Minnesota's Child Welfare Report 2014

Report to the 2015 Minnesota Legislature

Minnesota's Child Welfare Report 2014

This report was prepared by the Minnesota Department of Human Services, Children and Family Services Administration, Child Safety and Permanency Division, for the Minnesota Legislature in response to a legislative directive in Minn. Stat., section 257.0725. This report is on the Minnesota Department of Human Services website at mn.gov/dhs/.

Total estimated cost: \$10,667.30

Cost of preparation: 245 hours x \$43.54 = \$10,667.30

ADA2 (12-12)

This information is available in accessible formats for individuals with disabilities by calling 651-431-4670 or by using your preferred relay service. For other information on disability rights and protections, contact the agency's ADA coordinator.

Executive Summary

The 2014 "Child Welfare Report" published by the Minnesota Department of Human Services describes the state of children involved in Minnesota's child welfare continuum during 2014 in the areas of child maltreatment assessment and investigation, out-of-home care and adoption.

This report is provided by the Minnesota Department of Human Services, Children and Family Services Administration, in response to a legislative directive, Minn. Stat., section 257.0725. This report also fulfills reporting requirements under the Vulnerable Children and Adults Act, [Minn. Stat., section 256M.80, subd. 2] and the Minnesota Indian Family Preservation Act. [Minn. Stat., section 260.775]

This report has four main sections: Child Maltreatment, Out-of-home Care and Adoption, followed by an appendix with local-level data, and finally a section with state and federal performance measures. Each section begins with "At a Glance" to highlight key information.

In September 2014, an executive order from Governor Dayton created the Governor's Task Force on the Protection of Children. The task force conducted a comprehensive review of how decisions are made to ensure child safety, and recommended specific ways to improve Minnesota's child protection system. Task force recommendations were published in March 2015 in the Governor's Task Force on the Protection of Children, Final Report and Recommendations. It includes short and mid-term steps, as well as laying the ground work for longer-term system redesign. Additionally, recommendations for child welfare data reporting were included; division staff is committed to transparency in child welfare reporting and working to include all recommended data elements in future reports.

Additionally, Northstar Care for Children legislation, passed by the 2013 Minnesota Legislature, was effective Jan. 1, 2015. "Northstar Care for Children is designed to help more children grow up in safe and permanent homes. It consolidates and simplifies administration of three programs: family foster care, Kinship Assistance (which replaced Relative Custody Assistance) and Adoption Assistance. It realigned funds to provide a single program that focuses on the needs of and supports permanency for children." It is likely too early to see the impact of Northstar Care for Children; future reports will examine changes in permanency as a result of the legislation.

Section I — Child Maltreatment covers information about alleged and determined reports of child abuse and neglect to local child welfare agencies. Data include counts of assessments and investigations, and sources of reports; prevalence of maltreatment by age, race and ethnicity; offender relationships; and use of Family Assessment and Family Investigative responses and Structured Decision Making instruments implemented by case workers.

Summary of key findings from Section I:

- There were 72,022 child maltreatment reports recorded. Minnesota county agencies and the Leech Lake and White Earth Bands of Ojibwe accepted 20,167 reports of maltreatment involving 28,716 children in 2014.
- Seventy-seven percent of alleged offenders were the biological parents.

- Neglect (non-medical) was the most common allegation of maltreatment.
- Of all accepted maltreatment reports, 14,601 (72 percent) received a Family Assessment child protective services response.
- Of the 5,214 Family Investigations, maltreatment was determined to have occurred in 2,848 investigations (with 4,087 associated victims).
- There were 19 deaths determined to be a result of maltreatment in 2014; 10 victims had been known to child protection at some point prior to their death.
- American Indian and African-American/Black children had the highest rates of contact with the child protection system. They were 5.5 and three times more likely to be reported as abused or neglected than were White children, respectively.
- Approximately 5.6 percent of all determined victims had at least one subsequent determined report of maltreatment within six months.

Section II — Children in Out-of-home Care provides data on children in placement, including gender, age, race and ethnicity; placement frequency and duration; and re-entry and discharge.

Summary of key findings from Section II:

- In 2014, 12,172 children spent time in out-of-home care. Trends show relatively stable numbers of children in care for the past five years with a small increase of approximately 5 percent from 2013 to 2014.
- American Indian children continued to have the most disparate out-of-home placement rates and were 17.5 times more likely to experience out-of-home care than White children. Children who are African-American or identify as two or more races were 3.6 and 4.5 times more likely to experience care than White children. The Child Safety and Permanency Division, Minnesota Department of Human Services, is engaged in multiple strategies to better understand the reasons for such high disparities and make efforts towards reducing them.
- Forty-five percent of children in placement were age 12 and older.
- Nearly 40 percent of children (37.8) in out-of-home care had at least one disability.
- Eighty-eight percent of children in care spent some time in a family foster care setting.
- About 18 percent of placement episodes ending in 2014 were one week or less, and 29 percent lasted more than one year.
- Seventy-one percent of reasons offered for entry into care were solely related to children's parents.

- A majority of children in care for less than 12 months (87 percent) lived in one or two different placement locations. A majority of children in care for two or more years experienced three or more different placement locations (66 percent).
- About 66 percent of discharges from care involved children returning to the caregivers with whom they resided prior to placement; another 11.5 percent were adopted.
- About 23 percent of children who were reunified with parents or caregivers (with whom they resided prior to placement) had a subsequent placement within 12 months.

Section III — Adoption provides trend information about children under state guardianship, including counts and the demographics of children awaiting adoption and of those adopted; information regarding siblings; adoptions occurring in tribal courts; and the length of time from when children became eligible for adoption to finalized adoption.

Summary of key findings from Section III:

- In 2014, 604 children came under state guardianship (became state wards) as a result of court terminations of parental rights.
- Of all children entering guardianship, the majority (60 percent) were White, followed by children of two or more races (16 percent) and African-American/Black children (14 percent). American Indian children who qualify under the Indian Child Welfare Act (ICWA) are often under the jurisdiction of tribal courts and do not become state wards; therefore, the number of American Indian children who enter state guardianship is much smaller than might be expected. Despite this, American Indian children were still 4.1 times more likely to enter state guardianship than White children. Children of two or more races and African-American/Black children were 3.9 and 2.0 times more likely to enter guardianship than White children.
- The majority of children entering state quardianship were under age 5 (57.6 percent).
- Of the approximately 1,500 children who were state wards during 2014, 686 were adopted.
- There were 56 state wards who aged out of placement at age 18 without legal permanency being achieved.
- Nearly three quarters of children in sibling groups were adopted with the sibling group fully intact (70.7 percent).
- Twenty-two American Indian children who were tribal wards were adopted in 2014; just over 90 percent of these children were under age 6.

Section I: Child Maltreatment

Introduction

The data in this section describe alleged and determined incidents of child maltreatment accepted for a child protection response in Minnesota in calendar year 2014. The data show the number of total reports received, screened out and accepted maltreatment reports and the number of child victims and demographic information; the types and severity of maltreatment; recurrence and re-reporting of maltreatment; as well as other information.

Unless otherwise specified, a child was counted as a "subject of a report" each time s/he was included in a maltreatment assessment or investigation in 2014. However, if the counts were specified as "unique," a child was counted once in the specified category no matter how many times s/he was assessed during the year.

This report mirrors the method in which the U.S. Census Bureau categorizes race and Hispanic ethnicity. Individuals may indicate they are of more than one race. Hispanic ethnicity is specified separately from race.

Anyone can and should report a suspected incident of child maltreatment. Some professionals, such as those working directly with children, are **mandated reporters** and must report to local child protective services if they observe or receive information about an abuse and/or neglect concern. **Non-mandated reporters** voluntarily provide information of known or suspected child maltreatment to local child protection agencies.

Child Maltreatment Report: At a Glance

- There were 72,022 Child Maltreatment reports recorded in 2014. Of these, Minnesota counties and the Leech Lake and White Earth Bands of Ojibwe accepted 20,167 reports of maltreatment for further assessment or investigation involving 28,716 children.
- Seventy-seven percent of alleged offenders were biological parents.
- Neglect (non-medical) was the most common allegation of maltreatment.
- Of all screened in maltreatment reports, 14,601 (72 percent) received a Family Assessment child protective services response.
- Of the 5,214 Family Investigations, maltreatment was determined to have occurred in 2,848 investigations (with 4,087 associated victims).
- There were 19 deaths determined to be a result of maltreatment in 2014; 10 had been known to child protection prior to their death.
- American Indian and African-American/Black children had the highest rates of contact with the child protection system. They were 5.5 and three times more likely to be reported as abused or neglected than were White children, respectively.
- Approximately 5.6 percent of all determined victims had at least one subsequent determined report of maltreatment within six months.

Child Maltreatment Reports

Minnesota county and tribal agencies received 72,022 reports of child maltreatment in 2014. Figure 1 shows the percent of child maltreatment reports that were screened out and accepted for a child protection response, both those where the assessment was completed and those that local agencies were unable to conclude in 2014. Reports that were unable to be concluded were those where the local agency couldn't finish the assessment for reasons such as the family moved out of state. Local agencies screened out 70.5 percent of all child maltreatment reports. A legislative change in July 2014 requires local child protection agencies to maintain detailed records on alleged victims in all reports, including those that are screened out. Future annual reports will present more detailed information about the characteristics of alleged victims in screened out reports. The 2014 "Annual Report" includes information on only those child maltreatment reports that were accepted for a child protection response and where the assessment was completed (N = 20,167).

