2011 MUNICIPAL SCREENING BOARD DATA

Highway 10 Construction/Connect Detroit Lakes, Mn

Highway 10 Construction/ Connect Detroit Lakes, Minnesota

The Highway 10/Connect Detroit Lakes construction project began in April of 2007. Paving was done on Washington Avenue, north of Highway 10 and a new traffic signal system was installed in this area. The new Highway 10 alignment was opened by August 2008 and all major construction completed by October of 2008. The Connect Detroit Lakes project includes the reconstruction and realignment of approximately three miles of Highway 10, realignment of the BNSF railroad tracks, construction of a Roosevelt Avenue underpass of Highway 10 and the BNSF railroad, reconstruction of approximately one-half mile of Highway 59 between Highway 10 and Highway 34, and the construction of a frontage road around Big Detroit Lake from East Shore Drive to downtown Detroit Lakes, which completes the local ring road around the lake.

The project included the realignment of multiple intersections with Highway 10 and MSAS routes. Improvements to the MSAS routes included new curb & gutter and sidewalk construction, channelization, traffic signals, and other improvements to intersections. The city has also accepted 0.72 miles of local roads that were in former TH 10 right of way, with more mileage to come.

Safety will be improved at railroad crossings and intersections, and mobility will be balanced for throughtraffic on Highway 10 as well as local motorist access.

The goal of the project is to improve safety along the Highway 10 corridor. The design balances mobility for through-traffic on Highway 10 with local traffic movements in harmony with the area's cultural and natural resources.

Minnesota Department of Transportation State Aid Division 395 John Ireland Boulevard Saint Paul, MN 55155

To: Municipal City Engineers City Clerks

An Equal Opportunity Employer

From: R. Marshall Johnston Manager, Municipal State Aid Needs Unit

Subject: 2011 Municipal Screening Board Data Booklet

Enclosed is a copy of the June 2011 "Municipal Screening Board Data" booklet.

The data included in this report will be used by the Municipal Board at its May 24 and May 25, 2011 meeting to establish unit prices for the 2011 Needs Study that is used to compute the 2012 apportionment. The Board will also review other recommendations of the Needs Study Subcommittee and the Unencumbered Construction Funds Subcommittee as outlined in their minutes.

Should you have any suggestions or recommendations regarding the data in this publication, please refer them to your District Screening Board Representative or call (651) 366-3815.

This report is distributed to all Municipal Engineers and when the municipality engages a consulting engineer, a notice is emailed to the municipal clerk stating that it is available for either printing or viewing at http://www.dot.state.mn.us/stateaid/

Mission Statement:

The purpose of the state-aid program is to provide resources, from the Highway Users Tax Distribution Fund, to assist local governments with the construction and maintenance of community-interest highways and streets on the state-aid system.

Program Goals:

The goals of the state-aid program are to provide users of secondary highways and streets with:

- Safe highways and streets;
- Adequate mobility and structural capacity on highways and streets; and
- An integrated transportation network.

Key Program Concepts:

Highways and streets of community interest are those highways and streets that function as an integrated network and provide more than only local access. Secondary highways and streets are those routes of community interest that are not on the Trunk Highway system.

A community interest highway or street may be selected for the state-aid system if it:

A. Is projected to carry a relatively heavier traffic volume or is functionally classified as collector or arterial

B. Connects towns, communities, shipping points, and markets within a county or in adjacent counties; provides access to rural churches, schools, community meeting halls, industrial areas, state institutions, and recreational areas; serves as a principal rural mail route and school bus route; or connects the points of major traffic interest, parks, parkways, or recreational areas within an urban municipality.

C. Provides an integrated and coordinated highway and street system affording, within practical limits, a state-aid highway network consistent with projected traffic demands.

The function of a road may change over time requiring periodic revisions to the stateaid highway and street network.

State-aid funds are the funds collected by the state according to the constitution and law, distributed from the Highway Users Tax Distribution Fund, apportioned among the counties and cities, and used by the counties and cities for aid in the construction, improvement and maintenance of county state-aid highways and municipal state-aid streets.

The *Needs* component of the distribution formula estimates the relative cost to build county highways or build and maintain city streets designated as state-aid routes.

2010 MUNICIPAL SCREENING BOARD FALL MEETING MINUTES October 26 & 27, 2010

Tuesday Afternoon Session, October 26, 2010

I. Opening by Municipal Screening Board Chair Jeff Hulsether

The 2010 Fall Municipal Screening Board was called to order at 1:10 PM on Tuesday, October 26, 2010.

A. Chair Hulsether introduced the Head Table and Subcommittee members:

Jeff Hulsether, Brainerd - Chair, Municipal Screening Board Jean Keely, Blaine - Vice Chair, Municipal Screening Board Rick Kjonaas, Mn\DOT – Deputy State Aid Engineer Marshall Johnston, Mn\DOT - Manager, Municipal State Aid Needs Unit Deb Bloom, Roseville - Chair, Needs Study Subcommittee Chuck Ahl, Maplewood - Chair, Unencumbered Construction Funds Subcommittee and Past Chair, Municipal Screening Board Shelly Pederson, Bloomington - Past Chair, Municipal Screening Board Kent Exner, Hutchinson - Secretary, Municipal Screening Board

B. Secretary Exner conducted the roll call of the members present:

District 1	Jim Prusak, Cloquet
District 2	Rich Clauson, Crookston
District 3	Steve Bot, St. Michael
District 4	Tim Schoonhoven, Alexandria
Metro West	Tom Mathisen, Crystal
District 6	David Strauss, Stewartville
District 7	Troy Nemmers, Fairmont
District 8	Kent Exner, Hutchinson
Metro East	Russ Matthys, Eagan
Duluth	Cindy Voigt
Minneapolis	Don Elwood
St. Paul	Paul Kurtz

C. Recognized Screening Board Alternates:

District 1 David Salo, Hermantown

D. Recognized Department of Transportation personnel:

Julie Skallman	State Aid Engineer (Wednesday meeting only)
Merry Daher	Acting State Aid Programs Engineer
Walter Leu	District 1 State Aid Engineer
Lou Tasa	District 2 State Aid Engineer
Kelvin Howeison	District 3 State Aid Engineer
Merle Earley	District 4 State Aid Engineer
Steve Kirsch	District 6 State Aid Engineer
Doug Haeder	District 7 State Aid Engineer
Mel Odens	District 8 State Aid Engineer
Greg Coughlin	Metro State Aid Engineer
Mike Kowski	Assistant Metro State Aid Engineer
Julee Puffer	Municipal State Aid Needs

E. Recognized others in Attendance:

Larry Veek, Minneapolis Jim Vanderhoof, St. Paul Patrick Mlakar, Duluth Glenn Olson, Marshall Dave Sonnenberg, Chair of CEAM Legislative Committee Lee Gustafson, Needs Study Task Force Representative

II. Review of the 2010 Municipal State Aid Street Needs Report Booklet.

- A. Introductory information in the booklet (through Page 7)
- B. May Screening Board Minutes (Pages 7-29)

Chair Hulsether stated that the May 2010 Screening Board meeting minutes are presented for approval. Johnston explained that the minutes were reviewed at all the District meetings. There were no additional comments or questions; therefore the minutes were not read in full.

Motion by Bot, seconded by Schoonhoven to approve the minutes as presented. Motion carried unanimously.

C. Tentative 2011 Population Apportionment (Pages 31-39)

Johnston stated that the spreadsheets describing the population apportionment (50% share of total) were reviewed at each District meeting. There were three new Cities added to the system this year. The total population amount increased by approximately 30,000 people due to the additional cities, growth and annexations.

Mathisen inquired on when the 2010 census information would be used. Johnston replied that the recent census data would be incorporated into the

Needs data for the January of 2012 allocation. There were no additional questions on this section of the booklet.

D. Effects of the 2010 Needs Study Update (Pages 40-43, Handout)

Johnston stated that pages 40 through 82 explain how each respective City's Construction Needs are determined. This information was also reviewed and discussed at each District Prescreening Board meetings. He also explained that a calculation error was made in the original booklets that were mailed out. However, that error has been addressed and the revised booklet is on the SALT website and handouts of the revised sections have been provided. Due to the timely acknowledgement and correction of the error, there will not be any impacts to next year's data or allocations.

- E. Mileage, Needs and Apportionment (Pages 44-47)
- F. Itemized Tabulation of Needs (Pages 48-50, Handout)
- G. Tentative 2011 Construction Needs Apportionment (Pages 51-57, Handout)
- H. Adjustments to the Needs (Pages 60-82, Handout)

Johnston stated that the City of Orono is in the final year of their three-year negative adjustment for including private roadways within their mileage calculations.

I. Recommendation to the Commissioner (Pages 83-85, Handout)

Johnston stated that the 2010 adjusted Construction Needs must be recommended to the Commissioner of Transportation before November 1, 2010, for the calculation of the January 2011 apportionment.

J. Tentative 2011 Total Apportionment, Comparisons, and Apportionment Rankings (Pages 86-95, Handout)

Johnston indicated that several pages of the booklet are dedicated to comparing and ranking each respective City's allocation.

- K. Other Topics
 - a. Certification of MSAS System as Complete (Pages 104-106) Johnston explained that if a City's State Aid system is completely adequate for Needs purposes or built to State Aid standards, then the 50% of a City's allocation that is based on population can be utilized to improve non-MSAS roadways. At this time, there are four Cities certified as complete with one more, City of Crookston, currently being reviewed with the potential of being completed by the end of this year.
 - b. Advance Guidelines (Pages 107-108)

Johnston reported that State Aid staff's revisions to the advance guidelines will be communicated in the near future on the SALT website under the Finance section. Kjonaas stated that the existing priority criteria will no longer be administered and that the vast majority, if not all, advancement requests will be approved if established amount limitations are met.

