

# Study and Interpretation of the Chemical Characteristics of Natural Water

U.S. Geological Survey, Water Supply Paper 2254

By John D. Hem

---

The text and graphics are presented here in pdf format (print quality):

The full report is [28 MB](#)

The report is also available in sections below in pdf, for a faster download.

If you have Adobe Acrobat Reader installed on your computer, you may view and/or print the PDF version of this report. [If you do not have Acrobat Reader, you may download it here.](#)

---

## Section available in pdf:

### [Section1--1.5 MB](#)

- Preface
- Abstract
- Introduction
- Properties and structure of water
- Composition of the Earth's crust
- The hydrosphere
- The atmosphere

### [Section 2--3.7 MB](#)

- Principles and processes controlling composition of natural water

### [Section 3--1.7 MB](#)

- Evaluation of water composition

[Section 4--\(1st half\)5.1 MB -- \(2nd half\) 6.7 MB](#)

Significance of properties and constituents reported in water analyses

[Section 5--2.8 MB](#)

Organization and study of water-analysis data

[Section 6--1.6 MB](#)

Relation of water quality to lithology

[Section 7--650 KB](#)

Influence of activities of humans

[Section 8--1.1 MB](#)

Application of water-quality measurements to quantitative hydrology

[Section 9--1.1 MB](#)

Relation of quality of water to use

[Section 10--834 KB](#)

Water-management concepts and problems

[Section 11--3 MB](#)

Selected references