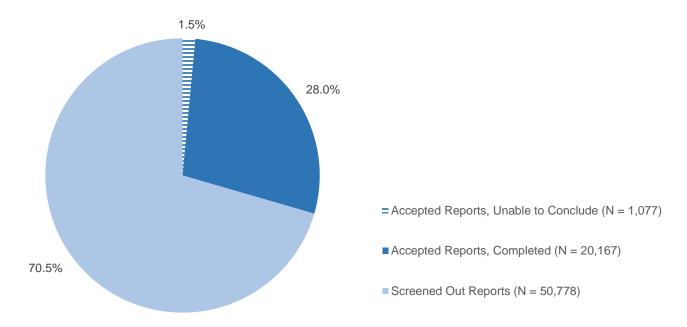

Table 1. Children with at least one maltreatment report

Number of reports in the year	Number of victims	Percent of victims
1	23,554	90.7
2	2,140	8.2
3	237	0.9
4	34	0.1
5	7	0.1
Total unique victims	25,972	100.0

There were 25,972 unique children who were alleged victims in the 20,167 child maltreatment reports in 2014. However, some children had more than one report in the year. Table 1 identifies how many children had one or more reports in 2014. The overwhelming majority of children had only one report (90.7 percent).

Figure 2 shows the 10-year trend of unique children and number of reports. Both the numbers of reports and of children have been increasing since a 10-year low in 2009.

Figure 2. Trend of reports and children in reports

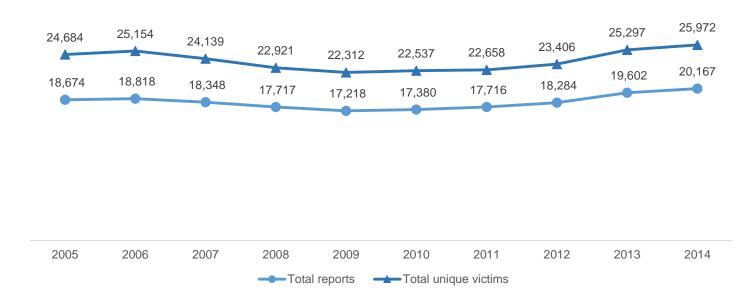

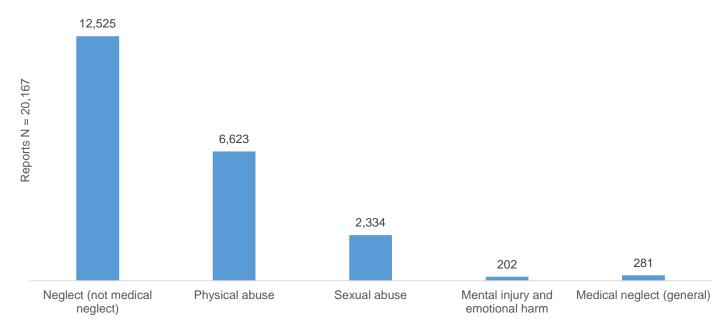

Figure 3 shows that neglect was the most common type of maltreatment alleged in all reports. This category includes emotional neglect, physical neglect, disregard for safety, inadequate supervision, abandonment, expulsion from home, prenatal exposure to alcohol or drugs, educational neglect, endangerment, failure to thrive, and chronic chemical abuse by a primary caretaker.

Figure 3. Child maltreatment reports by maltreatment type

^{*}Please note: A report could have more than one type of maltreatment associated with it; therefore, the total of all types is more than the number of accepted reports.

Figure 4 provides information on the timeliness of child protection responses from the time a report was screened by local agencies to the time children are seen face-to-face by a child protection case worker. There are two response time frames, depending on the severity of alleged maltreatment. The majority of children who are subjects of maltreatment reports require a face-to-face contact within five days (84.5 percent). Just over 15 percent of children had an allegation of substantial child endangerment (e.g., abandonment, malicious punishment, or sexual abuse). Minnesota has room for improvement with only 78 percent of victims in reports being responded to within the time frames established in statute. The 2015 Minnesota Legislature passed a bill in response to recommendations from the Governor's Task Force on the Protection of Children that includes an increase in state funding for child protection staff in county agencies, along with a withhold of a percentage of those state funds based, in part, on performance on this measure.

100.0 90.0 22.6 21.8 80.0 70.0 60.0 Untimely response 50.0 40.0 78.2 77.4 ■ Timely response 30.0 20.0 10.0 0.0 Five-day response 24-hour response

Figure 4. Timeliness of response to victims in child protection reports

Figure 4, a stacked bar graph, shows that the majority (i.e., over 75 percent) of responses occur within the required response time, which depends on the severity of the alleged maltreatment. Note: the total of the two types of responses does not equal the unique count of alleged victims in reports, as some children were in multiple reports with different response types.

Table 2. Sources of accepted maltreatment reports

Report source	Reports	Percent of reports
Law enforcement or courts	5,013	24.9
School personnel	4,876	24.2
Social worker or counselor	2,985	14.8
Health practitioner	2,181	10.8
Parent or relative out of the home	1,312	6.5
Friend, acquaintance or neighbor	677	3.4
Parent or relative in the home	568	2.8
Non-relative caregiver	369	1.8
Other	1,607	8.0
Anonymous	579	2.9
Total reports	20,167	100.0

Table 2 identifies the sources of all maltreatment reports accepted for a child protection response. About 84 percent of reports were from those mandated by law to report suspected child maltreatment. Mandated reporters include those in law enforcement, health care, mental health, social services, education and child care, among others who work with children.

Table 3. Relationship of alleged offenders to child subjects of accepted reports

Relationship	Percent of alleged offenders (N=23,791)
Birth parent	77.2
Adoptive parent	1.1
Stepparent	3.4
Unmarried partner of parent	6.9
Legal guardian	1.4
Sibling	2.1
Other relative (non-foster parent)	3.4
Relative foster parent	0.3
Non-relative foster parent	0.4
Child daycare provider	0.7
Group home or residential facility staff	0.2
Friends or neighbors	0.5
Other	1.5
Unknown or missing	1.0

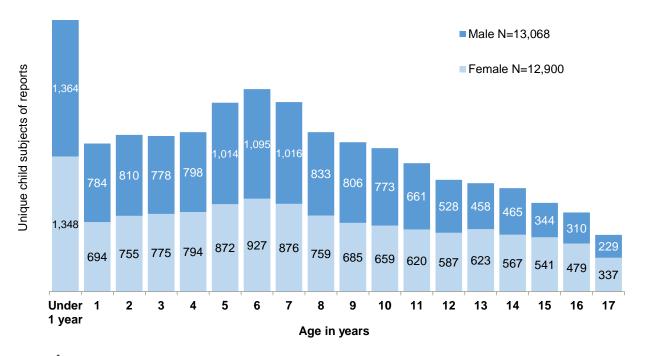

Table 3 presents the relationship of alleged offenders to the children in accepted maltreatment reports.

Birth parents accounted for 77.2 percent of alleged offenders.

Characteristics of Child Subjects of Maltreatment Reports

Figure 5 displays the number of children by age and gender who were alleged victims in accepted maltreatment reports. Children under age 1 are most likely to be alleged victims in maltreatment reports. Because children were sometimes in multiple reports, their age at the time of the first report is used in the figure below.

Figure 5. Child subjects of maltreatment reports by age and gender*

^{*}There were four subjects of maltreatment reports who were age 18.

Table 4 shows the number of alleged victims within each race, as well as all Hispanic children from any race, by maltreatment type. Statewide population estimates are also included for reference and are the population numbers used to calculate the incidence per 1,000 in Figure 6.

Table 4. Maltreatment type by race/ethnicity

Race/Ethnicity	2014 child population est.	Total unique children	Neglect (non- medical)	Physical abuse	Sexual abuse	Mental injury	Medical neglect
African-American/Black	110,137	4,907	3475	1319	498	14	56
American Indian	24,478	1,917	1551	378	154	26	24
Asian/Pacific Islander	76,569	662	392	212	73	6	8
White	1,001,557	14,625	9497	4392	1845	191	164
Two or more races	69,085	3,227	2336	826	392	31	33
Unknown/declined	N/A	634	418	190	59	1	3
Total children	1,281,826	25,972	17,669	7,317	3,021	269	288
Hispanic ethnicity-any race	109,476	2,812	1942	755	325	20	35

Figure 6 illustrates the per-thousand rate of alleged victims, both by race and maltreatment type. Overall in Minnesota, 20.3 children per thousand were alleged victims of child maltreatment in 2014. American Indian and African-American/Black children were approximately 5.4 and 3 times more likely than a White child to be subjects of an allegation of maltreatment in an accepted report, respectively. Children with two or more identified races were also just over three times more likely than a White child to be subjects in an accepted maltreatment report. Mental injury and medical neglect categories were excluded from the graph due to small numbers.