- c. History of the Administrative Account (Page 109) Johnston reviewed the State Aid administrative account arrangement of 2% of the overall allocation being dedicated to administer meetings and other activities. Any funds that remain within this account at the end of the year are transferred into the following year's apportionment.
- d. Research Account (Page 110) Johnston explained that ½% of the overall allocation is annually dedicated to the MSA Research Account (currently about \$630,000) and that this percentage has not been deviated from in the past.
- e. Transportation Revolving Loan Fund (Pages 111-112) Johnston informed the Screening Board that they have the opportunity, per State Statute since 2009, to direct a portion of the overall allocation to a separate account, TRLF, for funding of identified projects. The Screening Board is required to act on this item annually.
- f. County Highway Turnback Policy (Pages 113-114) Johnston stated if there are any specific questions in regards to the County Highway Turnback Policy, the City Engineers should contact their respective DSAE.
- g. Current Resolutions of the Municipal Screening Board (Pages 115-124) Johnston explained that the current Resolutions have remained the same with the exception of the unit price recommendations from this past spring's Screening Board meeting.
- h. Needs Study Task Force (Pages 98-103, Presentation by Lee Gustafson, NSTF Representative) Gustafson provided a presentation (see attachment) regarding the discussion and results of the recent Needs Study Task Force meeting. He stated that the agenda of their meeting was based on the direction provided by the Screening Board at their spring meeting. With the variety of District representative experience levels, Gustafson explained that there was significant input and differing feedback gathered at this meeting. Per Gustafson, there was the realization at their meeting that the need for new software is driving the opportunity to review the Needs analysis approach. However, he noted that the group as a whole agreed that the current premise of distributing the Cities' allocations on a 50:50 basis between population and Needs while administering a minimum population requirement of 5,000 people is acceptable and should be maintained into the future. This existing allocation system approach has

been in place for over 50 years and has proven to be justifiable and effective. Lastly, Gustafson communicated that the NSTF believes that extensive effort will be required to address the charge given to them by the Screening Board and that the assistance of a facilitator may be beneficial to the group's performance. The possibility of utilizing Municipal State Aid Administrative funds to support the hiring of a facilitator was discussed. Gustafson stated that the NSTF anticipates a 1-year timeframe with several regular meetings to appropriately address the task at hand.

Ahl questioned whether the facilitator would be someone capable of organizational skills or a consultant familiar with the Needs process.

Gustafson responded that the NSTF believes that consultant familiarity isn't necessary and that the facilitator could be an administrative person capable of scheduling meetings, minutes preparation, tracking action items, and formatting presentations.

Elwood agreed that the primary focus of the facilitator would be tracking action items to ensure that the NSTF is progressing accordingly.

Ahl asked if it should by be State Aid staff's role to provide administrative support during this process.

Prusak mentioned that the NSTF could expedite the process and make recommendations directly to State Aid staff for review as they occur.

Gustafson stated that State Aid must hear from the Screening Board on this issue and that constructive input from the NSTF is a critical part of the process.

Kowski added that achieving an equitable method of addressing Needs calculations should be the focus of the NSTF.

Gustafson reiterated that the NSTF meeting was very productive and everyone involved had great comments/input.

Kjonaas replied to an earlier question, in that theoretically, State Aid staff should be responsible to assist in facilitating activities such as the NSTF. However, at this time, State Aid is understaffed with respect to the current workload being addressed. Also, State Aid staff is unsure of the first steps of the NSTF and probably would have limited role initially. In the future, State Aid staff may be able to assist with the facilitating of the NSTF in some manner.

Bloom offered that facilitating the NSTF seems like a large commitment and that utilizing a consultant familiar with the process may be beneficial. Mathisen inquired on why the NSTF meeting was lengthy with respect to time and wondered if the Screening Board's charge to them was clear.

Gustafson responded that the charge to the NSTF is to analyze everything associated with the Needs software and process. Comments and ideas from the NSTF members will drive different scenarios and potential recommendations to the Screening Board.

Mathisen questioned if this process could become contentious amongst the NSTF members and if the potential facilitator should be a disinterested third party.

Gustafson answered that he doesn't believe that contention will be an issue and that the NSTF members realize that they must work together to address this issue.

Elwood questioned whether you would be able to find a disinterested third party and that the purpose of a facilitator should be to continually use and expand upon the information being gathered.

Gustafson replied that one of the roles of the facilitator would be to touch on past discussions and information.

Salo stated that the current program is inflexible and that an example of this fact is the error Johnston had in preparing the information this year, even with Johnston being very good at administering spreadsheets. Salo believes that a disinterested third party is critical in facilitating the NSTF's work.

Mathisen asked if the use of the term Needs per State Statute guides this analysis in any manner.

Kjonaas responded that that is a very good question and the use of a radical method to calculate Needs would probably be questionable. He stated that the current Screening Board discussions in regards to establishing Needs would be within the legal definition.

Mathisen inquired on the requirement to use the term Needs.

Gustafson replied that this question could be asked of the NSTF by the facilitator.

Bot asked a three-part question regarding the potential of winners and losers resulting from the proposed County system, could relatively simple spreadsheets be developed to administer the Cities' Needs process, and whether the LRRB research project process, where a consultant is utilized, would be applicable to the NSTF. Gustafson responded that most Cities don't have the staffs to follow the approach being proposed by the Counties. He also reiterated that the NSTF should be able to come to a relatively timely conclusion with the assistance of a facilitator. Per Gustafson, the charge being assigned to the NSTF is different than an LRRB project in that the group is being asked to deliver a specific recommendation.

Bloom added that the LRRB project process typically entails a specific scope.

Keely mentioned an administrative assistance company called Time Savers.

Gustafson believes that the NSTF should be allowed to determine who would best fit the group as a facilitator.

Mathisen asked if the authorization of the use of a facilitator would occur during tomorrow's meeting.

Gustafson mentioned that State Aid staff would hire the facilitator.

Voigt asked if there would be a specific facilitator compensation amount for the Screening Board to approve.

Gustafson stated that the use of the facilitator could be monitored over the next 12 months and reported back to the Screening Board.

Chair Hulsether asked for any further questions or thoughts.

III. Other Discussion Items

- A. Report from Project Management Software Committee
 - Chair Hulsether introduced Voigt as the Chairperson of the Project Management Software Committee (PMSC).

Voigt reported that an RTVision representative presented the One Office software during all of the District Pre-Screening Board meetings. The history of this specific software goes back to the County Engineers developing it with funds from their administrative account. Since then, Kjonaas has arranged for the opportunity that allows Cities to purchase the software package independently. At this time, a limited number of Cities, representing approximately 10% of the overall MSAS allocation, utilize the software. Per Voigt, the PMSC discussed the issues of the significant differences between MSA Cities that ultimately can determine the functionality of this software to them and whether there would be more programming advancements to the current software that allow it to be more applicable to the wide range of potential City projects. Voigt stated that feedback was received from each District and that meeting minutes would be prepared and distributed in the near future (PMSC meeting held

one day prior to Screening Board). In general, the District input consisted of the position to not require the use of this software and allow for the purchase of it through each respective City's construction or maintenance allotment. Voigt stated that Kjonaas will be working with the vendor to hopefully arrive at a favorable price point for the software base package. Voigt mentioned that the implementation of this software could be timely with the potential revisions to the Needs calculations. At this point, the PMSC also recommended that the CEAM Executive Committee continue to gather feedback regarding the possible use of this software, Kjonaas continue to negotiate a software price structure, and State Aid staff determine how to address the issue of competitive bidding requirements.

Chair Hulsether inquired on the possibility of State Aid mandating the use of the One Office software for specific projects.

Kjonaas thanked Voigt for an excellent presentation and stated that he didn't have anything to add. Kjonaas informed the Screening Board that State Aid does not foresee a situation where use of this software would be required for any projects. However, Kjonaas communicated that audits of Federal Aid projects continue to be an issue and that sometimes the audits are even being audited. Kjonaas believes that Federal representatives will continue to apply pressure to insure that all project administration and reporting standards are being satisfied.

Prusak questioned whether Federal project reporting requirements would change depending on the results of the upcoming election.

Bot asked what the initial and annual costs for the software package could be.

Voigt responded that recent vendor price quotes include the e-approval module. At this time, the program with two licenses and 5-year technical support contract would cost \$12,425. If the software is hosted on RTVision's server, the cost for the same package would be \$10,400. If hosted on RTVisions' server but the City stores all incorporated information, the cost for the package would be \$10,765. In regards to having a City's consultants utilize their software for a specific project, the City of Duluth provides a license to the consultant for \$1,000.

Matthys stated that the City of Eagan is very interested in the potential utilization of a project management software. However, he questioned whether other packages or vendors had been reviewed and if Cities would be permitted to purchase different project management software with State Aid funds.

Kjonaas replied that State Aid Finance staff seems to be against utilizing construction allotment funds for any software purchases and would rather see maintenance funds spent on this. In regards to other software packages or vendors, Kjonaas stated that RTVision has direct ties to State

Aid and that allowing for the purchase of other softwares may be troublesome.

Chair Hulsether asked Kjonaas if he would like to see Screening Board action on this topic at this time.

Kjonaas responded that the Screening Board or CEAM Executive Committee should request the use of a City's construction allotment through the project engineering reimbursement section.

B. State Aid Report

Kjonaas reported that State Aid items including new DBE requirements of contacting the low bidder prior to project award, future Best Value Contracting training, recently announced retirements of three State Aid staff people, continued focus on design-build projects, ongoing State Aid Rules review process, and flood recovery legislation were covered in detail at each of the District Pre-Screening Board meetings.

Chair Hulsether asked if anyone would have any interest in serving on a Mn/DOT DBE Committee. Mn/DOT is specifically seeking someone with knowledge of local construction contracts.

Kjonaas reiterated the need for a City Engineer to volunteer for this Committee.

Pederson asked if a City's Senior Engineer would be a Committee participant alternative.

Daher informed the group that this committee may meet up to once a week during the active bid letting timeframe.

Gustafson requested that Chair Hulsether solicit the entire CEAM membership for a volunteer.

Bot asked if the Mn/DOT DBE Office should have a staff person familiar with construction contracts and costs.

Kjonaas responded that there is an apparent need, but that existing Mn/DOT staff is being asked to provide support of this office.

C. Legislative Update

Sonnenberg provided a brief legislative update summary and communicated that he would discuss items such as the recent CEAM Committee Strategic Planning meeting discussions, potential Street Improvement District, State Statute 429 revisions, and potential local option sales tax in detail during tomorrow's meeting.

D. Complete Streets

Pederson listed the members of the CEAM Complete Streets Committee. Pederson communicated that the intent of the Complete Streets legislation is "not all modes for all roads, but is the right modes for the right roads". She stated that incorporating Complete Streets standards would require that the Section 8820 State Aid Rules to become more flexible. Pederson stated that several resources such as existing State Aid Rules, Mn/DOT Bikeway Manual, AASHTO Green Book, Walkable Communities Guidelines, and others are being utilized as potential State Aid Rules changes are being considered. Per the discussions of this committee, another consideration that must be addressed is how different Cities would approach the administration of new rules or standards. This process is nearing the completion of a rough draft of possible rules changes and this preliminary document will be distributed for comments in the near future. Initial feedback from some rural County Engineers has not been favorable. Thus, comments from City Engineers in regards to the draft rule changes are very important. Pederson stressed that the Complete Streets advocates are being very proactive and the engineering profession must respond accordingly.

