INFORMATION BRIEF Research Department Minnesota House of Representatives 600 State Office Building St. Paul, MN 55155

Deborah A. Dyson, Legislative Analyst 651-296-8291

Revised: September 2011

Classification of Cities

Cities in Minnesota are classified by population for legislative purposes. This information brief explains the classifications and provides a breakdown of the number of cities and people within each class.

Statutory Basis for Classification of Cities by Population

Cities are classified by population under Minnesota Statutes, section 410.01. Cities are divided, for legislative purposes, into four classes.

First class:	Cities with more than 100,000 inhabitants. Once a city is in the first class, it is not reclassified unless its population decreases by 25 percent from the census figures that last qualified the city as first class.
Second class:	Cities with a population between 20,001 and 100,000
Third class:	Cities with a population between 10,001 and 20,000
Fourth class:	Cities with not more than 10,000 inhabitants

Changes in classification take effect upon the filing of certified copies of the federal decennial census in the office of the secretary of state.

Cities in Each Classification

With the 2010 census, there are four first-class cities (Minneapolis, St. Paul, Rochester, and Duluth), 51 second-class cities, 40 third-class cities, and 759 fourth-class cities, for a total of 854 cities.

Despite having a population of less than 100,000, Duluth remains a first-class city because of the language in the statute, added in 1978, that provides that "once a city is defined to be of the first class, it shall not be reclassified unless its population decreases by 25 percent from the census figures which last qualified the city for inclusion in the class." Duluth was last over 100,000 in the 1970s; the 1970 census for Duluth was 100,578. The 2010 census for Duluth is 86,265.

Bloomington is the most populous second-class city at 82,893, with Brooklyn Park next at 75,781.

Changes from 2000 to 2010

Twenty-two cities changed classification from the 2000 census to the 2010 census. For these cities, there may be laws that no longer apply to them and other laws that now do apply to them.

One second-class city became a first-class city-Rochester.

City	County	2010 Population	2000 Population	
Chaska	Carver	23,770	17,449	
Elk River	Sherburne	22,974	16,447	
Farmington	Dakota	21,086	12,365	
Hastings	Dakota, Washington	22,172	18,204	
Lino Lakes	Anoka	20,216	16,791	
Northfield	Dakota, Rice	20,007	17,147	
Prior Lake	Scott	22,796	15,917	
Ramsey	Anoka	23,668	18,510	
Rosemount	Dakota	21,874	14,619	

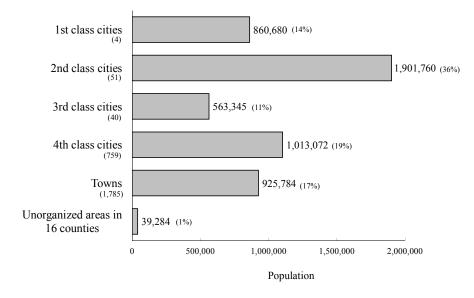

Nine cities changed from third-class cities to second-class cities.

Twelve cities changed from fourth-class cities to third-class cities.

City	County	2010 Population	2000 Population
Alexandria	Douglas	11,070	8,820
Big Lake	Sherburne	10,060	6,063
Forest Lake	Washington	18,375	6,798
Grand Rapids	Itasca	10,869	7,764
Hugo	Washington	13,332	6,363
Monticello	Wright	12,759	7,868
North Branch	Chisago	10,125	8,023
Otsego	Wright	13,571	6,389
Sartell	Benton, Stearns	15,876	9,641
St. Michael	Wright	16,399	9,099
St. Peter	Nicollet	11,196	9,761
Waconia	Carver	10,697	6,814

Since the 2000 census, three cities have been newly incorporated, two cities have merged or consolidated with other cities, and one city dissolved, but the number of cities has remained the same. In addition, since the 2010 census, one more city (Tenney) has dissolved.

The state's total 2010 population of 5,303,925 is distributed among these classifications of cities, and in towns or unorganized areas as follows:

Note: Based on 2010 census data from the state demographer's website, http://www.demography.state.mn.us/index.html.

There are 499 cities with populations of less than 1,000, and 713 cities with populations of less than 5,000. There are 218 townships with a population over 1,000.

The population ranges for classes of cities in the statute have been the same since 1959, when the constitutional provision for city classification by population was repealed and enacted as a statute instead. Prior to that, between 1896 and 1959, first-class cities were those with a population of 50,000 or more.