Figure 6. Incidence per 1,000 in the Minnesota child population by race/ethnicity and maltreatment type

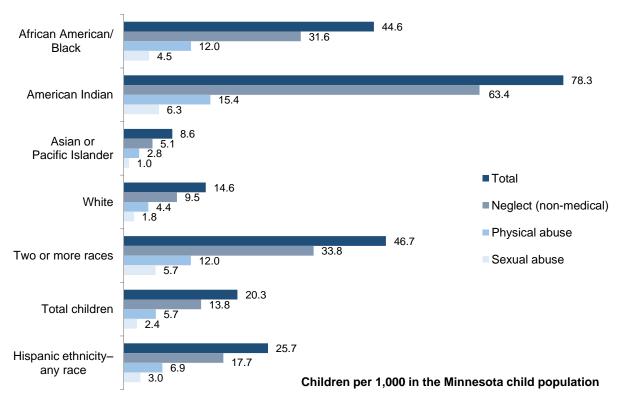

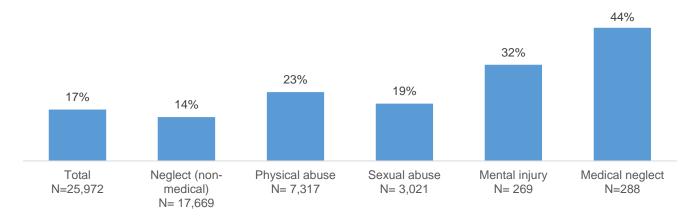

Figure 7 presents the percent of children with known disabilities by maltreatment type. While 17 percent of children reported to child protection had a known disability, only an estimated 3.7 percent of Minnesota's population under age 18 had a disability. [U.S. Census Bureau, 2013 American Community Survey]

Figure 7. Disabilities in alleged victims by maltreatment type

Child Protection Responses: Assessments and Investigations

If an allegation meets statutory criteria, an agency determines if allegations require a **Family Investigation (FI)** or a **Family Assessment (FA)**. By law, reports that include allegations of sexual abuse, egregious harm, homicide, felony assault, abandonment, neglect due to failure to thrive and malicious punishment, must be assigned to a Family Investigation. Maltreatment allegations that occur in family foster homes or family child care homes are assigned to a **Facility Investigation**. Maltreatment occurring in state-licensed residential facilities, institutions and child care centers is investigated by the Minnesota Department of Human Services, Licensing Division, and is not included in this report.

In both a **Family Investigation** and a **Family Assessment**, county/tribal child protection workers interview or talk to persons involved with a report, including the alleged victims, alleged offenders and family members. Workers assess child safety, the risk of future maltreatment, and work to connect families to services when necessary. In all assessments and investigations, family strengths are identified so that they can be used to address the deficits that brought them to the attention of the child welfare system. In a **Family Investigation**, if the evidence suggests that it is more likely than not that a child has been a victim of maltreatment, and harm was caused by an act, or failure to act, by a person responsible for a child's care, the county/tribal child protection worker makes a **determination** that maltreatment has occurred. In a **Family Assessment**, no determination of maltreatment is made.

Table 5 includes the counts of alleged and determined child maltreatment reports and child subjects by child protection response category. Some children were assessed more than once during the year. The "unique child subjects of reports" column counts them only once within the stated category. Seventy-two percent of reports alleging maltreatment were referred to Family Assessment response. Maltreatment was determined to have occurred in 54 percent of Family Investigations and in 30 percent of Facility Investigations.

Table 5. Child maltreatment reports and child subjects by response category

Response category	Rep	oorts	Unique child subjects of reports*		
	Alleged Determined		Alleged	Determined	
Family Assessment	14,601	NA	18,957	NA	
Family Investigation	5,214	2,826	7,323	4,058	
Facility Investigation	352	90	523	162	
Total	20,167	2,916	25,972	4,219	

^{*}The total unique child subjects does not equal the sum of unique children across response types, as some children were in more than one type of assessment.

Figure 8 shows the 2005–2014 trend in the number of maltreatment reports assessed or investigated by county or tribal agencies. The use of Family Assessment response has increasingly replaced Family Investigation since it began statewide in 2004. Until changes were made in legislation in 2015, Family Assessment was the statutorily preferred response to reports of child maltreatment.

Figure 8. Child maltreatment reports by response category, 2005-2014

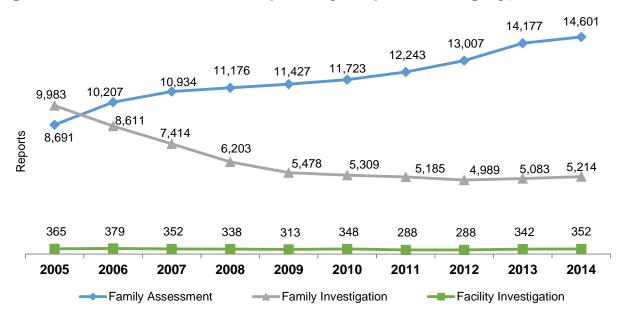

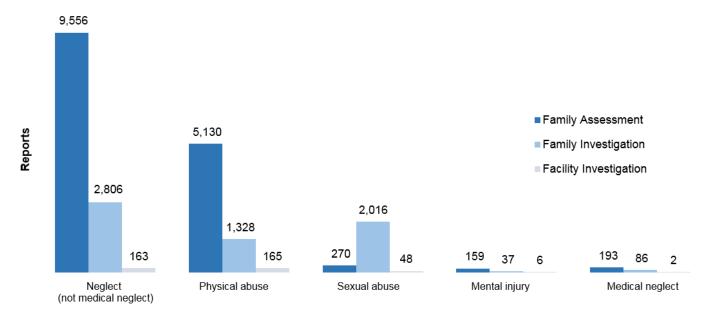

Figure 9, a bar graph, shows the number of reports in each of the three child protection responses by maltreatment type at the time of case closure. Neglect and physical abuse were the most commonly reported maltreatment types that result in a Family Assessment or Family Investigation.

Figure 9. Reports by child protection response and maltreatment type

As state law requires a Family Investigation for all sexual abuse allegations, further examination of the 270 cases that included allegations of sexual abuse assigned for a Family Assessment was deemed necessary.

- In 109 of the 270 cases (40.3 percent), the case had been opened as a Family Investigation as required. Agencies have the authority to track switch from a Family Investigation to a Family Assessment if they obtain information during the investigation that the investigation is not needed and a Family Assessment would be appropriate. This is what occurred in these 109 cases.
- Through communication with local agencies, the following challenge in the Social Services Information System (SSIS) was identified:
 - Screening decisions cannot be made at the individual allegation level. In other words, if a reporter makes a maltreatment report that includes allegations of physical abuse, neglect and sexual abuse and only the allegation of neglect met statutory criteria for a child protection response (which may be appropriately assigned for a Family Assessment), the agency cannot indicate in SSIS that only the allegation of neglect was screened in.

In mid-2015, the Department of Human Services began monitoring reports including allegations of sexual abuse that were assigned for a Family Assessment response. The department reviews these cases, contacts local agencies for discussion, and ensures agencies have a clear understanding of response requirements.

Figure 10 shows the percentage of children that were assigned a Family Investigation or a Family Assessment response within each race category. White children were more likely to be in reports assigned to Family Assessment than children of other races.

Figure 10. Child protection response type by race

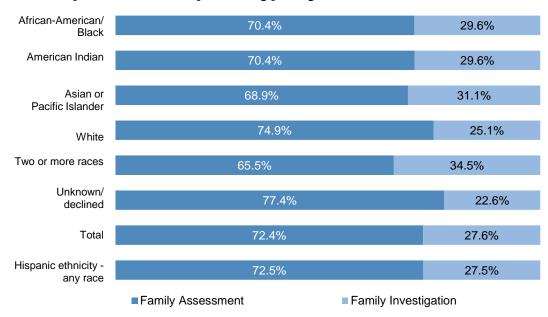

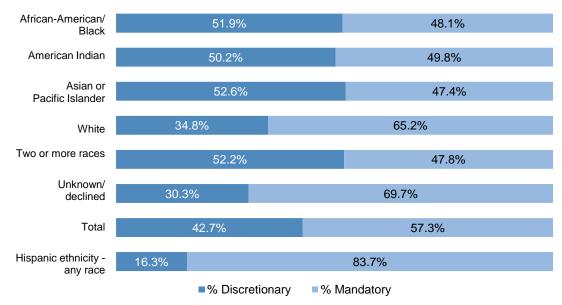

Figure 11 illustrates the percentages of cases that were assigned to a Family Investigation for mandatory or for discretionary reasons within each race category. Reasons that mandate an assignment to Family Investigation include sexual abuse, egregious harm, homicide, felony assault, abandonment, neglect due to failure to thrive, and malicious punishment. Discretionary reasons include a recent or frequent history of child maltreatment reports, child protective services, or legal intervention due to violent activities in the household. Overall, 57 percent of assignments to Family Investigation are for reasons mandated by law.

Children of color are more likely than White children to be assigned to Family Investigation for discretionary reasons.