Schoonhoven inquired on what the ultimate review and possible approval timeframes are.

Pederson replied that the rough draft will be distributed in December and the final draft will be reviewed at the CEAM Business Meeting in January.

Olson asked if transit modes were being address addressed at this time.

Pederson answered that only the bicycle mode is currently being reviewed.

Schoonhoven asked if pedestrian facilities are being considered.

Pederson stated that only the on-road bicycle mode is being analyzed.

Daher communicated that Cities should be working on their respective ADA Transition Plans to address pedestrian facility needs.

Pederson stated that Cities typically review ADA requirements as they pertain to buildings and typically utilize their alternative transportation plans to ensure that all corridor users are being appropriately addressed.

Daher responded that ADA requirements are being mandated to roadway corridors through the Department of Justice.

Pederson replied that ADA compliance may be addressed through a City's Human Services Department.

Kjonaas stated that the State Aid Rule making process is being appropriately addressed and could potentially be delayed to incorporate the Complete Streets standards. He mentioned that one possibility may be to include State Aid guidelines that address the Complete Streets standards.

Pederson communicated that State Aid should keep moving on the 30 rule changes being considered.

Kjonaas stated that a placeholder could be created within the State Aid Rules to address the Complete Streets standards for a limited time.

IV. Motion to adjourn until 8:30 AM Wednesday morning by Mathisen and seconded by Schoonhoven. Motion carried unanimously.

Meeting was adjourned at 3:45 PM.

2010 MUNICIPAL SCREENING BOARD FALL MEETING MINUTES October 26 & 27, 2010

Wednesday Morning Session, October 27, 2010

I. Chair Hulsether called the session to order at 8:35 AM.

Chair Hulsether stated that we will review Tuesday's business and take action on the following items:

A. Needs and Apportionment Data (Pages 40-85, Handout)

Chair Hulsether asked if there were any comments or changes to the needs and apportionment data before we sign the letter to the Commissioner.

Motion by Bot, seconded by Matthys to accept the needs and apportionment data as presented. Motion carried unanimously. The original letter to the Commissioner of Transportation was then signed by each Screening Board Member.

B. Research Account (Pages 110)

Chair Hulsether stated that in the past, a certain amount of money has been set aside by the Municipal Screening Board for research projects. The maximum amount to be set aside from the Municipal State Aid Street (MSAS) funds is ½ of 1 percent of the preceding year's apportionment sum. There was no additional discussion or comments.

Motion by Mathisen, seconded by Schoonhoven to approve an amount of \$636,577 (not to exceed ½ of 1% of the 2010 MSAS Apportionment sum of \$127,315,538) to be set aside from the 2011 Apportionment fund and be credited to the Research Account. Motion carried unanimously.

C. Transportation Revolving Loan Fund (Pages 111-112)

Chair Hulsether asked if there were any comments. If we do not want to have funds placed in this loan fund, then no motion is necessary. There was no discussion or comments.

No motion received.

D. Review, discuss and give direction to the Needs Study Task Force.

Chair Hulsether briefly reviewed yesterday's NSTF presentation provided by Gustafson and the idea of utilizing a facilitator to assist in the NSTF's future efforts.

Mathisen commended the NSTF for the work that has already been done.

Elwood communicated that the NSTF anticipates meeting several times prior to the spring Screening Board meeting and requested that a funding source for a facilitator be determined.

Matthys asked that the CEAM Executive Committee approve the selection of a facilitator.

Ahl suggested that a \$5,000 funding limit be established for compensating the facilitator.

Skallman informed everyone that costs up to \$100,000 could be authorized from the State Aid administrative account.

Ahl stated that maybe \$10,000 would be a more appropriate threshold.

Chair Hulsehter Hulsether asked for anymore discussion or questions and possibly a motion authorizing the compensation of a NSTF facilitator not to exceed \$10,000.

Motion by Elwood, seconded by Mathisen to authorize the hiring of an NSTF facilitator with State Aid administrative funds for an amount not to exceed \$10,000.

Matthys inquired on who would ultimately chose the facilitator.

Elwood stated that the NSTF Chairperson should select the facilitator.

Matthys added that the NSTF Chairperson's facilitator selection should be approved by the CEAM Executive Committee.

Previous motion was amended to include facilitator selection by the NSTF Chairperson with CEAM Executive Committee approval. Motion carried unanimously.

II. If necessary discussion of other items.

A. Continuation/discussion on report from Project Management Software Committee

Chair Hulsether opened the discussion with PMSC's report.

Voigt asked that a recommendation be provided by the Screening Board to authorize the use of each City's maintenance and/or construction (within project engineering reimbursement) allocations to fund the acquisition of the One Office project management software. Skallman asked for further clarification on which allocation funds would be utilized for this purpose.

Voigt stated that it may be beneficial to allow the use of construction funds outside of a particular project to purchase the software.

Mathisen stated that if construction funds are used, it may be more appropriate if the software expenditure is within a specific project's costs.

Keely offered that if may be best if State Aid staff determines which funds can be used to purchase the software.

Mathisen inquired on how compatible the One Office software is for other City related projects.

Pederson responded that the City of Bloomington is utilizing the software on every Public Works infrastructure project.

Elwood asked if action on this topic is necessary at this time.

Chair Hulsether asked for Skallman's input.

Skallman stated that action to direct State Aid staff would be beneficial.

Chair Hulsether asked for further discussion or a motion regarding this topic.

Elwood stated that he personally did not have enough information to currently proceed with action on this issue.

Motion by Mathisen, seconded by Prusak that State Aid staff further research this topic and determine how the Cities' purchase of the One Office software can be authorized.

Kjonaas added that State Aid has historically not allowed the purchase of computers or software with construction fund allocations.

Motion passed with two Screening Board members opposing (Elwood and Matthys).

- B. Continuation of State Aid Report Chair Hulsether asked for additional State Aid related items or discussion of items brought forward yesterday. No discussion was initiated.
- C. Continuation of Legislative Update

Chair Hulsether asked Sonnenberg, CEAM Legislative Committee Chair, to expand upon current and upcoming legislative topics. Sonnenberg stated that the recent CEAM Committee Strategic Planning meeting was beneficial in determining the direction and charge of the Legislative

Committee. Sonnenberg also mentioned that this committee is always open to thoughts and feedback from CEAM members in regards to any legislative items. During the upcoming State Legislature session, CEAM in conjunction with the League of Minnesota Cities will focus on items such as expansion of roadway improvement funding, potential Street Improvement District legislation (similar to sidewalks), changes to State Statute 429 (establishing an assessment amount threshold prior to the need for the benefits test, percentage of appraised value, other City assessment approaches, etc.), implementation of local option sales taxes, dedication of a portion of property taxes to transportation, repeal of State sales taxes on City purchases, and other relevant topics. However, due to the uncertainties associated with the forthcoming State budget deficit and new Governor/Legislature, issues such as tax reform, funding priorities, and Local Government Aid's future will most likely be the priorities of the session. Sonnenberg asked for any input or questions.

Mathisen asked if the State Statute 429 revisions will only be looked at with respect to project benefits incurred by immediately adjacent properties.

Sonnenberg verified that the revisions would only be applicable to immediately adjacent properties.

Mathisen asked if assessments could continue to be administered on a front footage basis.

Elwood stated that the City of Minneapolis utilizes an influence area approach for some improvement projects.

Schoonhoven suggested that the previously mentioned percentage of appraised value criteria should only be applicable to land values.

Elwood inquired on the timeline of upcoming legislative activities.

Sonnenberg stated that the Legislative Committee would be meetings meeting prior to the end of the year and could gather input from City representatives shortly thereafter.

Strauss asked if anyone is familiar with how the State of Wisconsin allows for the administration of public improvement assessments.

Sonnenberg replied that Wisconsin can administer assessments through their Police Powers provision for the common benefit of all.

Strauss inquired on the possibility of Minnesota implementing changes to administer assessments similar to Wisconsin.

Sonnenberg mentioned that the focus may be on the percentage of value criteria to determine the need for the assessments benefit test.

Chair Hulsether asked for further legislative item questions.

Schoonhoven asked about the potential authorization of local option sales taxes.

Sonnenberg replied that the focus of the CEAM Legislative Committee will be on expediting local option sales tax measures that pertain to street and transportation improvements. Currently, State Legislature approval is required for all local option sales taxes.

Schoonhoven inquired on the potential of authorizing local option sales tax for specific causes.

Sonnenberg responded that potential approval of any measures pertaining to local option sales taxes is an unknown and that legislative action regarding these issues has historically been very difficult.

Kjonaas mentioned that amending State Statute 429 to address the trade publication requirement should be addressed by the Legislature. Per Kjonaas, including the State Aid website as an acceptable advertisement publication outlet would seem to be appropriate.

Schoonhoven asked if the State Aid website could be utilized for any City project.

Kjonaas answered that the only requirement is that the advertisement be submitted by the City Engineer.

Kjonaas mentioned that another legislative issue is the new timber haulers laws and how these measures may impact bridge inspections and/or loadings.

Sonnenberg asked Kjonaas to provide him additional information outlining this issue.

Chair Hulsether asked for any other legislative topics or questions.

D. Continuation of Complete Streets Discussion

Chair Hulsether asked for additional Complete Street items or discussion of items brought forward yesterday. Pederson replied that she did not have anything to add beyond what has already been communicated.

Mathisen inquired on what is exactly being mandated by the Complete Streets legislation.

Skallman responded that nothing is being mandated at this point and that the legislation only applies to Mn/DOT Trunk Highways with expansion beyond that not being in the foreseeable future.

Mathisen asked if the conversion of 4-lane roadway sections to 3-lane would be considered a Complete Streets activity.

Skallman answered that revising roadway typical sections could be considered positive to Complete Streets advocates and that local officials should take credit for these changes as they may benefit the Complete Streets approach.

Bot inquired on whether the Unencumbered Construction Fund balance was continuing to grow and if advancements should be further encouraged.

Ahl stated that typically a dozen Cities pursue advancements on an annual basis.

Kjonaas stated that the Unencumbered Construction Fund balance is acceptable and the advancement process is functioning well.

Bot asked that Kjonaas report on the Unencumbered Construction Fund balance at the spring Screening Board meeting.

Ahl asked that the Screening Board formally direct the Unencumbered Construction Funds Subcommittee to review the current balance and potential balance reduction measures.

Motion by Bot, seconded by Mathisen to direct the Unencumbered Construction Funds Subcommittee to review the current balance and potential balance reduction measures. Motion carried unanimously.

III. Other Discussion Topics

Mathisen inquired on the most recent sign retro reflectivity implementation timeframes.

