# ***Metropolitan Council 2014 Unified Operating Budget Report on Professional/Technical Contractual Services***

---

## **Legislative Requirement for Report on Consultant Activity**

Legislation enacted in 2001 requires that the Metropolitan Council provide information about professional and technical contractual services in the annual budget document. Under the statute, the Council must provide specific information by contract or project for the preceding fiscal year(s) and on proposed projects for the next year. The information required includes:

1. Methods the Council used to obtain consultant services;
2. Criteria used by the Council to award the contract;
3. Number of consultants who sought the contract;
4. Total cost of the contract;
5. Duration of the contract; and
6. Source of the funds used to pay for the contract.

## **Procurement Procedures**

The Council's procurement procedures for professional services are based on the value of the services, and can generally be divided into three groups:

- **Services valued at up to \$2,500** - These services are considered micro-purchases and do not require a competitive process. They are initiated as a purchase requisition, and are executed as a purchase order and are generally arranged by project managers without a solicitation process.
- **Services valued between \$2,500 and \$50,000** – Procurements of professional services between \$2,500 and \$50,000 are initiated as a purchase requisition and require an informal competitive process. They can be executed as either a purchase order or a contract. At least three proposals are solicited and evaluated based upon factors such as cost, experience, qualifications, work plan and schedule, and availability. The vendor judged to be most advantageous to the Council is selected. In some cases, a vendor may be selected using a Joint Purchasing Agreement (see discussion below), or through a sole source authorization.
- **Services valued at \$50,000 or greater** – Procurements of professional services above \$50,000 are initiated as a contract request and require a more formal competitive process. They are generally executed as a formal contract and generally follow one of four processes, Informal Request for Proposal (RFP), Formal RFP, Joint Purchasing Agreement (JPA), or Sole Source Authorization.
  - **Informal RFP:** typically used for procurement of professional services between \$50,000 and \$100,000. A written RFP is sent to prospective proposers. The RFP document defines the scope of work and project schedule, lists the information requested from proposers, and lists criteria that will be used by Council staff in the evaluation of the proposals. An evaluation panel of Council staff evaluates the proposals received and selects the vendor judged to be the most advantageous to the Council.
  - **Formal RFP:** typically used for all procurement of professional services over \$100,000. The RFP is advertised in the State Register, and sometimes in other publications that may attract proposals, depending on the scope of work. The RFP is a formal document that addresses the scope of work, the project schedule, various aspects of the procurement process, and instructions to proposers in the preparation of proposals. Proposals are evaluated by a formal evaluation panel based on the evaluation criteria published in the RFP. The evaluation panel recommends the proposal most advantageous to the Council. Awards up to \$250,000 are recommended to the Council's Regional Administrator; awards greater than \$250,000 require Council action.

## ***Metropolitan Council 2014 Unified Operating Budget Report on Professional/Technical Contractual Services***

---

The Council has the authority to enter into Joint Purchasing Agreements (JPA's) with other governmental units as provided for in Minnesota Statute. Joint Purchasing Agreements enable the Council to participate in cooperative buying arrangements where prices for certain goods and services are established based on the estimated total demand by the cooperative members. The Council has Joint Purchasing Agreements with the State of Minnesota, Hennepin County, Ramsey County, and the University of Minnesota. Some professional services are procured through JPA's.

In some cases, Council staff seeks authorization to award professional service contracts on a sole source basis. For contracts valued up to \$250,000, sole source authorization must be approved by the Regional Administrator. For contracts valued at greater than \$250,000, sole source authorization must be approved by Council action. Furthermore, procurements of architectural and engineering projects funded by the Federal Transit Administration must adhere to the Federal Brooks Act. The Brooks Act requires that vendor selection be done without the criteria of price.

### **Contents of Report**

The consulting and contractual services report consists of schedules presented by year for 2012 and 2013. The report for fiscal year 2012 and part of 2013 lists actual contracts.

The report for fiscal year 2013 (adopted budget) and 2014 (proposed budget) reflects budgeted or proposed authority for anticipated consulting or contractual services for each of the Council's major divisions. As actual data becomes available, the budget data will be replaced with actuals.

### **Additional Information Available on Request**

Additional information and detail is available upon request. Requests should be made to Paul Conery, Budget and Evaluation Manager (651-602-1374). Questions regarding Council procurement policies and procedures should be made to Micky Gutzmann, Purchasing Manager (651-602-1741).