Figure 11. Assignment to Family Investigation by race

Results of Child Protection Assessments and Investigations

Table 6 shows the percent of investigated reports that resulted in a determination that maltreatment occurred. In Family Investigations, non-medical neglect allegations were the most likely to receive a determination. Facility Investigations were less likely to be determined, with 30 percent demonstrating a preponderance of evidence that maltreatment occurred. No determination of maltreatment is made in a Family Assessment response.

Table 6. Determined family and facility investigations by maltreatment type

	F	amily Investig	ation	Facility Investigation		
Maltreatment type	Alleged	Determined	Percent determined	Alleged	Determined	Percent determined
Neglect (non-medical)	2,806	1,750	62.4	163	56	34.4
Physical abuse	1,328	655	49.3	165	27	16.4
Sexual abuse	2,016	670	33.2	48	13	27.1
Mental injury	37	20	54.1	6	1	16.7
Medical neglect	86	40	46.5	2	0	0.0
Total reports	5,214	2,920	56.0	352	90	25.6

Figure 12 shows the 2005–2014 trend in the number of deaths and life-threatening injuries determined to be the result of maltreatment by a caretaker. Table 7 provides more detailed information about the deaths determined to be the result of maltreatment by a caretaker for 2014.

Figure 12. Deaths and life-threatening injuries, 2005-2014

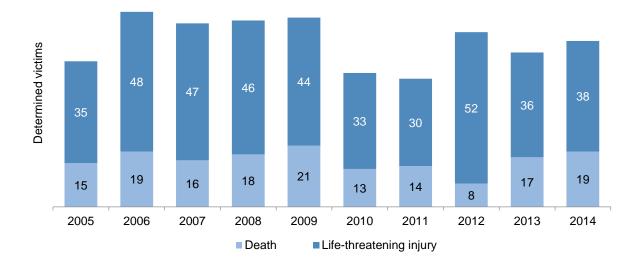

Table 7. Deaths with a determination of maltreatment by year of death and determination

Date of Determination	Date of Death	Age	Race	Gender

During an assessment or investigation, child protection workers are required to complete a Structured Decision Making© Family Risk Assessment instrument to identify families with high, moderate, or low probabilities of future child abuse or neglect. Risk is determined based on quantifying and weighting of family conditions such as past child protection involvement, parental characteristics, domestic violence, and vulnerability of the child. The purpose of the risk assessment is to assist in determining a family's need for ongoing services. Families assigned for a Family Investigation tended to be more high risk. Figure 13 illustrates this difference using a bar graph.

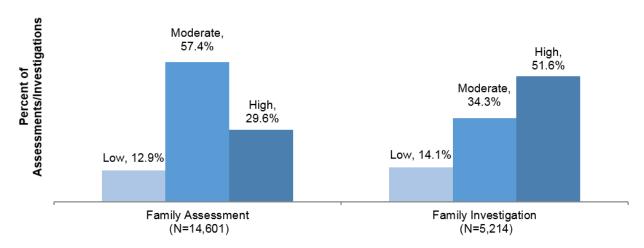

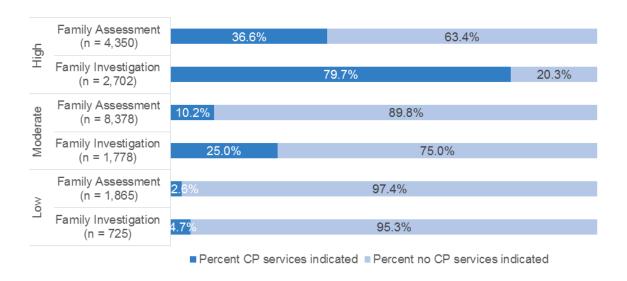

Figure 13. Maltreatment Risk Assessment Level by Response Category

At the conclusion of every child protection response, a determination is made if child protective services are needed (case management services), based on safety needs and risk of future maltreatment. The stacked bar graph in Figure 14 shows the percentage of Family Assessment and Family Investigation cases by risk level where the child protection worker indicated ongoing child protective services were needed. High risk cases were more likely to receive ongoing child protection services compared to moderate and low risk cases.

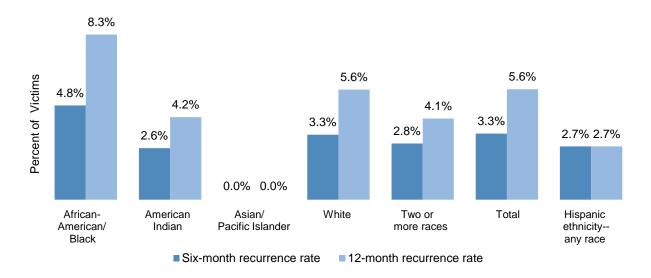

Figure 14. Ongoing Child Protective Services Indicated by Response Category and Risk Level

16

In Figure 15 of all victims in investigations that resulted in a determination that maltreatment occurred between July 1, 2013, and Dec. 31, 2013, (2,114 victims), 3.4 percent had a subsequent determined report of maltreatment within six months, and 5.6 percent within 12 months. African-American children had the highest rates of maltreatment recurrence in the six- and 12-month time frames. Data should be interpreted with caution because of the small numbers in both the numerators and denominators.

Figure 15. Six- and 12-month maltreatment recurrence rate by race/ethnicity

Family Assessment does not result in a determination of maltreatment; therefore, recurrence as a measure does not apply. Table 7 and the corresponding tables in the Appendix refer to the rate of rereporting (additional screened in reports) that can be applied across Family Investigation and Family Assessment for purposes of monitoring the effectiveness of interventions as a result of initial and subsequent reports of maltreatment. A slightly higher percentage of children with an initial response that was a Family Assessment had an additional accepted report within 12 months than did children who received an initial response that was a Family Investigation (17 versus 14.5 percent).

Table 7. Six- and 12-month (accepted) re-reporting rate by response category

Response type	Total unique child subjects 7/1/2013-12/31/2013	Re- reported within six months	Percent re- reported within six months	Re-reported within 12 months	Percent re-reported within 12 months
Family Assessment	9,660	950	9.8	1643	17.0
Family Investigation	3,937	339	8.6	569	14.5
Facility Investigation	309	25	8.1	33	10.7
Total*	12,845	1,209	9.4	2,061	16.0

^{*}Total is less than the sum of each response type as children may have been in more than one response type.

Section II: Children in Out-of-home Care

Introduction

This section focuses on children in out-of-home placement. The terms "out-of-home placement," "out-of-home care," "foster care," and "in care" are used interchangeably in this report. All terms refer to children who experienced one or more days in a placement setting outside of their home during the 2014 calendar year. Not all children in out-of-home care were placed as a result of child protection involvement. Some children were placed in out-of-home care as a result of juvenile delinquency, developmental disabilities or to access needed mental health treatment. Various tables and figures feature data about child demographics, removal episodes out of the original home, number of placement settings within a removal episode, length of time in care, reasons for entry, discharge and re-entries into care. Comparisons are made to the child population by race or ethnicity in Minnesota to understand racial disparities in numbers of children in placement.

An episode of care is defined as an entry into, and an ultimate discharge from, out-of-home care. An episode could have more than one living arrangement, called a placement setting. A child may experience one or more placement locations, or moves, which may occur in different types of settings.

Out-of-home placement report: At a Glance

- In 2014, 12,172 children spent time in out-of-home care. Trends show relatively stable numbers of children in care for the past five years with a small increase of approximately 5 percent from 2013 to 2014.
- American Indian children continued to have the most disparate out-of-home placement rates and
 are 17.5 times more likely to experience out-of-home care than White children. Children who are
 African-American or identify as two or more races were 3.6 and 4.5 times more likely to experience
 care than White children, respectively. The Child Safety and Permanency Division is engaged in
 multiple strategies to better understand the reasons for such high disparities and efforts towards
 reducing them.
- Forty-five percent of children in placement were age 12 and older.
- Nearly 40 percent of children (37.8) in out-of-home care had at least one disability.
- Eighty-eight percent of children in care spent some time in a family foster care setting.
- About 18 percent of placement episodes ending in 2014 were one week or less, and 29 percent lasted more than one year.
- Seventy-one percent of reasons offered for entry into care were solely related to children's parents.
- A majority of children in care for less than 12 months (87 percent) lived in one or two different placement locations. A majority of children in care for two or more years experienced three or more different placement locations (66 percent).
- About 66 percent of discharges from care involved children returning to the caregivers with whom they resided prior to placement; another 11.5 percent were adopted.
- About 23 percent of children who were reunified with parents or caregivers (with whom they
 resided prior to placement) had a subsequent placement within 12 months.

Children in Out-of-home Care

Table 8 shows that in 2014, 12,172 children experienced 12,945 episodes of removal from home for placement in out-of-home care, indicating that some children experienced multiple removals from their home during the year. Nearly 95 percent of children experienced just one out-of-home care episode during the year, while 5 percent experienced two, and less than 1 percent experienced more than two out-of-home care episodes during 2014. The number of children in care on the last day of 2014 (6,858) was about 15 percent higher than the number of children in care on the first day of 2014 (5,838), reflecting a growing trend of more children in out-of-home care.