Kjonaas responded that the Cities must have a sign assessment or management method in place by the end of 2011 and then replace regulatory, warning, and ground-mounted guide signs (except street name) by 2015.

Bloom offered to send anyone the LRRB Sign Retro Reflectivity Toolkit.

Mathisen inquired on whether others received an attorney's letter asking for information regarding the use of Best Value Contracting.

Matthys stated that he had received a similar letter.

IV. Chair Hulsether said he would entertain a motion for adjournment.

Motion by Strauss, seconded by Matthys to adjourn the meeting at 9:32 AM. Motion approved unanimously.

Respectfully submitted,

at 1

Municipal Screening Board Secretary Hutchinson City Engineer

UNIT PRICE STUDY

The unit price study was done annually until 1997. In 1996, the Municipal Screening Board made a motion to conduct the Unit Price study every two years, with the ability to adjust significant unit price changes on a yearly basis. There were no changes in the unit prices in 1997. In 1999 and 2001, a construction cost index was applied to the 1998 and 2000 contract prices. In 2003, the Screening Board directed the Needs Study Subcommittee to use the percent of increase in the annual National Engineering News Record Construction Cost Index to recommend Unit Costs to the Screening Board. In 2007, the Municipal Screening Board made a motion to conduct the Unit Price study every three years with the option to request a Unit Price study on individual items in "off years".

These prices will be applied against the quantities in the Needs Study computation program to compute the 2011 construction (money) needs apportionment.

State Aid bridges are used to determine the unit price. In addition to normal bridge materials and construction costs, prorated mobilization, bridge removal and riprap costs are included if these items are included in the contract. Traffic control, field office, and field lab costs are not included.

MN/DOT's hydraulic office furnished a recommendation of costs for storm sewer construction and adjustment based on 2010 construction costs.

MN/DOT railroad office furnished a letter detailing railroad costs from 2010 construction projects.

Due to lack of data, a study is not done for traffic signals, maintenance, and engineering. Every segment, except those eligible for THTB funding, receives needs for traffic signals, engineering, and maintenance. All deficient segments receive street lighting needs. The unit prices used in the 2010 needs study are found in the Screening Board resolutions included in this booklet.

apportionment

The ENR CCI percent of increase from the previous year is used to calculate the Unit Prices in the bolded years. Example: The 2010 Annual Percent of Increase of 2.68% will be used in the 2011 Needs Study to compute the January 2012

of Increase from Base YearAnnual Percent of IncreaseAverage Percent of Increase 4732 4732 0 fincrease 0 fincrease 4732 4732 2.18 0 fincrease 4732 4835 3.10 3.80 4835 3.10 3.80 3.80 5210 5210 3.80 3.80 5471 1.16 2.18 3.07 5220 5.210 2.35 3.07 5826 3.67 3.67 3.06 5826 3.67 3.67 5826 3.67 3.67 5826 3.67 3.67 5826 3.67 3.67 5826 3.67 3.67 5826 5338 2.336 5826 5.33 2.336 5826 5.33 2.60 5826 5.33 2.67 6629 2.67 65343 6.29 7115 2.72 7751 4.10 7751 4.10 7751 4.10 7751 4.10 7751 4.10 7867 8310 8570 3.13 8570 3.13 8800 3.13 8800 3.13 8800 3.13 870 3.13 870 3.13 870 3.13 870 3.13 870 3.13 870 3.13 870 3.13 870 3.13 </th <th></th> <th>Year end Percent</th> <th></th> <th>Five Year</th> <th>Ten Year Average</th>		Year end Percent		Five Year	Ten Year Average

ENR Construction Cost Index Percent of Increase

ENR Construction Cost Index for 2010 Used in the 2011 Needs Study for the January 2012 allocation

In 2009, the annual average CCI increased 8570% from the base year of 1913. In 2010, the annual average CCI increased 8800% from the base year of 1913. The annual CCI increased 2.68% in 2010. This is computed by:

(8800-8570) *100 /8570 = 2.68%

ENR Construction Cost Index for 2009 Used in the 2010 Needs Study for the January 2011 allocation

In 2008, the annual average CCI increased 8310% from the base year of 1913. In 2009, the annual average CCI increased 8570% from the base year of 1913. The annual CCI increased 3.13% in 2009. This is computed by:

(8570-8310) *100 /8310 = 3.13%

Unit Costs used in the 2009 Needs Study to compute the January 2010 allocation were based on actual State Aid projects awarded in 2008.

ANNUAL MAINTENANCE NEEDS COST

The prices below are used to compute the maintenance needs on each segment. Each street, based on its existing data, receives a maintenance need. This amount is added to the segment's street needs. The total statewide maintenance needs based on these costs in 2010 was \$34,294,796 or 0.69% of the total Needs. For example, an urban road segment with 2 traffic lanes, 2 parking lanes, over 1,000 traffic, storm sewer and one traffic signal would receive \$11,700 in maintenance needs per mile.

2.68% Construction Cost Index from the Engineering News Record applied to all maintenance needs costs EXISTING FACILITIES ONLY

"Parking Lane Per Mile" shall never exceed two lanes, and is obtained from the following formula:

(Existing surface width minus (the # of traffic lanes x 12)) / 8 = # of parking lanes.

Existing # of Traffic lanes	Existing Surface Width	# of Parking Lanes for Maintenance Computations
2 Lanes	less than 32' 32' - 39' 40' & over	0 1 2
4 Lanes	less than 56' 56' - 63' 64' & over	0 1 2

This item was 0.69% of the total needs last year

Minnesota Department of Transportation

Memo

Bridge Office 3485 Hadley Avenue North Oakdale, MN 55128-3307

Date:	April 27, 2011
To:	Marshall Johnston Manager, Municipal State Aid Street Needs Section
From:	Juanita Voigt State Aid Hydraulic Specialist
Phone:	(651) 366-4469
Subject:	State Aid Storm Sewer Construction Costs for 2010

We have completed our analysis of storm sewer construction costs incurred for 2010 and the following assumptions can be utilized for planning purposes per roadway mile:

- Approximately \$301,272 for new construction, and
- > Approximately \$95,576 for adjustment of existing systems

The preceding amounts are based on the average cost per mile of State Aid storm sewer using unit prices from approximately 146 plans for 2010.

CC: Andrea Hendrickson (file)

Memo

Office of Freight and Commercial Vehicle Operations

April 7, 2011

To: Marshall Johnson Needs Unit – State Aid

- From: Susan H. Aylesworth Manager, Rail Administration Section
- Subject: Projected Railroad Grade Crossing Improvements – Cost for 2011

We have projected 2010 costs for railroad/highway improvements at grade crossings. For planning purposes, we recommend using the following figures:

Signals & Gates (single track, low speed, average price)*	\$275,000.00
Signals & Gates (multiple track, high/low speed, average price)* \$27	5,000 - \$350,000.00
Signs (advance warning signs and crossbucks)	\$2,500 per crossing
Pavement Markings (tape)	\$7,500 per crossing
Pavement Markings (paint)	\$2,500 per crossing
Crossing Surface (concrete, complete reconstruction)	\$1,800 per track ft.

*Signal costs include sensors to predict the motion of train or predictors which can also gauge the speed of the approaching train and adjust the timing of the activation of signals.

Our recommendation is that roadway projects be designed to carry any improvements through the crossing area – thereby avoiding the crossing acting as a transition zone between two different roadway sections or widths. We also recommend a review of all passive warning devices including advance warning signs and pavement markings – to ensure compliance with the MUTCD and OFCVO procedures.

UNENCUMBERED CONSTRUCTION FUNDS SUBCOMMITTEE

Meeting Minutes Thursday, April 7, 2011

Welcome – Chuck Ahl

Chuck Ahl called the meeting to order at 10:20 am. In attendance were Chuck Ahl (Maplewood), chair of the UCFS; Shelly Pederson (Bloomington) of the UCFS; Jeff Hulsether (Brainerd) of the UCFS; Julie Skallman, Marshall Johnston, Julee Puffer, and Joan Peters from Mn/DOT. Jeff Hulsether was elected Secretary of the UCFS. Chairman Ahl reviewed the charge from the Municipal Screening Board which was "to direct the Unencumbered Construction Funds Subcommittee to review the current balance and potential balance reduction measures".

Review of Historical Information on Construction fund Balance

Marshall Johnston reviewed historical year end balances along with the relationships between balance and construction allotments and the relationships between balances and various needs adjustments and balance reduction measures. Emphasis was given to the ratio between the amount spent and the amount received each year and it was noted that 1993 was the first year that there was more spent then received. There was a discussion on how much of a fund balance is desirable and that over any 3 or 4 year period there should be the goal of an average spent/received ratio of 1.0. Joan Peters discussed the Advance Guidelines which has a \$20 million minimum balance threshold. Julie Skallman stated that State Aid could support and defend a balance of about ½ of the annual allocation, or \$50 million, at the Legislature.

There was considerable discussion regarding advances and the need for more detailed discussions at pre-screening board meetings to inform all city engineers of the advance process and associated needs adjustments and to encourage more use of advances.

Julie Skallman stated that some cities may be reluctant to develop a project without assurances that advance funds will be available.

Chairman Ahl stated that one of the options before the Committee is to liberalize the guidelines for advances.

Shelly stated that even though the UCF balance has been growing it appears that previous measures to reduce the balance have been effective.

Joan Peters stated that there is a potential reduction in construction fund balances by closing out projects that are still open and potential requests for the balances on short payments. Short payments occur when there is an insufficient fund balance to pay an entire payment request. Recently, the balances have been paid when the next year's allocation is received. Prior to this practice, the city needed to resubmit a payment request for the balance.

Items that affect year end Construction Fund Balance

Marshall reviewed local decisions that affect the year end Construction Fund Balance such as general fund advances, local construction programs, saving for large projects, and spending local or federal funds on a MSAS route.

Current Adjustments

Marshall reviewed the current adjustments which include the Unencumbered Construction Fund Balance adjustment, the Excess Balance Redistribution as Low Balance Incentive, the Bond Account adjustment, the Non-existing Bridge adjustment, the Right of Way Acquisition adjustment, the Retaining Wall adjustment, and individual adjustment. Marshall pointed out that the Unencumbered Construction Fund Balance adjustment and Bond Account adjustment can be either positive or negative. If a city receives and spends an advance their balance goes negative which results in a positive adjustment. Similarly, bond proceeds applied to a State Aid project qualify for a positive adjustment but can be offset by proceeds not applied to a State Aid project which result in a negative adjustment. There was considerable discussion related to advances and the bond account adjustments. Marshall also noted that the "after the fact" needs for non-existing bridges, right of way, and retaining walls generated \$13.75 of allocation last year for each \$1,000 of expenditure. At this rate it would take almost 73 years of needs adjustment and associated allocation to reimburse the expense, but the adjustment only lasts for 15 years which returns about 20% of the original expense. Marshall pointed out that the value of the needs have been diluted over the years and could have been as high as \$40 or \$50 per \$1,000 when the after the fact adjustment was created. Discussion continued related to extending the period for after the fact adjustments

Subcommittee Discussion – All

Chairman Ahl started the discussion by noting that advances could be effective in reducing fund balances but not many cities take advantage of the opportunity and questioned if there is a problem with the fund balance and if we should liberalize the guidelines.

