Diversionary Work Program Fifth and 12th Month Outcomes

Implemented in July 2004, the Diversionary Work Program (DWP) was designed to provide intensive employment services to family cash assistance applicants with the intention of helping them move into jobs rather than directly onto the Minnesota Family Investment Program (MFIP). DWP cash assistance and employment services cease after four months, at which time, participants may be assessed for MFIP eligibility.

This quarterly report identifies the count of cases in the first month of DWP eligibility in a spell and determines the percent of cases in the cohort for a given month that did not receive MFIP cash assistance in the fifth or 12th month after initial DWP eligibility. Also shown is the percent of cases that did not receive MFIP cash assistance in any month from the fifth through the 12th month after initial DWP eligibility. The report covers 25 cohorts. It is published every six months and covers either December to the December two years later or June to the June two years later.

Figure 1 tracks the statewide percent of cases off MFIP cash in the fifth month, in the 12th month, and in the fifth through the 12th month after the first month of DWP using a 12-month moving average.²

Table 1 shows the cohort count and percent of DWP cases that did not receive MFIP cash in the fifth month, in the 12th month, and in the fifth through the 12th month after their first month of DWP eligibility in a spell, for the past 25 months. Between 60 and 70 percent of all DWP applicants were not receiving MFIP cash benefits in the month immediately following their last month of DWP eligibility in a spell. More than 70 percent were not on MFIP cash in the 12th month after DWP began. Slightly more than half of cases did not receive MFIP cash assistance at any time between the fifth and 12th month after initial DWP eligibility.

The tables on subsequent pages provide monthly data on the fifth and 12th month measures by county for the cohorts starting DWP from June 2012 to June 2014.

A cash assistance applicant that was not receiving MFIP in the fifth or 12th month after the first month of DWP eligibility was not necessarily diverted into employment by the DWP program. A quasi-comparison group study³ compared pre-DWP MFIP recipients likely to have met DWP eligibility guidelines with an early DWP cohort. While the fifth-month exit rate jumped from approximately 40 percent to 60 percent after the implementation of DWP, the effect was not lasting. By the 12th month, DWP applicants were on MFIP cash in approximately the same proportions as before the implementation of DWP.

¹ This report was revised in July 2013. The original version tracked cases in their first month *ever* on DWP and contained data for the entire history of the program. The revised report includes all cases in their first month of DWP eligibility in a spell, even if they participated in the program in the past. This added about 28 percent more cases to the cohort in an average month (i.e., an average of 28 percent of DWP applicants each month are repeaters). Also, the report includes only 25 months of data rather than the full history to make it more useful and readable

² The 12-month moving average is used to give a clearer view of the consistency of the data rather than to highlight the seasonality of the monthly numbers. The 12-month moving average calculation includes the reported month and the previous 11 months.

³ Minnesota Department of Human Services. Evaluation Note 16: The Diversionary Work Program: Caseload and Cost Impact, January 2007.

Table 1. Percent of DWP cases not on MFIP cash in the 5th month or 12th month after first month of DWP eligibility