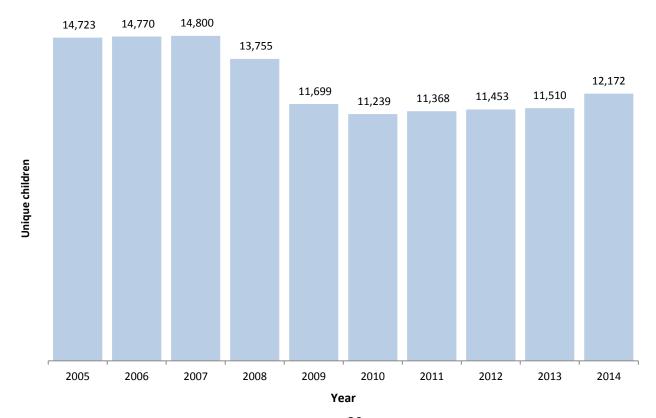

Table 8. Flow of children in out-of-home care

	Children	Episodes
Entered care	6,621	7,106
Continued in care (from prior year)	5,838	5,839
Left care	5,756	6,087
Remained in care	6,858	6,858
Unique counts*	12,172	12,945

^{*}Children may be counted in more than one category.

Figure 16 shows the total unique count of children experiencing placement over the past 10 years. Seventeen percent fewer children experienced out-of-home care in 2014 as compared to 2005. However, placements have slowly increased from a low in 2010, with a 6 percent increase from 2013 to 2014.

Figure 16. Children in out-of-home care, 2005–2014

Characteristics of Children in Out-of-home care

As figure 17 illustrates, boys comprised 53.2 percent of children in out-of-home care in 2014. The largest age group in care was 16–17-year-olds. These primarily represented placements related to child behavior. The largest group of children in care for parental reasons was children under age five, and birth to age three in particular (see Table 12 on p. 26 for more information about primary reasons for entry into out-of-home care).

■ Female (N=5,701) ■ Male (N=6,471) **Unique Children** Under 1 1 year Age in years

Figure 17. Children and youth in out-of-home care by age and gender

Note: Three people in placement were indicated as more than 21 years of age.

Figure 18 shows the trend of different age groups of children touching out-of-home care in the last 10 years. Although children ages 12–17 continue to comprise the largest group in out-of-home care, Minnesota has seen decreasing numbers of older children and increasing numbers of children under age 12. This may be due to policy and practice changes over the years related to reasons for removal specific to older children, including issues around truancy and juvenile corrections.

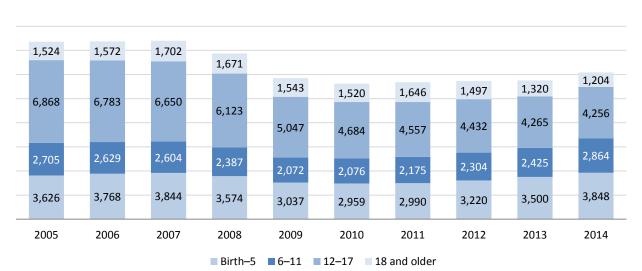

Figure 18. Children in out-of-home care by age group, 2005–2014

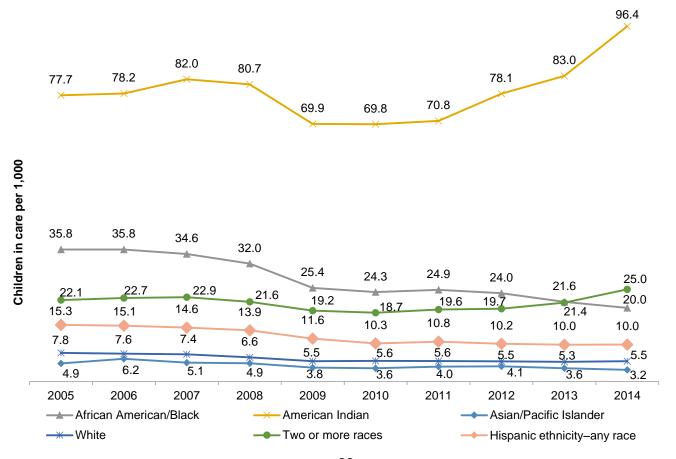

Table 9 provides information on the flow of children in out-of-home care by race/ethnicity, as well as providing the population estimates by race for children in Minnesota. American Indian, African-American/Black, and children of two or more races are over-represented at all points in the out-of-home care flow.

Table. 9 Flow of children in out-of-home care by race/ethnicity

Race/Ethnicity	2014 Child population est.	Total unique children	Entered care	Continued in care	Left care	Remained in care
African-American/Black	110,137	2,200	1,268	999	1,215	1,086
American Indian	24,478	2,360	1,056	1,338	764	1,651
Asian/Pacific Islander	76,569	243	161	89	140	114
White	1,001,557	5,507	3,069	2,575	2,793	2,920
Two or more races	69,085	1,727	966	800	762	1,029
Unable to determine	N/A	135	101	37	82	58
Total children	1,281,826	12,172	6,621	5,838	5,756	6,858
Hispanic ethnicity-any race	109,476	1,097	621	755	325	20

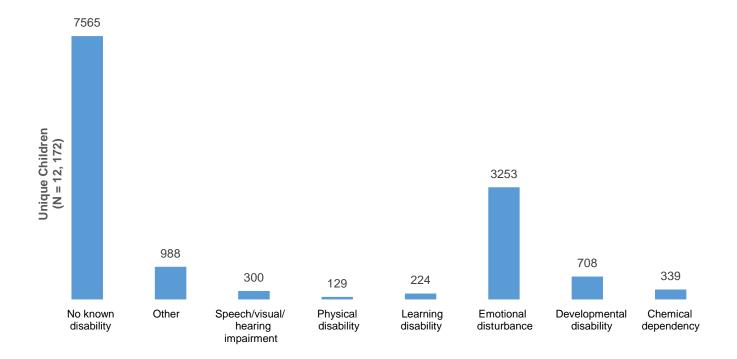

Figure 19 shows the rate of children per 1,000 who experienced out-of-home care between 2005–2014 by race and ethnicity. American Indian children have consistently shown disparate participation in out-of-home care. With the exception of American Indian and children of two or more races, all other racial/ethnic groups decreased in out-of-home care from 2005–2014.

Figure 19. Children in out-of-home care per 1,000 by race/ethnicity, 2005-2014

Nearly 38 percent of children in out-of-home care had at least one known disability as shown in Figure 20 compared to 3.7 percent in the general Minnesota child population and 17 percent among children in accepted child protection reports in 2014. The disability condition most common among children in out-of-home care was emotional disturbance (26.7 percent).

Figure 20. Disability status of children in out-of-home care

Placement Settings and Time in Care

Being placed in the least restrictive setting possible, while maintaining safety of a child, is a requirement of any out-of-home placement made by local agencies; family foster care settings are generally considered the least restrictive option. Table 10 shows the types and placement settings that children experienced in care. A child is counted once each time they experienced a placement setting type. Nearly half of all children in care in 2014 spent some time in a non-relative family foster home. Just over one quarter spent time in a relative foster home (28.2 percent). Seventeen percent of children spent time in a residential treatment center, while 10 percent spent time in a group home.

Table 10. Placement Settings Experienced by Children in Out-of-home Care

Placement setting	Unique children*	Percent
Pre-adoptive home – relative	568	4.7
Pre-adoptive home – non-relative	765	6.3
Foster family home – relative	3,433	28.2
Foster family home – non-relative	5,888	48.4
Pre-kinship home – relative	100	0.8
Group home	1,322	10.9
Foster home – corporate/shift staff	371	3.0
ICF-DD	16	0.1
Residential treatment center	2,055	16.9
Juvenile correctional facility (non-secure, 12 or fewer children)	187	1.5
Juvenile correctional facility (non-secure, 13 or more children)	468	3.8
Correctional facility (locked)	648	5.3
Supervised independent living	366	3.0

^{*} Totals are less than the sum of the categories, as a child may have spent time in more than one setting.

Table 11 depicts the duration of episodes that ended in 2014 that were one day or longer. About 17.5 percent of episodes that ended in 2014 were one week or less, many of which were a result of short-term emergency placements; 28.7 percent lasted more than a year.

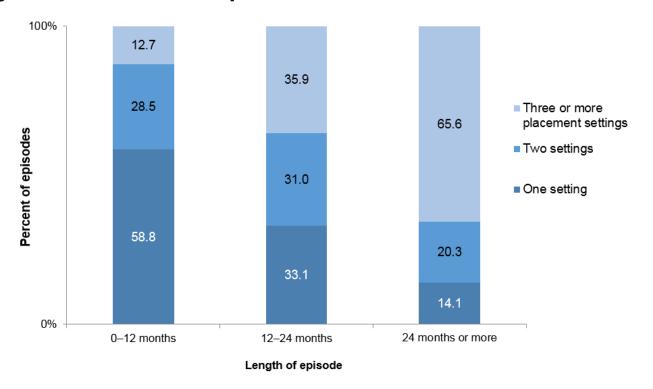

Table 11. Length of episodes ending in 2014

Days in care	Number of episodes	Percent of episodes
1–7	1,047	17.5
8–30	576	9.6
31–90	640	10.7
91–180	715	11.9
181–365	1,292	21.6
366 or more	1,721	28.7
Total*	5,991	100.0

^{*}Does not include episodes that were opened and closed on the same day.