## Supplemental Information on Transit Capital Projects

Minnesota Statutes 473.39 provides the Metropolitan Council with bonding authority for transit. Subdivision 4 of this section requires the Council to adopt a three-year transit capital improvement plan before the Council issues debt obligations authorized in Subdivision 1. Specifically, the statute states:

Subd. 4. **Transit capital improvement program.** The council may not issue obligations pursuant to this section until the council adopts a three-year transit capital improvement program. The program must include a capital investment component that sets forth a capital investment strategy and estimates the fiscal and other effects of the strategy. The component must specify, to the extent practicable, the capital improvements to be undertaken. For each improvement specified, the program must describe:

- (1) need, function, objective, and relative priority;
- (2) alternatives, including alternatives not involving capital expenditures;
- (3) ownership and operating entity;
- (4) location and schedule of development;
- (5) environmental, social, and economic effects;
- (6) cost;
- (7) manner of finance and revenue sources, including federal and state funds, private funds, taxes, and user charges; and
- (8) fiscal effects, including an estimate of annual operating costs and sources of revenue to pay the costs.

The Council adopts a six-year capital improvement plan (CIP). The current CIP covers the period from 2014 to 2019. Additional information is provided below for all projects in the CIP to provide supplemental information meeting the statutory requirement.

### **(1) Need, function, objective and relative priority**

The capital improvement plan responds to the various needs of providing transit service in the Twin Cities. The CIP summarizes transit capital projects into six categories:

- **Fleet:** These projects purchase vehicles needed to provide transit service. This includes buses, light rail vehicles, and equipment specifically for vehicles such as security cameras. It also includes mid-life overhauls used to extend the useful life of vehicles.
- **Support Facilities:** These projects are necessary to maintain and house the fleet and provide other ancillary facilities to support operations. This includes garages, office space, fueling stations, and other support facilities. These projects also include major maintenance and repairs to these facilities to extend their useful life.
- **Customer Facilities:** These projects encourage transit use by providing hubs for buses to meet so riders can transfer from one route to another, providing parking spaces for transit users, by sheltering riders from the elements, and by providing other amenities to encourage and facilitate transit use.
- **Technology Improvements:** These projects include communication and computer equipment necessary to the operation of the transit system. It includes radios, dispatching systems, automatic vehicle locators, mobile data terminals, and other similar equipment.

- Other Capital Equipment: These projects include equipment and other items necessary for the operation of the transit system but do not fit in the first four categories. It can include such things as tow trucks, supervisor vehicles, police vehicles, bus lifts, bus washes, fareboxes and other equipment.
- Transitways: These projects include light rail, commuter rail and bus rapid transit projects making significant capital investment within specific transit corridors.

The Capital Improvement Plan includes capital projects with firm funding and other capital projects with anticipated but not secured funding. Funded projects are broken into three tiers. The first tier is projects necessary to maintain the existing transit system. The second tier includes projects to expand the bus system and the third tier includes projects to expand the number of transitways in the region. Projects to maintain the existing transit system are of higher priority than expansion projects. Projects are not ranked further within the various tiers because the bus system is a network and projects are interconnected.

**(2) Alternatives examined to including projects in the CIP**

All alternatives are examined before a project is recommended for scarce transit resources. Alternatives examined include whether a project can be delayed or avoided, whether other funding sources would be more appropriate, whether other locations would better meet transit needs, and other considerations.

Major transitway projects seeking federal New Starts funding go through a formal alternatives analysis proscribed by the Federal Transit Administration.

**(3) Ownership and operating entity;**

Transit equipment and facilities are owned and operated by numerous transit providers in the region. The largest transit provider is the Council’s Metro Transit Division. Other transit providers include the opt out or replacement service providers and various cities, counties, and non-profit organizations. The Council is moving toward a regional fleet concept, with buses and other transit vehicles owned by the Council and operated by various providers. Information on ownership and operating entity for each transit asset included in the capital improvement plan is provided in the supplemental table.

**(4) Location and schedule of development;**

Information on the location and schedule of development is included in the supplemental table. In many instances, the specific location of capital asset can not be determined. Fleet assets when acquired become part of the regional fleet and are assigned to particular providers or particular routes based on the overall transit service plan for the region. Many capital assets are located in a specific location but benefit the entire transit system or sub areas within the region.

### **(5) Environmental, social, and economic effects:**

The Metropolitan Council Transit CIP is integral to the operation of the Twin Cities transit system. The environmental, social, and economic effects of the transit system supported by transit CIP are as follows.