Marshall reviewed the history of advances, the rules related to advances and a spreadsheet of individual city fund balances. Approximately 30 cities currently have a negative fund balance. Marshall then reviewed the history of excess balance adjustments and concluded with a spreadsheet that tabulated the history of the Excess Balance Redistribution as Low Balance Incentive since it was enacted in 2004.

Chuck stated that he had heard several comments that the redistribution is working and we should not change the rules.

Shelly Pederson stated that the excess balance adjustment is working and there doesn't appear to be a problem with only a couple of cities having an excess balance adjustment.

Chuck stated that there is about \$20 million out there that can be put to work and suggested that cities should be encouraged to use the available funding. Marshall reviewed the history of advances which started at a 5 times annual allocation or \$4 million and has been adjusted downwards several times since. There was considerable discussion about the maximum allowable advances.

Recommendations to Municipal Screening Board

Advance Guidelines - The Committee recommended that allowable advances be increased to 4 times the annual construction allocation or \$3 million, whichever is less.

Excess Balance Redistribution as Low Balance Incentive – The Committee discussed the history of this adjustment and recommended no change citing the success with fewer cities carrying high balances.

Length of Adjustments – The Committee recommended that the length of "After the Fact" needs adjustments for non-existing bridges, right of way, and retaining walls be increased from 15 years to 30 years effective immediately for project expenses submitted this year that will be first eligible for a needs adjustment in 2012.

Other Items – The Committee recommended that there be a discussion at each of the pre-screening board meetings to:

- (1) Gauge the interest among cities to purchase part of a Road Rating Van or coordinate with the counties to rent and use the van they recently purchased.
- (2) Distribute information to each city related to open projects and short payments they have on the books that could be requested to lower the Unencumbered Construction Funds balance.
- (3) Have a discussion about advance allocations and State Aid bonding as funding options.

Respectfully submitted,

he mouberte Jeff Hulsether

Jeff Hulsether UCFS Secretary Brainerd City Engineer

2011 NEEDS STUDY SUBCOMMITTEE April 11, 2011

The 2011 Needs Study Subcommittee was called to order at 1:10 p.m. on Monday, April 11, 2011, by Chair Maurer. Attendees included the following:

Terry Maurer (Chair), Arden Hills City Engineer; Katy Gehler-Hess, Northfield City Engineer; Russ Matthys, Eagan City Engineer

Minnesota Department of Transportation personnel:

Julie Skallman, State Aid Engineer; Rick Kjonaas, Deputy State Aid Engineer; Marshall Johnston, Manager, Municipal State Aid Needs Unit; Julee Puffer, Municipal State Aid Needs; Deb Hall-Kuglin, Municipal State Aid Needs

Johnston summarized the purpose of the meeting; review and recommend prices to be used to compute 2011 maintenance needs and construction needs apportionments for the Municipal State Aid System. The Construction Cost Index (nationwide) from the Engineering News Record (ENR) is typically referenced as a guide for annual cost differences. The 2010 Annual Percent of Increase of 2.68% is suggested to be used in the 2011 Needs Study. An actual Unit Price study is completed every three years with the next study scheduled to occur in 2012.

Johnston reviewed the 2010 annual maintenance needs costs and the history of annual maintenance needs costs.

Motion by Maurer, seconded by Matthys, to suggest an update of Annual Maintenance Needs Costs as follows. Motion approved unanimously.

	Under	Over
	1,000 ADT	1,000 ADT
Traffic Lane Per Mile	\$2,000	\$3,300
Parking Lane Per Mile	\$2,000	\$2,000
Median Strip Per Mile	\$ 725	\$1,350
Storm Sewer Per Mile	\$ 725	\$ 725
Per Traffic Signal	\$ 725	\$ 725
Normal MSAS Streets		
Minimum Allowance Per Mile	\$6,550	\$6,550

Johnston reviewed the individual Unit Prices, including their histories and analysis performed by department personnel, relevant to the calculation of the construction needs.

Motion by Gehler-Hess, seconded by Maurer, to suggest the following updates of Unit Prices. Motion approved unanimously.

Grading/Excavation	\$5.05 per cubic yard
Aggregate Base	\$10.40 per ton

All Bituminous Base & Surface Curb and Gutter Construction	\$60.00 per ton \$11.30 per linear foot
Sidewalk Construction	\$28.60 per square yard
Storm Sewer Adjustment	\$95,600 per mile
Storm Sewer Construction	\$301,300 per mile
Lighting	\$100,000 per mile
Signals	\$136,000 per mile
Railroad Crossings	
Signs	\$2,500 per unit
Pavement Marking	\$2,500 per unit
Signals (Low Speed)	\$275,000 per unit
Signals & Gates (High Speed)	\$300,000 per unit
Concrete Crossing Material	\$1,800 per foot/track
Bridges	\$115 per square foot
Railroad Bridges over Highways	
First Track	\$10,200 per linear foot
Additional Tracks	\$8,500 per linear foot

Motion by Maurer, seconded by Matthys, to suggest the use of the County State Aid Highway Needs Study Subcommittee's recommendation of updates of Annual Maintenance Needs Costs for box culvert costs. Motion approved unanimously.

Johnston updated the status of the Needs Study Task Force, reminding the committee of the likelihood of significant revisions to the method of determining future MSA needs. Discussion occurred regarding specific Unit Price recommendations, including Right of Way needs and the inclusion of landscaping and retaining wall costs, as well as actual Engineering costs as a percentage of the construction costs.

Motion by Gehler-Hess, seconded by Maurer, to suggest the following updates of Unit Price Recommendations. Motion approved unanimously.

Right of Way (Needs Only) Engineering \$100,000 per acre 22 %

Motion by Matthys, seconded by Maurer, to suggest the Needs Study Task Force evaluate actual Engineering costs as a percentage of the construction costs of Municipal State Aid projects and establish a recommended Unit Price as a component of their final task force recommendation to the Municipal Screening Board. Motion approved unanimously.

Motion by Maurer, seconded by Gehler-Hess, to recommend the completion of a Traffic Signals Unit Price Study for determining future construction needs apportionments. Motion approved unanimously.

The 2011 Needs Study Subcommittee was concluded at 3:00 p.m.

OTHER

TOPICS

MUNICIPAL STATE AID CONSTUCTION ACCOUNT ADVANCE GUIDELINES

State Aid Advances

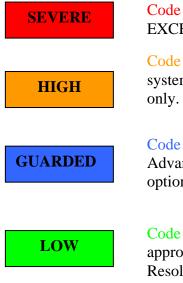

M.S. 162.14 provides for municipalities to make advances from future year's allocations for the purpose of expediting construction. This process not only helps reduce the construction fund balance, but also allows municipalities to fund projects that may have been delayed due to funding shortages.

The formula used to determine if advances will be available is based on the current fund balance, expenditures trends, repayments and the \$20,000,000 recommended threshold. The threshold can be administratively adjusted by the State Aid Engineer and reported to the Screening Board at the next Screening Board meeting.

The process used for advancing is dependent on the code levels which are listed below. Code levels for the current year can be obtained from the SAF website in the "Advances" area.

State Aid Advance Code Levels

Guidelines for advances are determined by the following codes.

Code RED - SEVERE- Fund Balances too low. NO ADVANCES - NO EXCEPTIONS

Code ORANGE - HIGH - Fund Balance below acceptable levels. Priority system in use. Advances approved thru DSAE and State Aid Engineer only. Resolution required. Approved projects are automatically reserved.

Code BLUE- GUARDED - Fund balance low; balances reviewed monthly. Advances on first-come, first-serve basis. Resolution required. Reserve option available only prior to bid advertisement.

Code GREEN - LOW - Fund Balance above acceptable level. Advances approved on first-come, first-serve basis while funds are available. Resolution required. High priority projects reserved; others optional.

General Guidelines for State Aid & Federal Aid Advance Construction

Advancing occurs once a cities account balance is zero. A City Council Resolution must be received by State Aid Finance before any funds will be advanced. Once the resolution is received by SAF, the approved amount will appear in the "Available to Advance" column on the cities Status Report in the State Aid Accounting System (SAAS).

Advances are not limited to the projects listed on the resolution. Project payments are processed in the order received by SAF until the maximum advance amount is reached. Resolutions are good for year of submission only and can not be submitted for multiple years. Advances are repaid from next year's allocation until fully repaid.

Advance funding is not guaranteed. A "Request to Reserve" funding form can be submitted to ensure funds will be available for your project. Once approved, a signed copy will be returned to the Municipality.

A Sample Resolution and a Request to Reserve Funding form can be obtained from SAF website - <u>http://www.dot.state.mn.us/safinance</u>. Mail completed forms to Sandra Martinez in State Aid Finance. Check with your DSAE to see if they want a copy of the forms.

Priority System

A Priority System can be required if the fund balances drop below an acceptable level (Red & Orange Level). This process starts the fall proceeding the advance year. Each city will be required to submit projects to their DSAE for prioritization within the district. The DSAE will submit the prioritized list to SALT for final prioritization.

Requests should include a negative impact statement if project had to be delayed or advance funding was not available. In addition, include the significance of the project.

Priority projects include, but are not limited to projects where agreements have mandated the city's participation, or projects with advanced federal aid. Small over-runs and funding shortfalls may be funded, but require State Aid approval.

Advance Limitations

<u>Statutory</u> - None Ref. M.S.162.14, Subd 6. <u>State Aid Rules</u> - None Ref. State Aid Rules 8820.1500, Subp 10& 10b. <u>State Aid Guidelines</u> Advance is limited to three times the municipalities' last construction allotment or \$2,000,000, whichever is less. The limit can be administratively adjusted by the State Aid Engineer.

Limitation may be exceeded due to federal aid advance construction projects programmed by the ATP in the STIP where State Aid funds are used in lieu of federal funds. Repayment will be made at the time federal funds are converted. Should federal funds fail to be programmed, or the project (or a portion of the project) be declared federally ineligible, the local agency is required to pay back the advance under a payment plan mutually agreed to between State Aid and the Municipality.