When a child is placed in out-of-home care, a goal of the social service agency is to maintain as much stability in that child's living situation as possible. The stacked bar graph in Figure 21 shows that as children were in care longer, the likelihood that they experienced multiple placement settings increased. For children who were in care for 12 or fewer months, the majority lived in one home or facility (58.8 percent), with 87.3 percent living in one or two homes or facilities. Children in care for two years or more were far more likely to move multiple times. A trial home visit is not considered a placement and is not counted as a move in the episode in Figure 21.

Figure 21. Moves within an episode of out-of-home care

Reasons for Entry, Discharge and Re-entry Rate

Table 12 indicates the number of total episodes experienced by children in Minnesota in 2014, and the primary reason for entry into each out-of-home care episode. Note that children may have entered care multiple times during the year, for multiple primary reasons. Reasons for entry are counted for each entry episode (see Table 8 on p. 20 that shows the flow of both children and episodes in out-of-home care).

Alleged neglect (25.2 percent) was the most common reason for placement, followed by parental drug abuse. In response to tragedies involving abandoned infants in recent years, the 2012 Minnesota Legislature strengthened the Safe Place for Newborns law. In 2014, five newborns entered out-of-home care for the primary reason of Safe Place for Newborns relinquishment.

Table 12. Primary reasons for entry into out-of-home care

	Primary reasons for entry	Episodes (N = 12,945)	Percent
	Abandonment	315	2.4
	Alleged neglect	3,257	25.2
	Alleged physical abuse	1,082	8.4
	Alleged sexual abuse	433	3.3
	Caretaker's inability to cope (illness or other)	359	2.8
	Caretaker's inability to cope – physical health	59	0.5
	Caretaker's inability to cope – mental health	313	2.4
Parental	Death of parent(s)	42	0.3
	Inadequate housing	208	1.6
	Incarceration of parents	333	2.6
	Parental alcohol abuse	332	2.6
	Parental drug abuse	2,333	18.0
	Relinquishment or termination of parental rights	84	0.6
	Safe Place for Newborns	5	0.0
	Total parent reasons	9,155	70.7
	Child alcohol abuse	19	0.1
Child	Child drug abuse	133	1.0
	Child's behavior problem	964	7.4
	Child's behavior problem – delinquency	1,065	8.2
	Child's behavior problem – family conflict	540	4.2
	Child's disability	354	2.7
	Child's mental health issues	547	4.2
	Total child reasons	3,622	28.0
	Primary reason for entry not indicated	168	1.3

The graph in Figure 22 shows the primary reason categories for entering out-of-home care for all entry episodes for years 2010–2014. Between 2010 and 2014, the number of entry episodes has remained fairly stable. The number of placement episodes solely for child reasons decreased by 26 percent since 2010.

The number of new placement episodes for parental reasons has steadily increased since 2010, a 27 percent increase.

7,182 7,106 7,030 6.922 6,707 Entry episodes 4,799 4,523 4,449 4,204 3,784 2,894 2,781 2,696 2,342 2,150 2010 2011 2012 2013 2014 -Child reasons ---- Parent reasons -Total

Figure 22. Primary reasons for out-of-home care entry episodes, 2010–2014

*Note that the total number of child and parent reasons for entry does not add up to the total number of entry episodes because there were a small number of entry episodes where there was no one primary reason of entry given.

Table 13 shows that, in 2014, 65.5 percent of the reasons for discharge when children left an episode of care were for reunification with a parent or primary caregiver with whom they resided prior to placement. Another 9.1 percent had permanent transfer of legal and physical custody to a relative, while 11.5 percent were discharged to adoption. Note that children may have been discharged from care multiple times during the year, for multiple discharge reasons. Reasons for discharge are counted for each episode discharged.

Table 13. Reasons for discharge from out-of-home care

Reasons for discharge	Episodes discharged	Percent
Reunification with parents/primary caretakers	3,985	65.5
Adoption or tribal customary adoption	704	11.6
Permanent transfer of legal and physical custody to a relative	554	9.1
Living with other relatives	203	3.3
Guardianship	21	0.3
Reached age of majority or emancipated	351	5.8
Runaway from placement (placement no longer planned)	93	1.5
Death of child	6	0.3
Transfer to another agency	170	2.8
Total episodes discharged	6,087	100.0

Table 14 presents the out-of-home placement re-entry rate by race and ethnicity. Re-entry means that a child was discharged from out-of-home care to either reunification with parents or primary caretakers or with relatives in 2013 (prior calendar year), and re-entered care within 12 months of that discharge. African-American and American Indian children had the highest rates of re-entry.

Table 14. Re-entry rate for out-of-home care by race/ethnicity

Race/ethnicity	Left care in 2013	Re-entry within 12 months	Percent
African-American/Black	959	260	27.1
American Indian	495	135	27.3
Asian or Pacific Islander	142	27	19.0
White	1,962	425	21.7
Two or more races	562	128	22.8
Unable to determine	51	2	3.9
Total	4,172	977	23.4
Hispanic ethnicity-any race	423	90	21.3

Section III: Adoption

Introduction

A primary goal of the Minnesota Department of Human Services (department) is to ensure that all children in foster care have safe, stable, loving and permanent families. When a child's physical, emotional, and mental health needs are met, they are more successful in their homes, schools and communities.

The public child protection system provides support and services to parents and children to safely reunify children who enter foster care with their families whenever possible. For some children, parents cannot safely care for them and reunification cannot occur. When that happens, one possible outcome is for courts to order **Termination of Parental Rights** (TPR), which severs the legal parent-child relationship and transfers guardianship of a child to the commissioner of the Minnesota Department of Human Services. These children are under state guardianship and are referred to as **state wards** in this section. It is anticipated that the commissioner, or state, will be the temporary guardian of children until they are adopted. As designated agents of the commissioner, county and tribal social service agencies are responsible for safety, placement, and wellbeing of these children, including identifying appropriate adoptive parents and working with adopting parents, court, and others to facilitate the adoption process. It is the department's responsibility to partner with county social service agencies to carry out the tasks required to legally finalize adoptions of children under guardianship of the commissioner.

This report uses county data from the department's Adoption Information System, and includes data from court, county, and tribal social service documents entered at the department. Issues with reliability and consistency of data prior to 2009 due to updating of the data systems does not allow for 10-year trends used in prior reports; instead five-year trends are provided.

Adoption Report: At a Glance

- In 2014, 604 children came under state guardianship (became state wards) as a result of court terminations of parental rights.
- Of all children entering guardianship, the majority (60 percent) were White, followed by children of two or more races (16 percent) and African-American/Black children (14 percent). American Indian children who qualify under the Indian Child Welfare Act (ICWA) are often under the jurisdiction of tribal courts and do not become state wards; therefore, the number of American Indian children who enter state guardianship is much smaller than might be expected. Despite this, American Indian children were still 4.1 times more likely to enter state guardianship than White children. Children of two or more races and African-American/Black children were 3.9 and 2.0 times more likely to enter guardianship than White children.
- The majority of children entering state guardianship were under age five (57.6 percent).
- Of the approximately 1,500 children who were state wards in 2014, 686 were adopted.
- There were 56 state wards who aged out of placement at age 18 without legal permanency being achieved.
- Nearly three quarters of children in sibling groups were adopted with the sibling group fully intact (70.7 percent).
- Twenty-two American Indian children who were tribal wards were adopted in 2014; just over 90 percent were under age 6.

Guardianship and Adoptions

Table 15 provides an overview of the guardianship continuum in which children entered guardianship as state wards, then left when adopted or reached the age of majority. Of the approximately 1,500 children who touched guardianship at some point during the year, just under half were adopted (N = 686).

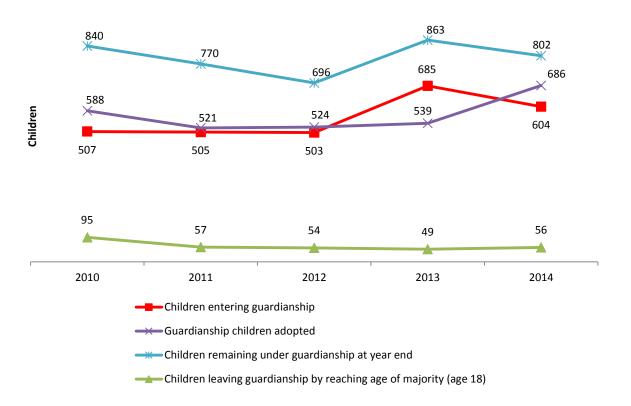

Table 15. Flow of children under state guardianship

	Children
Entered guardianship	604
Continued guardianship	802
Aged out of guardianship	56
Adopted	686
Unique count*	1,509

^{*}Children may be counted in more than one category.

Figure 23 illustrates the five-year trends of the flow of children under state guardianship. As can be seen, there has been a small increase in both the numbers of children entering guardianship and being adopted. After a dramatic decrease from 2010 to 2011, the number of children leaving guardianship by reaching the age of majority has remained mostly stable.

