollars affect local staff and programs along with how the counties are obtaining the necessary dollars to pay for their programs, we looked at years prior to 2002, when the Legislature permanently reduced SCORE block grant dollars, to 2006.

In 2000, there were a total of 572 full-time equivalent (FTE) county, township and city staff people working on SCORE related activities compared to in 2006, 528 FTEs. This drop began in 2003 when the FTE went down to 540 FTE.

In looking closer at the counties' revenues as reported in "Revenues and Expenditures" in the SCORE survey report, it was found that during this same time period, 2000 to 2006, the counties had increased tipping fees, surcharges, and service fees to make up the lost revenue from SCORE and MPCA grants and to keep up with inflation. In 2006, SCORE disbursements were down 11 percent and MPCA grant dollars were down 23 percent from 2000. In response, general revenue (which is from county special assessments, levy, and property taxes) increased 115 percent, from \$3.3 million in 2000 to \$7.1 million in the year 2006.

Revenues received from material sales and other sources increased during this same time period. Material sales increased by 28 percent. In 2000, counties received \$3.6 million and, in 2006, \$4.6 million. The majority of this increase has been since 2003.

In comparison to the decrease in SCORE disbursements and grant dollars, MPCA funding to household hazardous waste (HHW) programs continued. In the year 2000, counties received \$428,790 from MPCA, in 2006, \$518,959. However, in 2006, dollars received for county HHW programs decreased from 2003's disbursement of \$600,661,or by 14 percent.