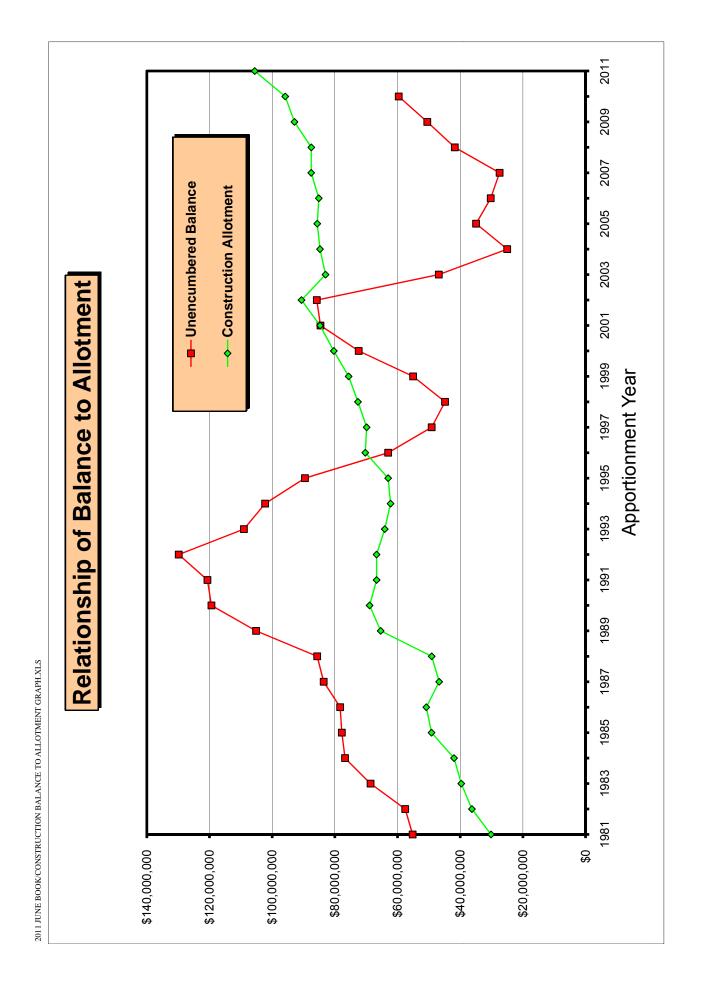

RELATIONSHIP OF CONSTRUCTION BALANCE TO CONSTRUCTION ALLOTMENT

The amount spent on construction projects is computed by the difference between the previous year's and current years unencumbered construction balances plus the current years construction apportionment.

* The date for the unencumbered balance deduction was changed from June 30 to September 1. Effective September 1,1986.

** The date for the unencumbered balance deduction was changed from September 1 to December 31. Effective December 31,1996.

MSAS/Books\2011 June Book\2011 Apportionment Rankings

2011 APPORTIONMENT RANKINGS

Rankings are from highest apportionment per Needs mile to lowest. Bridges in some cities increase the costs.

<u>COUNTY HIGHWAY TURNBACK</u> <u>POLICY</u>

Definitions:

County Highway - Either a County State Aid Highway or a County Road

County Highway Turnback- A CSAH or a County Road which has been released by the county and designated as an MSAS roadway. A designation request must be approved and a Commissioner's Order written. A County Highway Turnback may be either County Road (CR) Turnback or a County State Aid (CSAH) Turnback. (See Minnesota Statute 162.09 Subdivision 1). A County Highway Turnback designation has to stay with the County Highway turned back and is not transferable to any other roadways.

Basic Mileage- Total improved mileage of local streets, county roads and county road turnbacks. Frontage roads which are not designated trunk highway, trunk highway turnback or on the County State Aid Highway System shall be considered in the computation of the basic street mileage. A city is allowed to designate 20% of this mileage as MSAS. (See Screening Board Resolutions in the back of the most current booklet).

MILEAGE CONSIDERATIONS

County State Aid Highway Turnbacks

A CSAH Turnback **is not** included in a city's basic mileage, which means it **is not** included in the computation for a city's 20% allowable mileage. However, a city may draw Construction Needs and generate allocation on 100% of the length of the CSAH Turnback

County Road Turnbacks

A County Road Turnback **is** included in a city's basic mileage, so it **is** included in the computation for a city's 20% allowable mileage. A city may also draw Construction Needs and generate allocation on 100% of the length of the County Road Turnback.

Jurisdictional Exchanges

County Road for MSAS

Only the **extra** mileage a city receives in an exchange between a County Road and an MSAS route **will be** considered as a County Road Turnback.

If the mileage of a jurisdictional exchange is **even**, the County Road **will not be** considered as a County Road Turnback.

If a city receives **less** mileage in a jurisdictional exchange, the County Road **will not be** considered as a County Road Turnback.

CSAH for MSAS

Only the **extra** mileage a city receives in an exchange between a CSAH and an MSAS route **will be** considered as a CSAH Turnback.

If the mileage of a jurisdictional exchange is **even**, the CSAH **will not be** considered as a CSAH Turnback.

If a city receives **less** mileage in a jurisdictional exchange, the CSAH **will not be** considered as a CSAH Turnback

NOTE:

When a city receives **less** mileage in a CSAH exchange it will have less mileage to designate within its 20% mileage limitation and may have to revoke mileage the following year when it computes its allowable mileage.

Explanation: After this exchange is completed, a city will have more CSAH mileage and less MSAS mileage than before the exchange. The new CSAH mileage was included in the city's basic mileage when it was MSAS (before the exchange) but is not included when it is CSAH (after the exchange). So, after the jurisdictional exchange the city will have less basic mileage and 20% of that mileage will be a smaller number.

If a city has more mileage designated than the new, lower 20% allowable mileage, the city will be over designated and be required to revoke some mileage. If a revocation is necessary, it will not have to be done until the following year after a city computes its new allowable mileage.

MSAS designation on a County Road

County Roads can be designated as MSAS. If a County Road which is designated as MSAS is turned back to the city, it will not be considered as County Road Turnback.

MISCELLANEOUS

A CSAH which was previously designated as Trunk Highway turnback on the CSAH system and is turned back to the city will lose all status as a TH turnback and only be considered as CSAH Turnback.

A city that had previously been over 5,000 population, lost its eligibility for an MSAS system and regained it shall revoke all streets designated as CSAH at the time of eligibility loss and consider them for MSAS designation. These roads will not be eligible for consideration as CSAH turnback designation.

In a city that becomes eligible for MSAS designation for the first time all CSAH routes which serve only a municipal function and have both termini within or at the municipal boundary, should be revoked as CSAH and considered for MSAS designation. These roads will not be eligible for consideration as CSAH turnbacks.

For MSAS purposes, a County or CSAH that has been released to a city cannot be local road for more than two years and still be considered a turnback. N:\MSAS\Word Documents\Instructions\COUNTY HIGHWAY TURNBACK POLICY.doc

Minnesota Department of Transportation

State Aid for Local Transportation

395 John Ireland Boulevard, MS 500 Saint Paul, MN 55155

March 24, 2011

Ms Cindy Voigt Duluth City Engineer Room 211 City Hall 411 W. 1st Street Duluth, MN 55802

RE: City of the First Class

Dear Ms Voigt:

The 2010 federal census has determined the population for the city of Duluth to be 86,265.

State Statute 410.01 defines a First Class City as:

Those having more than 100,000 inhabitants provided that once a city is defined to be of the first class, it shall not be reclassified unless its population decreases by 25 percent from the census figures which last qualified the city for inclusion in the class...

Based on the above statute, Duluth will be considered as a first class city until its population decreases 25% from the last census which qualified the city. The 1970 census was the last that counted Duluth as over 100,000. The population in 1970 was 100,578. A 25% decrease of that is 75,433.

Based on the above statute and the 2010 population, I am pleased to inform you that Duluth will continue to be a permanent member of the Municipal Screening Board.

I am looking forward to your continued input into the decisions made by the Municipal Screening Board.

Sincerely,

Julie Skallman

Julie Skallman State Aid Engineer

cc: Jean Keely, Chair Municipal Screening Board Walter Leu, District State Aid Engineer File

An Equal Opportunity Employer

Minnesota Department of Transportation

State Aid for Local Transportation

395 John Ireland Boulevard, MS 500 Saint Paul, MN 55155

March 29, 2011

Mr. Richard Freese Rochester City Engineer 201 4th Street SE Rochester, MN 55904

RE: City of the First Class

An Equal Opportunity Employer

Dear Mr. Freese:

The 2010 federal census has determined the population for the city of Rochester at 106,769. State Statute 410.01 defines a First Class City as:

Those having more than 100,000 inhabitants provided that once a city is defined to be of the first class, it shall not be reclassified unless its population decreases by 25 percent from the census figures which last qualified the city for inclusion in the class...

State Statute 162.13 subd.3 states in part:

Screening board. ... Upon receipt of the information the commissioner shall appoint a board of city engineers. The board shall be composed of one engineer from each state highway construction district, and in addition thereto, one engineer from each city of the first class.

Because the City of Rochester is now considered a First Class City, and with the concurrence of the Commissioner of Transportation, I am appointing Rochester as a permanent member of the Municipal Screening Board.

The city's representative on the Board can be either the city engineer or an engineer appointed by him. If you intend to appoint a representative in your place, I would like his name as soon as you make the appointment.

The next meeting of the Municipal Screening Board is on May 24th and 25th, 2011.

Among its duties, the MSB helps to determine the distribution of the municipalities 9% of the Highway Users Tax Distribution Fund.

I look forward to having your city's input and insight into the important decisions that come before the Municipal Screening Board.

Sincerely,

Julie Skallman

Julie Skallman State Aid Engineer

cc: Jean Keely, Chair Municipal Screening Board Steve Kirsch, District State Aid Engineer File

2011 Schedule STATUS OF MUNICIPAL TRAFFIC COUNTING

The current Municipal State Aid Traffic Counting resolution reads:

That future traffic data for State Aid Needs Studies be developed as follows:

- 1. The municipalities in the metropolitan area cooperate with the State by agreeing to participate in counting traffic every two or four years at the discretion of the city.
- 2. The cities in the outstate area may have their traffic counted and maps prepared by State forces every four years, or may elect to continue the present procedure of taking their own counts and have state forces prepare the maps.
- 3. Any city may count traffic with their own forces every two years at their discretion and expense, unless the municipality has made arrangements with the Mn/DOT district to do the count.

In 1998, cities were given the option of counting on a 2 or 4 year cycle. In 2008, cities were given the option to revise their 2 or 4 year cycle as well as the count year. In 2009, cities were given the option to move to a 4 year cycle with the option to count a subset of locations in the "off cycle" or 2nd year of a 4 year cycle.