Figure 23. Children under state guardianship, 2010-2014

Characteristics of children entering state guardianship

Figure 24 shows the age and gender of children who entered state guardianship in 2014. The majority of children entering guardianship were under age five (57.6 percent).

■ Male (N = 297) ■ Female (N = 307) Children Under 1 year Age in years

Figure 24. Children entering guardianship by age and gender

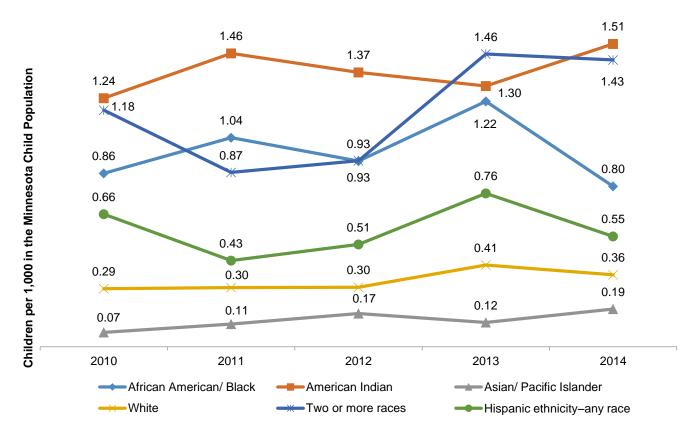

Table 16 illustrates that, in 2014, about 60 percent of children entering guardianship were White, followed by children of two or more races (16 percent), and then African-American/Black children (14 percent). The number of American Indian children entering state guardianship continues to be small; however, data do not include American Indian children under guardianship of a tribe.

Table 16. Children entering guardianship by race/ethnicity

Race/ethnicity	2014 child population est.	Children	Percent	Per 1000 rate
African-American/Black	110,137	85	14.1	0.8
American Indian	24,478	36	6	1.5
Asian/Pacific Islander	76,569	14	2.3	0.2
White	1,001,557	361	59.8	0.4
Two or more races	69,085	97	16.1	1.4
Unable to determine	N/A	11	1.8	N/A
Total children	1,281,826	604	100	0.5
Hispanic ethnicity–any race	109,476	59	9.8	0.5

Figure 25 shows the over/under representation of children of color who entered guardianship in 2014 (note that wards of tribal courts are not included in this table). U.S. Census estimates from 2010–2014 were used for the population comparisons. The number of White children entering guardianship was much higher than those of other races/ethnicities; however, they were under-represented when compared to the overall state population. In 2014, African-American/Black children were 2.0 times more likely to enter guardianship, American Indian children were 4.1 times, and children of two or more races were 3.9 times more likely to enter guardianship.

Figure 25. Children entering guardianship per 1,000 by race/ethnicity, 2009–2014

Adoption of State Wards

Figure 26 displays the number of children who were state wards and were adopted by age and gender in 2014. Younger children were more likely to be state wards who were adopted, and boys and girls were equally likely to be adopted over all, with great variability at any single age.

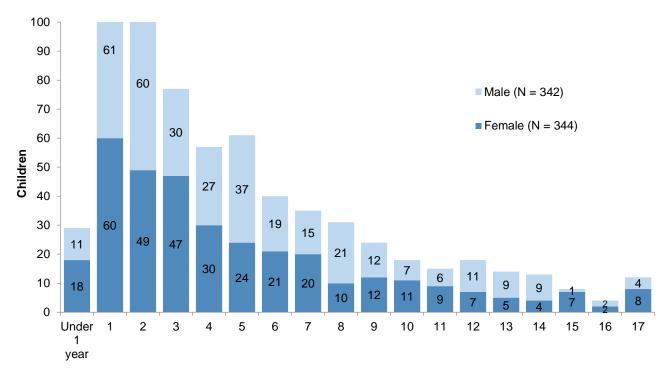

Figure 26. State wards and adopted by age and gender

As seen in the accompanying line graph (Figure 27), younger children under age 6 were the most likely state wards to be adopted, and have been for the last five years. Northstar Care for Children legislation was passed in 2014 and became effective Jan. 1, 2015. One of the goals of Northstar Care for Children is to improve permanency outcomes for children, particularly older children.

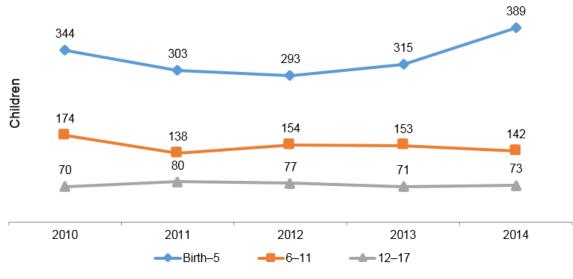

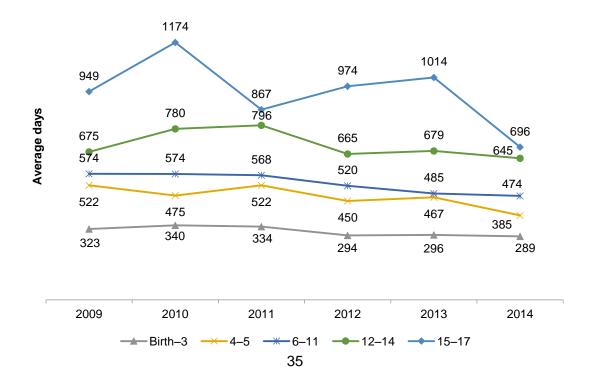

Table 17 shows an increase in adoptions of about 23 percent from 2013 to 2014. The largest group of children adopted in 2014 were White (60.8 percent), followed by African-American/Black children (16 percent), and children of two or more races (13.7 percent).

Table 17. State wards adopted by race/ethnicity, 2010–2014

Year	Total wards adopted		rican- can/Black	Ame Ind			/Pacific ander	WI	hite	m	o or ore ces		nown / lined	ethni	anic city– race
	adopted	N	%	N	%	N	%	N	%	N	%	N	%	N	%

2014	686	110	16.0	54	7.9	6	0.9	417	60.8	94	13.7	5	0.7	82	12.0

Figure 28 shows the average number of days between entering guardianship and adoption from 2010–2014 by children's age group. Older children who were adopted during the five years experienced a greater average number of days under state guardianship than younger children. Although procedurally each step of the adoption process is recorded by the department as a discrete event for data reporting purposes (e.g., entering guardianship, placement in a pre-adoptive home, adoption finalization), these procedural events may not accurately reflect the experience of a child, who often has been living with an adoptive family from early in their removal. Regardless, timeliness to establishing permanency (as measured by these discrete events) is a goal of the department, and is embedded in federal performance measures section of this report.

Figure 28. Time from entering guardianship to adoption by age, 2010-2014

Adoption of Siblings

Minnesota law¹ requires siblings to be placed together for foster care and adoption at the earliest possible time, unless it is determined not to be in the best interests of a sibling, or unless it is not possible after appropriate efforts by the responsible social services agency. The 2008 federal Fostering Connections to Success and Increasing Adoptions Act of 2008 also requires siblings to be placed together whenever possible. Keeping siblings together contributes to maintaining family relationships and cultural connections. Separating siblings in foster care and adoption may add to the trauma experienced by separation from birth parents and other family members.

Table 17 shows the number and percentages of sibling groups that were adopted fully intact, and either partially or fully intact for the years 2009–2014. In 2014, 70.7 percent of sibling groups were preserved in their entirety in adoptions. The total number of sibling groups adopted fully intact increased from 97 groups in 2013 to 130 in 2014. About 82.6 percent of sibling groups were adopted either partially or fully intact in 2014. These percentages have had only minor fluctuations between 2009 and 2014.

The department defines siblings through the biological mother, so siblings placed with, or separated from paternal siblings are not included in the data. In addition, siblings who are 18 years of age or older, who were previously adopted, or who were never under guardianship of the commissioner, are also not counted as part of a sibling group in this data table. Because percentages of sibling groups preserved are calculated for adoptions within a calendar year, some intact adoptions may not be counted if adoptions of the individual children took place over the span of more than one year. Note that the percentages for sibling group preservations are smaller than those reported in previous years due to increased accuracy in determining sibling groups. The current method includes all sibling groups available for adoption during a given year in which one or more siblings were adopted.

Table 18. Sibling group preservation in adoptions, 2010–2014

Year	2010	2011	2012	2013	2014
Sibling groups available for adoption with at least one child adopted	153	133	135	135	184
Sibling groups adopted fully intact	111	90	97	97	130
Sibling groups adopted partially intact	18	14	13	16	22
Percent of sibling groups adopted fully intact	72.5	67.7	71.9	71.9	70.7
Percent of sibling groups adopted partially or fully intact	84.3	78.2	81.5	83.7	82.6

¹ Minn. Stat., section 260C.212, subd. 2 [d].

Tribal Ward Adoptions

Table 18 includes tribal wards adopted from 2009–2014 by age group. Although there are minor fluctuations in numbers by age group across years, the relatively small number of tribal court wards within each group limits interpretation of these trends.