- Takes people to and from work
  - 73% of bus riders and 69% of rail riders are going to or from work
- Removes cars from the streets and highways during peak periods
  - Buses carry the equivalent of up to one and a half lanes of traffic at highly congested points in the highway system
  - Because transit removed cars from the roads, citizens avoided 10 million hours of being stuck in congestion
- Provides mobility options beyond driving
  - 73% of bus riders and 93% of rail riders chose to ride even though they had other transportation options
- Allows people to live without a car
  - 58% of bus riders do not have an automobile available for their use either by choice or because of economic reasons
- Provides mobility for low-income persons
  - 50% of bus riders and 34% of light rail riders earn less than \$24,000
- Provides access to areas with high concentrations of employment
  - 40% of downtown Minneapolis, 20% of downtown St Paul, and 20% of University of Minnesota employees get to work via transit during peak periods
- Provides mobility for persons whose physical abilities may be declining.
  - 19% of rail users are age 55 or older.

### **(6) Cost:**

Total project costs and project costs in the 2014-2019 period are provided in the supplemental table.

**(7) Manner of finance and revenue sources.**

The Transit Capital Improvement Plan assumes funds from the following sources:

- Federal Grants
  - 5307 Formula Funds: Federal gas taxes allocated on a formula basis
  - 5337 State of Good Repair: Allocations on a formula basis
  - 5339 Bus and Bus Facilities: Allocations on a formula basis
  - TEA-21 Title I CMAQ/STP: Allocated competitively through the TAB Process
  - TEA 21 Title III 5309 New Starts: Allocated by Congress for transitways
- Regional Funds
  - Regional Transit Capital bonds: These revenues are from property-tax supported bonds sold by the Metropolitan Council requiring legislative approval.
- State Funds:
  - State bonding bill: Can be either general cash revenues or general revenue bond funds.
  - Trunk highway bonds: Bonds sold and repaid with funds from the Trunk Highway Fund.

Local Funds

Local funds from county regional rail authorities for transitways

Funds from the Counties Transit Improvement Board for transitways

**(8) Fiscal effects, including an estimate of annual operating costs and sources of revenue to pay the costs.**

**Annual Operating Costs**

Tier One Preservation Projects

This includes projects necessary to maintain the existing transit system, including replacement of buses, capital facilities and equipment that have reached the end of their useful life. Because they are replacing existing vehicles or facilities, they do not result in new operating costs. As such, they are already funded through existing operating funds.

Tier Two Expansion Projects

These projects expand the transit system. As such, they may require additional operating and maintenance funds. Buses acquired to provide additional service incur the costs of additional drivers and mechanics to operate and maintain the vehicles. Transit facilities including support and customer facilities, technology and other capital equipment have additional maintenance costs and may have additional operating costs.

Operating costs associated with this expansion will include the salaries and benefits for operators of expansion vehicles; fuel and service for the vehicles; salaries and benefits for mechanics that maintain the vehicles, snowplowing and other maintenance of park and ride facilities, and other typical costs of operating a multi-modal transit system.

#### Tier Three Transitway Projects

These transitway projects expand the transit system and will have additional operating and maintenance costs.

Two large transitway projects are included in the capital improvement plan. The Central Corridor Light Rail transit project (Green Line) will have annual operating costs when rail operations begin in mid year 2014 estimated at \$17.9 million with full year operations in 2015 of \$34.4M. The Southwest Light rail transit project (Green Line Extension) will have partial year 2018 operations of \$9.0M with full year operations in 2019 of \$33.8M.

Other transitway projects with initial planning in the capital improvement plan include: Metro Orange Line I-35W BRT with stations at Lake Street, 66<sup>th</sup> Street, 98<sup>th</sup> Street, and American Blvd.; Snelling Avenue BRT; West 7<sup>th</sup> Street BRT; and Penn Avenue BRT. When funding for these projects becomes available they will be amended and included in the capital improvement plan.

#### **Sources of Revenues to Pay the Costs**

The transit system relies on several funding sources to pay the operating and maintenance costs for capital equipment and facilities acquired through the capital improvement plan. Sources include:

- Fare revenues,
- State general fund appropriations,
- Motor vehicle sales tax receipts distributed to the Metropolitan Transit Fund,
- Operating contributions from county regional rail authorities,
- Other revenues, including advertising and investment income.

With passage of the constitutional amendment dedicating additional receipts from the motor vehicle sales tax to transit in the region, the Council has additional revenues to operate and maintain the existing system. The additional revenues from the motor vehicle sales tax were phased in starting in fiscal year 2008, with full implementation in fiscal year 2012.