CURRENT RESOLUTIONS OF THE MUNICIPAL SCREENING BOARD

May 2011

Bolded wording (except headings) are revisions since the last publication of the Resolutions

BE IT RESOLVED:

ADMINISTRATION

Appointments to Screening Board - Oct. 1961 (Revised June 1981)

That annually the Commissioner of Mn/DOT will be requested to appoint three (3) new members, upon recommendation of the City Engineers Association of Minnesota, to serve three (3) year terms as voting members of the Municipal Screening Board. These appointees are selected from the Nine Construction Districts together with one representative from each of the three (3) major cities of the first class.

Screening Board Chair, Vice Chair and Secretary- June 1987 (Revised June, 2002)

That the Chair Vice Chair, and Secretary, nominated annually at the annual meeting of the City Engineers association of Minnesota and subsequently appointed by the Commissioner of the Minnesota Department of Transportation shall not have a vote in matters before the Screening Board unless they are also the duly appointed Screening Board Representative of a construction District or of a City of the first class.

Appointment to the Needs Study Subcommittee - June 1987 (Revised June 1993)

That the Screening Board Chair shall annually appoint one city engineer, who has served on the Screening Board, to serve a three year term on the Needs Study Subcommittee. The appointment shall be made at the annual winter meeting of the City's Engineers Association. The appointed subcommittee person shall serve as chair of the subcommittee in the third year of the appointment.

Appointment to Unencumbered Construction Funds Subcommittee - Revised June 1979

That the Screening Board past Chair be appointed to serve a three-year term on the Unencumbered Construction Fund Subcommittee. This will continue to maintain an experienced group to follow a program of accomplishments.

Appearance Screening Board - Oct. 1962 (Revised Oct. 1982)

That any individual or delegation having items of concern regarding the study of State Aid Needs or State Aid Apportionment amounts, and wishing to have consideration given to these items, shall, in a written report, communicate with the State Aid Engineer. The State Aid Engineer with concurrence of the Chair of the Screening Board shall determine which requests are to be referred to the Screening Board for their consideration. This resolution does not

abrogate the right of the Screening Board to call any person or persons before the Board for discussion purposes.

Screening Board Meeting Dates and Locations - June 1996

That the Screening Board Chair, with the assistance of the State Aid Engineer, determine the dates and locations for that year's Screening Board meetings.

Research Account - Oct. 1961

That an annual resolution be considered for setting aside up to $\frac{1}{2}$ of 1% of the previous years Apportionment fund for the Research Account to continue municipal street research activity.

Soil Type - Oct. 1961 (Revised June, 2005)

That the soil type classification as approved by the 1961 Municipal Screening Board, for all municipalities under Municipal State Aid be adopted for the 1962 Needs Study and 1963 apportionment on all streets in the respective municipalities. Said classifications are to be continued in use until subsequently amended or revised by using the following steps:

- a) The DSAE shall have the authority to review and approve requests for Soils Factor revisions on independent segments (if less than 10% of the MSAS system). Appropriate written documentation is required with the request and the DSAE should consult with the Mn/DOT Materials Office prior to approval.
- b) If greater than 10% of the municipality's MSAS system mileage is proposed for Soil Factor revisions, the following shall occur: Step 1. The DSAE (in consultation with the Mn/DOT Materials Office) and Needs Study Subcommittee will review the request with appropriate written documentation and make a recommendation to the Screening Board. Step 2. The Screening Board shall review and make the final determination of the request for Soils Factor revisions.

That when a new municipality becomes eligible to participate in the MSAS allocation, the soil type to be used for Needs purposes shall be based upon the Mn/DOT Soils Classification Map for Needs purposes. Any requests for changes must follow the above process.

Improper Needs Report - Oct. 1961

That the State Aid Engineer and the District State Aid Engineer are requested to recommend an adjustment of the Needs reporting whenever there is a reason to believe that said reports have deviated from accepted standards and to submit their recommendations to the Screening Board, with a copy to the municipality involved, or its engineer.

New Cities Needs - Oct. 1983 (Revised June, 2005)

That any new city having determined its eligible mileage, but has not submitted its Needs to the DSAE by December 1, will have its money Needs determined at the cost per mile of the lowest other city.

Unit Price Study- Oct. 2006

That the Unit Price Study go to a 3 year (or triennial) cycle with the Unit Prices for the two 'off years' to be set using the Engineering News Record construction cost index. The Screening Board may request a Unit Price Study on individual items in the 'off years' if it is deemed necessary.

Construction Cut Off Date - Oct. 1962 (Revised 1967)

That for the purpose of measuring the Needs of the Municipal State Aid Street System, the annual cut off date for recording construction accomplishments shall be based upon the project award date and shall be December 31st of the preceding year.

<u>Construction Accomplishments</u> - Oct. 1988 (Revised June 1993, October 2001, October 2003)

That when a Municipal State Aid Street is constructed to State Aid Standards, said street shall be considered adequate for a period of 20 years from the project award date or encumbrance of force account funds.

That in the event sidewalk or curb and gutter is constructed for the total length of the segment, those items shall be removed from the Needs for a period of 20 years.

All segments considered deficient for Needs purposes and receiving complete Needs shall receive street lighting Needs at the current unit cost per mile.

That if the construction of a Municipal State Aid Street is accomplished, only the Construction Needs necessary to bring the segment up to State Aid Standards will be permitted in subsequent Needs after 10 years from the date of the letting or encumbrance of force account funds. For the purposes of the Needs Study, these shall be called Widening Needs. Widening Needs shall continue until reinstatement for complete Construction Needs shall be initiated by the Municipality.

That Needs for resurfacing, and traffic signals shall be allowed on all Municipal State Aid Streets at all times.

That any bridge construction project shall cause the Needs of the affected bridge to be removed for a period of 35 years from the project letting date or date of force account agreement. At the end of the 35 year period, Needs for complete reconstruction of the bridge will be reinstated in the Needs Study at the initiative of the Municipal Engineer.

That the adjustments above will apply regardless of the source of funding for the road or bridge project. Needs may be granted as an exception to this resolution upon request by the Municipal Engineer and justified to the satisfaction of the State Aid Engineer (e.g., a deficiency due to changing standards, projected traffic, or other verifiable causes).

That in the event that an M.S.A.S. route earning "After the Fact" Needs is removed from the M.S.A.S. system, then, the "After the Fact" Needs shall be removed from the Needs Study, except if transferred to another state system. No adjustment will be required on Needs earned prior to the revocation.

Population Apportionment - October 1994, 1996

That beginning with calendar year 1996, the MSAS population apportionment shall be determined using the latest available federal census or population estimates of the State Demographer and/or the Metropolitan Council. However, no population shall be decreased below that of the latest available federal census, and no city dropped from the MSAS eligible list based on population estimates.

DESIGN

Design Limitation on Non-Existing Streets - Oct. 1965

That non-existing streets shall not have their Needs computed on the basis of urban design unless justified to the satisfaction of the State Aid Engineer.

Less Than Minimum Width - Oct. 1961 (Revised 1986)

That if a Municipal State Aid Street is constructed with State Aid funds to a width less than the design width in the quantity tables for Needs purposes, the total Needs shall be taken off such constructed street other than Additional Surfacing Needs.

Additional surfacing and other future Needs shall be limited to the constructed width as reported in the Needs Study, unless exception is justified to the satisfaction of the State Aid Engineer.

Greater Than Minimum Width (Revised June 1993)

That if a Municipal State Aid Street is constructed to a width wider than required, Resurfacing Needs will be allowed on the constructed width.

Miscellaneous Limitations - Oct. 1961

That miscellaneous items such as fence removal, bituminous surface removal, manhole adjustment, and relocation of street lights are not permitted in the Municipal State Aid Street Needs Study. The item of retaining walls, however, shall be included in the Needs Study.

MILEAGE - Feb. 1959 (Revised Oct. 1994. 1998)

That the maximum mileage for Municipal State Aid Street designation shall be 20 percent of the municipality's basic mileage - which is comprised of the total improved mileage of local streets, county roads and county road turnbacks.

Nov. 1965 – (Revised 1969, October 1993, October 1994, June 1996, October 1998)

However, the maximum mileage for State Aid designation may be exceeded to designate trunk highway turnbacks after July 1, 1965 and county highway turnbacks after May 11, 1994 subject to State Aid Operations Rules.

Nov. 1965 (Revised 1972, Oct. 1993, 1995, 1998)

That the maximum mileage for Municipal State Aid Street designation shall be based on the Annual Certification of Mileage current as of December 31st of the preceding year. Submittal of

a supplementary certification during the year shall not be permitted. Frontage roads not designated Trunk Highway, Trunk Highway Turnback or County State Aid Highways shall be considered in the computation of the basic street mileage. The total mileage of local streets, county roads and county road turnbacks on corporate limits shall be included in the municipality's basic street mileage. Any State Aid Street that is on the boundary of two adjoining urban municipalities shall be considered as one-half mileage for each municipality.

That all mileage on the MSAS system shall accrue Needs in accordance with current rules and resolutions.

Oct. 1961 (Revised May 1980, Oct. 1982, Oct. 1983, June 1993, June 2003)

That all requests for revisions to the Municipal State Aid System must be received by the District State Aid Engineer by March first to be included in that years Needs Study. If a system revision has been requested, a City Council resolution approving the system revisions and the Needs Study reporting data must be received by May first, to be included in the current year's Needs Study. If no system revisions are requested, the District State Aid Engineer must receive the Normal Needs Updates by March 31st to be included in that years' Needs Study.

One Way Street Mileage - June 1983 (Revised Oct. 1984, Oct. 1993, June 1994, Oct. 1997)

That any one-way streets added to the Municipal State Aid Street system must be reviewed by the Needs Study Sub-Committee, and approved by the Screening Board before any one-way street can be treated as one-half mileage in the Needs Study.

That all approved one-way streets be treated as one-half of the mileage and allow one-half complete Needs. When Trunk Highway or County Highway Turnback is used as part of a one-way pair, mileage for certification shall only be included as Trunk Highway or County Turnback mileage and not as approved one-way mileage.

NEEDS COSTS

That the Needs Study Subcommittee shall annually review the Unit Prices used in the Needs Study. The Subcommittee shall make its recommendation the Municipal Screening Board at its annual spring meeting.

Grading Factors (or Multipliers) October 2007

That Needs for tree removal, pavement removal, curb and gutter removal and sidewalk removal shall be removed from urban segments in the Needs study and replaced with an Urban Grading Multiplier approved by the Municipal Screening Board. This Multiplier will be multiplied by the Grading/Excavation Needs of each deficient proposed urban segment in the Needs study.