Most tribes in Minnesota offer culturally appropriate permanency through tribal court in place of state ward status for their children. One of the tribal court permanency options is customary adoption, which does not include terminating parental rights. In addition to the 36 American Indian state wards adopted in 2014 reported previously, 22 American Indian wards of tribal court were adopted through tribal customary adoptions during this time period. The majority of these children were members of the White Earth Band of Ojibwe.

Table 19. Tribal wards adopted by age group, 2009–2014

	Age					
Year	Birth t	o age 5	Age 6 a	Age 6 and older		
	N	%	N	%	N	
2010	14	60.9	9	39.1	23	
2011	23	60.5	15	39.5	38	
2012	22	73.3	8	26.7	30	
2013	10	47.6	11	52.4	21	
2014	20	90.9	2	9.1	22	

Section IV: State and Federal Performance Measures

Introduction

The Child Safety and Permanency Division of the Minnesota Department of Human Services is committed to improving the lives of children and families touched by the child protection system, out-of-home care and/or adoption. One strategy for improving the lives of children and families is to monitor the performance of the local agencies providing child protection services, out-of-home care services and adoption services. This report includes the federal performance measures, and other performance measures established at the state level.

The Federal Child and Family Service Reviews examine state performance in child safety and permanency. To inform this process, the Administration for Children and Families created two child safety performance measures and 15 permanency performance measures. The permanency measures can be grouped into the categories of:

- Timeliness and permanency of reunification
- Timeliness of adoptions of children discharged from foster care
- Achieving permanency for children in care for extended periods of time
- Placement stability.

Performance measures established at the state level include:

- Timeliness to alleged victim contact with a social worker in child protection reports
- Physical health exams provided for children entering foster care
- Physical health exams provided for children who have been in care for at least a year
- Mental health screenings for children receiving child protection case management services or who are in out-of-home care

This section includes a statewide summary of these individual measures, followed by performance on these measures by county, Leech Lake and White Earth Bands of Ojibwe for calendar year 2014. Caution should be used in drawing conclusions from measures with small numbers. These data fulfill reporting requirements for the Vulnerable Children and Adults Act [Minn. Stat., section 256M.80, subd.2].

Federal Performance Indicators

Federal Performance Indicators	Minnesota results, 2014	Federal standards
Safety Measure 1.1: Absence of Maltreatment Recurrence Of all who were victims of determined maltreatment during the last six months of 2013, percent who did not have another determined report within six months	94.4% (1,981 of 2,098)	94.6% or higher
Safety Measure 1.2: Absence of Maltreatment in Foster Care Of all children who were served in foster care during the reporting period, the percent who were not the subjects of determined maltreatment by a foster parent or facility staff	99.6% (12,163 of 12,207)	99.68% or higher
Permanency Measure 1.1: Time to Reunification Of children discharged to reunification with primary caretakers, percent reunified in less than 12 months from the time of the latest removal from home	86.2% (2,823 of 3,274)	75.2% or higher
Permanency Measure 1.2: Median Months to Reunification Median length of stay in care from removal from home until the date of discharge to reunification	4.9 months	5.4 months or less
Permanency Measure 1.3: Reunification After First Removal Of children in care for the first time, percent discharged from foster care to reunification in less than 12 months	48.8% (909 of 1,864)	48.4% or higher
Permanency Measure 1.4: Placement Re-entry Of children discharged to reunification, percent re-entered foster care in less than 12 months	23.4% (965 of 4,130)	9.9% or lower
Permanency Measure 2.1: Adoption in Less than 24 Months Of children discharged from foster care to a finalized adoption, percent adopted in less than 24 months	59.9% (430 of 718)	36.6% or higher
Permanency Measure 2.2: Median Months to Adoption Of children discharged from foster care to a finalized adoption, median length of stay in care	21.7 months	27.3 months or less
Permanency Measure 2.3: Discharges to Adoption Of children in care for 17 continuous months or longer on Jan. 1, 2014, percent discharged from care to a finalized adoption by Dec. 31, 2014	20.3% (306 of 1,504)	22.7% or higher

Federal Performance Indicators (continued)

Federal Performance Indicators	Minnesota results, 2014	Federal standards
Permanency Measure 2.4: Legally Free for Adoption Of children in care for 17 continuous months or longer on Jan. 1, 2014, and who were not legally free for adoption prior to that day, percent who became legally free for adoption during the first six months of 2014	4.0% (35 of 869)	10.9% or higher
Permanency Measure 2.5: Time to Adoption Once Legally Free Of all children who became legally free for adoption during 2013, percent discharged from care to a finalized adoption in less than 12 months from the date of becoming legally free	42.9% (338 of 788)	53.7% or higher
Permanency Measure 3.1: Permanency for Children in Care 24 or More Months Of children in care for 24 months or longer on Jan. 1, 2014, percent discharged to a permanent home by Dec. 31, 2014, and prior to their 18 th birthday	17.4% (195 of 1,119)	29.1% or higher
Permanency Measure 3.2: Permanency for Children Legally Free for Adoption Of children discharged from care during 2014, and who were legally free for adoption (i.e., a parental rights termination for both parents) at the time of discharge, percent discharged to a permanent home prior to their 18 th birthday	92.9% (708 of 762)	98.0% or higher
Permanency Measure 3.3: Aging Out of Long-term Care Of children who aged out of care or reached their 18 th birthday while in care, but had not yet been discharged, percent in foster care for three years or longer	37.2% (171 of 460)	37.5% or lower
Permanency Measure 4.1: Placement Stability for Children in Care Less than 12 Months Of children in care during 2014 for at least eight days, but less than 12 months, percent with two or fewer placement settings	87.3% (5,701 of 6,531)	86.0% or higher
Permanency Measure 4.2: Placement Stability for Children in Care More than 12 and Less than 24 Months Of children in out-of-home care during 2014 for at least 12 months, but less than 24 months, percent with two or fewer placement settings	64.1% (1,634 of 2,550)	65.4% or higher
Permanency Measure 4.3: Placement Stability for Children in Care 24 Months or Longer Of children in out-of-home care during 2014 for at least 24 months, percent with two or fewer placement settings	34.4% (655 of 1,905)	41.8% or higher

Safety Indicator 1.1: Absence of Repeat Maltreatment

Of all who were victims of determined maltreatment during the last six months of 2013, what number did not have another determined report within six months? The national standard is 94.6 or higher.

County/Tribe	Unique determined victims July 1, 2013–Dec. 31, 2013	Victims–no recurrence within six months	Percent not recurring within six months

Permanency Indicator 4.3: Placement Stability for Children in Care 24 Months or Longer

Of all children who were served in foster care during calendar year 2014, and who were in foster care for at least 24 months, what percent had two or fewer placement settings? The national standard is 41.8 percent or higher.

State Performance Measures

State Performance Measure: Timeliness to Initial Contact with Child Subjects of Maltreatment Reports

Percentage of face-to-face contacts with children who were subjects of maltreatment reports within required time frames. The total of the two types of responses does not equal the unique count of alleged victims in reports, as some children were in multiple reports with different response types.

0 . 5 .	Family A	ssessment	no substa	Family Investigation– no substantial child endangerment alleged		Family Investigation– substantial child endangerment alleged

Total	1,281,826	25,972	20.3	18,957	14.8	7,815	6.1	4,219	3.3	

^{*}These numbers represent the 2010 U.S. Census for children residing on the Leech Lake and White Earth reservations who indicated American Indian alone or as one of two or more races. There are no intercensal child population estimates for these groups. The Leech Lake reservation overlaps Cass, Itasca, Beltrami and Hubbard counties. The White Earth reservation overlaps Mahnomen, Becker, and Clearwater counties.

Assessments and Investigations by Maltreatment Type and Response Category

Note: A report may allege more than one type of maltreatment; therefore, totals do not equal the sum of the reports in maltreatment types. "Det." is an abbreviation for determined. Investigation combines Family Investigations and Facility Investigations. Data on pathway assignment is based on the time of case closure, which may be different than how the case was initially opened.

^{*} Of the 270 Family Assessment sexual abuse allegations, 40.3 percent were opened as Family Investigations and switched when new information was obtained. In other cases, it appears that challenges in the data entry system (the Social Services Information System) may be the reason for these sexual abuse allegations closing as a Family Assessment. See page 12 for more information.

Child Protection Services Needed or Supportive Services Offered

The table below includes the number and percent of Family Assessments (FA) where child protection services were needed or optional supportive services offered, and the number and percent of Family Investigations (FI) where child protective services were needed. Facility Investigations are not included in this analysis due to small numbers and rare referrals for services.

County/tribe	Total FA reports	FA with CPS needed	Percent FA with CPS needed	FA with supportive services offered	Percent FA with supportive services offered	Total alleged FI reports	Alleged FI with CPS needed	Percent FI with CPS needed

^{*}There are no intercensal population estimates for Indian reservations. These numbers represent the 2010 U.S. Census for children residing on the Leech Lake and White Earth reservations and who indicated American Indian alone or as one of two or more races. The Leech Lake reservation has land in Cass, Itasca, Beltrami and Hubbard counties. The White Earth reservation overlaps Mahnomen, Becker and Clearwater counties.