Classification and Statutory or Home Rule Charter Cities

Within each class, a city may be a statutory city, organized and operating under state statutes, or a home rule charter city, organized and operating as provided in the charter approved by the voters of the city. The following table shows the numbers and populations of statutory cities and home rule charter cities within each class.

rumber und reputation of entres sy rype				
	Statutory Cities		Home Rule Charter Cities	
	Number	2010 population	Number	2010 population
1st class	0	0	4	860,680
2nd class	27	969,676	24	932,084
3rd class	20	259,823	20	303,522
4th class	700	786,227	59	226,845
Total	747	2,015,726	107	2,323,131

Number and Population of Cities by Type

Some powers given to statutory cities may be available to home rule charter cities whatever their classification.

Reasons for Classifications

Classification of cities by population was originally a way to avoid running afoul of the state constitutional prohibition against special legislation by enacting a general law that applied to specific cities.¹ From 1892 to 1958, the state constitution prohibited special legislation, including special legislation for local governments. Laws relating to local governments had to be general laws. However, as the courts explained, a law was not special just because it applied to a specific class of cities. Looking at challenged laws on a case-by-case basis, the courts said that a law that may look special could be general and vice versa. The courts also said that there may be a class of one.²

In order to determine if a classification is justified and constitutional, the court has applied a three-part rational-basis test. A classification is proper if:

- "the classification applies to and embraces all who are similarly situated with respect to conditions or wants justifying appropriate legislation;
- the distinctions are not manifestly arbitrary or fanciful but are genuine and substantial so as to provide a natural and reasonable basis justifying the distinction; and
- there is an evident connection between the distinctive needs peculiar to the class and the remedy or regulations therefore which the law purports to provide." *In re Tveten*, 402 N.W.2d 551, 558-559 (Minn. 1987) (citations omitted).

Even though use of classification schemes helped, soon after adoption of the 1892 prohibition against local law, it was evident that it was too harsh of a restriction for local governments who desired specific authority that could not be met through enactment of general law. The state

¹ Classification did not apply to villages or boroughs, which were made into statutory cities in the 1970s.

² For more information on special legislation, see House Research, *Special Legislation*, July 2008.

constitution was amended again in 1896 to classify cities by population. The classification scheme was also enacted in statute in 1905. As the state supreme court described it, the constitutional classification by population gave the legislature the power to enact legislation relating to cities of a class, alleviating the harshness of the local law prohibition. The legislature was always free to use additional classification however, to further limit the application of a law as long as the additional classification was germane and reasonable. *Leighton v. City of Minneapolis*, 222 Minn. 516, 519 to 521, 25 N.W.2d 263 (1946) (accepting as general law legislation that related to a city of the first class with a population over 450,000, effectively limiting the application of the law to Minneapolis).

In 1958, the Minnesota Constitution was amended to allow special legislation relating to local government (and the constitutional classification of cities by population was repealed, leaving the statutory classification). Under the state constitution, however, "a special law, unless otherwise provided by general law, shall become effective only after its approval by the affected unit expressed through the voters or the governing body and by such majority as the legislature may direct." Minn. Const. art. XII, § 2.

Today, classifications are primarily for legislative convenience. Classification may also be used on occasion to enact a general law that does not need local approval in order to impose a requirement or duty on a local government.

How Classification by Population is Used

There are several ways that classification by population is used. Here are a few examples:

To bring cities under a law as they reach the threshold population.

This would appear to be the most basic application of the classification scheme. Statutes written to apply to cities of a particular class are authorized or required to do something that is related to their ability or needs as they reach a certain population.

To limit the application of a law.

There are many laws (coded and uncoded) that were enacted referring to, for example, a city of the first class *with a population over a certain number*. As discussed above, this is the type of law that could be viewed as general but relates to just one or a very few cities. In this case, the intent is probably not to bring in other cities as they reached the threshold population.

To describe the area in which something must or may be done.

Unlike classifications that relate to a city's powers or duties, this could affect a nongovernmental entity. For example, section 65A.28 requires insurers writing homeowner's policies for property in the metropolitan area or in a city of the first class to compile and file an annual report to the Commissioner of Commerce about the number of policies written, canceled, nonrenewed, and the number of applications declined. (The law goes on to allow the commissioner to make

similar requirements for other parts of the state.) This has no direct bearing on the powers and duties of the city but, rather, affects a private entity in a city of a particular classification.

For descriptive or administrative uses.

Classifications are also used descriptively or administratively to provide information on different types of cities. An example of this is the state auditor's annual reports.

The Law's Applicability

A final caveat: there are some laws written to apply only to cities of one class but then there will be another law allowing the same, or substantially the same, thing for cities of another class. For example, under Minnesota Statutes, section 374.01, in a county with a city of the first class, the county and city can together build and use a courthouse/city hall. Section 374.25 allows any other city and county to do the same thing.