That Needs for tree removal, pavement removal, special drainage, gravel surface and gravel shoulders shall be removed from the rural segments in the Needs study and be replaced with a Rural Grading Multiplied approved by the Municipal Screening Board. This Multiplier will be multiplied by the Grading/Excavation Needs of each deficient proposed rural segment in the Needs study.

That these Grading Factors shall take effect for the January 2009 allocation.

Roadway Item Unit Price	es (Reviewed Annually)		
Right of Way (Needs Only)			\$98,850 per Acre
Grading (Excavation)			\$4.90 per Cu. Yd.
Base:	Class 5 Gravel	Spec. #2211	\$10.10 per Ton
	Bituminous		\$56.75 per Ton
Surface:	Bituminous		\$56.75 per Ton
Miscellaneous:	Storm Sewer Construction		\$295,400 per Mile
	Storm Sewer Adjustment		\$94,200 per Mile
	Street Lighting		\$100,000 per Mile
	Curb & Gutter Construction		\$11.00 per Lin. Ft.
	Sidewalk Construction		\$27.85 per Sq. Yd.
	Project Development		22%

Traffic Signal Nee segment)	every		
Projected Traffic	Percentage X	Unit Price =	Needs Per Mile
0 - 4,999	25%	\$136,000	\$34,000 per Mile
5,000 - 9,999	50%	\$136,000	\$68,000 per Mile
10,000 and Over	100%	\$136,000	\$136,000 per Mile

Bridge Width & Costs - (Reviewed Annually)

All Bridge Unit Costs shall be \$120.00 per Sq. Ft.

That after conferring with the Bridge Section of Mn/DOT and using the criteria as set forth by this Department as to the standard design for railroad structures, that the following costs based on number of tracks be used for the Needs Study:

Railroad Over Highway	
One Track	\$10,200 per Linear Foot
Each Additional Track	\$8,500 per Linear Foot

RAILROAD CROSSINGS

Railroad Crossing Costs - (Reviewed Annually)

That for the study of Needs on the Municipal State Aid Street System, the following costs shall be used in computing the Needs of the proposed Railroad Protection Devices:

Railroad Grade Crossings	
Signals - (Single track - low speed)	\$250,000 per Unit
Signals and Gates (Multiple Track – high speed) \$275,000 per Unit	
Signs Only (low speed)	\$2,500 per Unit
Concrete Crossing Material Railroad Crossings (Per Track)	\$1,800 per Linear Foot
Pavement Marking	\$2,500 per Unit

Maintenance Needs Costs - June 1992 (Revised 1993)

That for the study of Needs on the Municipal State Aid Street System, the following costs shall be used in determining the Maintenance Apportionment Needs cost for existing segments only.

Maintenance Needs Costs	Cost For Under 1000 Vehicles Per Day	Cost For Over 1000 Vehicles Per Day
Traffic Lanes Segment length times number of Traffic lanes times cost per mile	\$1,950 per Mile	\$3,200 per Mile
Parking Lanes: Segment length times number of parking lanes times cost per mile	\$1,950 per Mile	\$1,950 per Mile
Median Strip: Segment length times cost per mile	\$700 per Mile	\$1,300 per Mile
Storm Sewer: Segment length times cost per mile	\$700 per Mile	\$700 per Mile
Traffic Signals: Number of traffic signals times cost per signal	\$700 per Unit	\$700 per Unit
Minimum allowance per mile is determined by segment length times cost per mile.	\$6,375 per Mile	\$6,375 per Mile

NEEDS ADJUSTMENTS

Bond Adjustment - Oct. 1961 (Revised 1976, 1979, 1995, 2003, Oct. 2005)

That a separate annual adjustment shall be made in total money Needs of a municipality that has sold and issued bonds pursuant to Minnesota Statutes, Section 162.18, for use on State Aid projects.

That this adjustment shall be based upon the remaining amount of principal to be paid minus any amount not applied toward Municipal State Aid, County State Aid or Trunk Highway projects.

<u>Unencumbered Construction Fund Balance Adjustment</u> - Oct. 1961 (Revised October 1991, 1996, October, 1999, 2003)

That for the determination of Apportionment Needs, a city with a positive unencumbered construction fund balance as of December 31st of the current year shall have that amount deducted from its 25-year total Needs. A municipality with a negative unencumbered construction fund balance as of December 31st of the current year shall have that amount added to its 25 year total Needs.

That funding Requests received before December 1st by the District State Aid Engineer for payment shall be considered as being encumbered and the construction balances shall be so adjusted.

Excess Unencumbered Construction Fund Balance Adjustment – Oct. 2002, Jan. 2010

That the December 31 construction fund balance will be compared to the annual construction allotment from January of the same year.

If the December 31 construction fund balance exceeds 3 times the January construction allotment and \$1,500,000, the first year adjustment to the Needs will be 1 times the December 31 construction fund balance. In each consecutive year the December 31 construction fund balance exceeds 3 times the January construction allotment and \$1,500,000, the adjustment to the Needs will be increased to 2, 3, 4, etc. times the December 31 construction fund balance until such time the Construction Needs are adjusted to zero.

If the December 31 construction fund balance drops below 3 times the January construction allotment and subsequently increases to over 3 times, the multipliers shall start over with one. This adjustment will be in addition to the unencumbered construction fund balance adjustment and takes effect for the 2004 apportionment.

Low Balance Incentive - Oct. 2003

That the amount of the Excess Unencumbered Construction Fund Balance Adjustment shall be redistributed to the Construction Needs of all municipalities whose December 31st construction fund balance is less than 1 times their January construction allotment of the same year. This redistribution will be based on a city's prorated share of its Unadjusted Construction Needs to the total Unadjusted Construction Needs of all participating cities times the total Excess Balance Adjustment.

Right of Way - Oct. 1965 (Revised June 1986, 2000)

That Right of Way Needs shall be included in the Total Needs based on the unit price per acre until such time that the right of way is acquired and the actual cost established. At that time a Construction Needs adjustment shall be made by annually adding the local cost (which is the total cost less county or trunk highway participation) for a 15-year period. Only right of way acquisition costs that are eligible for State-Aid reimbursement shall be included in the right-ofway Construction Needs adjustment. This Directive to exclude all Federal or State grants. The State Aid Engineer shall compile right-of-way projects that are funded with State Aid funds. When "After the Fact" Needs are requested for right-of-way projects that have been funded with local funds, but qualify for State Aid reimbursement, documentation (copies of warrants and description of acquisition) must be submitted to the State Aid Engineer.

<u>'After the Fact' Non Existing Bridge Adjustment</u>-Revised October 1997

That the Construction Needs for all 'non existing' bridges and grade separations be removed from the Needs Study until such time that a construction project is awarded. At that time a Construction Needs adjustment shall be made by annually adding the local cost (which is the total cost less county or trunk highway participation) for a period of 15 years. The total cost shall include project development and construction engineering costs based upon the current Project Development percentage used in the Needs Study.

Excess Maintenance Account – June 2006

That any city which requests an annual Maintenance Allocation of more than 35% of their Total Allocation, is granted a variance by the Variance Committee, and subsequently receives the increased Maintenance Allocation shall receive a negative Needs adjustment equal to the amount of money over and above the 35% amount transferred from the city's Construction Account to its Maintenance Account. The Needs adjustment will be calculated for an accumulative period of twenty years, and applied as a single one-year (one time) deduction each year the city receives the maintenance allocation.

'After the Fact' Retaining Wall Adjustment Oct. 2006

That retaining wall Needs shall not be included in the Needs study until such time that the retaining wall has been constructed and the actual cost established. At that time a Needs adjustment shall be made by annually adding the local cost (which is the total cost less county or trunk highway participation) for a 15 year period. Documentation of the construction of the retaining wall, including eligible costs, must be submitted to your District State Aid Engineer by July 1 to be included in that years Needs study. After the Fact needs on retaining walls shall begin effective for all projects awarded after January 1, 2006.

Trunk Highway Turnback - Oct. 1967 (Revised June 1989)

That any trunk highway turnback which reverts directly to the municipality and becomes part of the State Aid Street system shall not have its Construction Needs considered in the Construction Needs apportionment determination as long as the former trunk highway is fully eligible for 100 percent construction payment from the Municipal Turnback Account. During this time of eligibility, financial aid for the additional maintenance obligation, of the municipality imposed by the turnback shall be computed on the basis of the current year's apportionment data and shall be accomplished in the following manner.

That the initial turnback adjustment when for less than 12 full months shall provide partial maintenance cost reimbursement by adding said initial adjustment to the Construction Needs which will produce approximately 1/12 of \$7,200 per mile in apportionment funds for each month or part of a month that the municipality had maintenance responsibility during the initial year.

That to provide an advance payment for the coming year's additional maintenance obligation, a Needs adjustment per mile shall be added to the annual Construction Needs. This Needs adjustment per mile shall produce sufficient apportionment funds so that at least \$7,200 in apportionment shall be earned for each mile of trunk highway turnback on Municipal State Aid Street System.

That Trunk Highway Turnback adjustments shall terminate at the end of the calendar year during which a construction contract has been awarded that fulfills the Municipal Turnback Account Payment provisions; and the Resurfacing Needs for the awarded project shall be included in the Needs Study for the next apportionment.

TRAFFIC - June 1971

Traffic Limitation on Non-Existing Streets - Oct. 1965

That non-existing street shall not have their Needs computed on a traffic count of more than 4,999 vehicles per day unless justified to the satisfaction of the Commissioner.

That for the 1965 and all future Municipal State Aid Street Needs Studies, the Needs Study procedure shall utilize traffic data developed according to the Traffic Estimating section of the State Aid Manual (section 700). This manual shall be prepared and kept current under the direction of the Screening Board regarding methods of counting traffic and computing average daily traffic. The manner and scope of reporting is detailed in the above mentioned manual.

Traffic Counting - Sept. 1973 (Revised June 1987, 1997, 1999)

That future traffic data for State Aid Needs Studies be developed as follows:

1. The municipalities in the metropolitan area cooperate with the State by agreeing to participate in counting traffic every two or four years at the discretion of the city.

2. The cities in the outstate area may have their traffic counted and maps prepared by State forces every four years, or may elect to continue the present procedure of taking their own counts and have state forces prepare the maps.

3. Any city may count traffic with their own forces every two years at their discretion and expense, unless the municipality has made arrangements with the Mn/DOT district to do the count.

N:\MSAS\Books\2011 April Book\Resolutions of the Municipal Screening Board- May 2011.docx
