APPENDIXES 1 & 2

Volume 2 of the Alamanac includes two appendixes. The first appendix contains several tables of summary statistics, such as frequency distributions of use type and resource type. For example, irrigation accounts for 57 percent of reported water use and almost 64 percent of the reported amount of water withdrawn comes from ground water sources. Tabulations of annual volume by county and use type are also included. The reported amount of water withdrawn, the average amount of water withdrawn and the number of appropriators reporting are calculated for each of the ten use categories within each county. For example, in Ramsey County 21 appropriators used 1611.059 million gallons of water for air conditioning at an average of 76.717 million gallons per appropriator.

The second appendix is composed of three cross-reference tables. A permit number may be referenced by county, public land survey location, or resource name. For example, permit number 710938 is referenced with the permits in Sherburne County, is located in township 33 range 29 section 12, and also appears with the permits whose resource is the Mississippi River. Permits that have missing values for the county, public land survey location, or resource will appear at the beginning of each cross-reference table.

APPENDIX 2 (A,B,C)

Appendix 2 contains three cross indexed tables to aid in permit searches. The same information is contained in each of the tables, only the order that the information is presented is different. Each table contains the permit application number, the county number and name, the PLS description, and the source type and name.

Appendix 2a -

This table is ordered by county. If the county number is not available the permits are listed first.

Appendix 2b -

This table is ordered by PLS location. Those without a PLS location coded are listed first.

Appendix 2c -

This table is ordered by source name. Unknown sources are first.
