

2015 Health Care Quality Report

Compare Clinic, Medical Group
and Hospital Performance

Measuring
and Tracking
Health Care
Quality
in MN

December 2015

MN Community Measurement (MNCM) is excited to release the 2015 *Health Care Quality Report*. A dozen years after the first edition, this annual report continues to expand and evolve each year. The first report featured results for just 61 medical groups on seven HEDIS quality measures. This year, we're highlighting data on 911 clinics, 263 medical groups and 132 hospitals on more than 75 measures of clinical quality, cost and patient experience.

The growth in this report is a reflection of the increasing value that MNCM provides to all of the stakeholders in Minnesota's health care community: providers, patients, health plans, employers, policy leaders and the public at large.

The *Health Care Quality Report* shines a light on our health care system; over the past year, we have added two companion reports that continue that illumination: the *Health Equity of Care Report* and the *Total Cost of Care Report*. Together, these provide a holistic view of health care in Minnesota, including the areas where we are excelling and the areas that we must push ourselves to provide better care.

MNCM strives to provide measures that truly improve the value of care in our community. We also seek to create new measures that address complex conditions and topics which are meaningful for both patients and providers. To that end, we publicly-reported new pediatric preventive care, patient-reported outcome, and specialty care quality measures this year. We released the second cycle of statewide Patient Experience of Care Survey results, and the second year of Total Cost of Care results.

After several years in of effort and community input, we applied actual-to-expected risk adjustment to quality measures for the first time. The goal of risk adjustment is to isolate the clinic or medical group's true impact on patients' health, and allow them to be more easily compared. This report includes nine risk adjusted measures, and we are continuing to evaluate the expansion of risk adjustment to additional measures or using different factors.

As new reporting requirements and value-based payment mechanisms roll out, MNCM's trusted record of multi-stakeholder, consensus-based decision making to address complicated health care challenges in will be more important

than ever. The demand for value accountability will continue to increase the need for meaningful measures that improve the lives of those served.

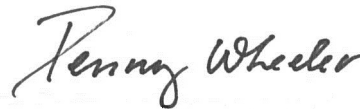

We are focused on measures with the greatest potential for impact, thus enhancing the benefits and reducing the burdens of reporting for medical groups. We are also focused on maintaining the gains that our state has made in health care transparency and improvement, while continuing to identify areas of measurement and data collection that will push our community to achieve new milestones in health.

MNCM is proud to be part of our thriving, innovative and collaborative health care community. And we're thankful to our community for continually coming together to work toward our shared goal of improving health and health care in Minnesota.

We look forward to the continued partnership and the road ahead.

Jim Chase
President, MN Community Measurement

Penny Wheeler, MD
Board Chair, MN Community Measurement

Introduction

The MN Community Measurement *2015 Health Care Quality Report* compares clinic, medical group and hospital performance on quality, patient experience, cost, and health information technology measures. Quality measures range from preventive to chronic care, along with hospital care for acute and surgical needs. This year marks MNMCM's 12th annual report. The report provides valid, reliable and comparable information for clinics, medical groups and hospitals to use in their efforts to improve patient care and outcomes.

MNCM began publicly reporting health care performance results in 2004 with a vision of improving health and health care in Minnesota and neighboring communities through public reporting. We believe that making this information transparent drives improvement in the cost, quality and patient experience of care. The information is most actionable at clinic and medical group levels since that's where accountability for care lies, so we strive to publicly report results at that level as often as possible.

Our inaugural reporting effort in 2004 utilized Healthcare Effectiveness Data Information Set (HEDIS) measures, aggregating data from 10 health plans and reporting results at a medical group level. One year later, MNMCM became an independent, collaborative, non-profit organization. Since inception, our Board of Directors has included physicians; health plans, hospital and state government representatives; employers; and consumers. We again reported HEDIS measures at a medical group level that year, and expanded our effort into reporting the results online for the first time.

As we gained momentum and experience, medical group leaders encouraged us to obtain data from the most comprehensive source: their own electronic health record systems. In 2007, we piloted a process to collect data directly from clinics, which became known as Direct Data Submission (DDS). This process made reporting results for individual clinic sites possible. During the first year, 191 clinics were reported for the Optimal Diabetes Care measure; today, we report results for more than 590 clinics for that measure.

The *Health Care Quality Report* has also expanded dramatically during this period. It now includes 32 clinical quality measures; 11 HEDIS measures; patient experience measures; cost measures; and hospital measures. This year, we added new patient-reported outcome measures for Total Knee Replacement, Lumbar Fusion and Lumbar Discectomy/Laminotomy; as well as clinical quality measures for Adolescent Mental Health/Depression Screening and Pediatric Obesity Counseling. During 2015, we also released results of the second cycle of statewide Patient Experience of Care, which is reported every other year.

Additionally, we made significant progress in the evaluation and implementation of risk adjustment in our measurement processes. Our Risk Adjustment Committee established a framework through which it will evaluate measures to determine if they're appropriate for risk adjustment, and the majority of MNMCM's clinical quality measures have undergone that evaluation. The 2015 report includes the risk adjusted results of nine quality measures, all of which have been already or will be in the coming year posted on our consumer website, MNHealthScores.org.

We appreciate the significant contributions of clinics, medical groups, health plans, hospitals and professional organizations that contribute data to this report, as well as the community stakeholders who share their expertise with us as Board, committee and workgroup members; pilot participants; members; and a variety of other ways. Achieving our mission to accelerate the improvement of health by publicly reporting health care information relies on this collaborative, multi-stakeholder effort. We strive to continue to be the trusted source for performance measurement, data sharing and public reporting locally and nationally.

Executive Summary

This is MNMCM's 12th annual *Health Care Quality Report*. Included in this report are clinic performance results on 32 clinical quality measures, two Total Cost of Care measure, results on the Health Information Technology (HIT) Survey, Patient Experience of Care survey results for 2015, and hospital measures.

Key Findings

Clinical Measures

Two clinical measures showed noteworthy improvement in their statewide rates:

- **Immunization for Adolescents** - The statewide rate increased from 62 percent in 2014 to 75 percent in 2015, translating into 570 more adolescents being immunized.
- **Avoidance of Antibiotics in the Treatment of Adult Bronchitis** - The statewide rate increased from 29 percent in 2014 to 34 percent in 2015, translating into 847 more adults receiving appropriate treatment (antibiotics were not prescribed) for their diagnosis of acute bronchitis.

Two clinical measures showed noticeable improvement in their statewide rates:

- **PHQ-9 Follow-Up at Six Months** - The statewide rate increased from 31 percent in 2014 to 34 percent in 2015, translating into at least 3,200 more patients with a diagnosis of major depression or dysthymia and a PHQ-9 score greater than nine having a follow-up PHQ-9 test at six months from the index date.
- **PHQ-9 Follow-Up at 12 Months** - The statewide rate increased from 23 percent in 2014 to 26 percent in 2015, translating into at least 2,300 more patients with a diagnosis of major depression or dysthymia and a PHQ-9 score greater than nine having a follow-up PHQ-9 test at six months from the index date.

Eight other clinical measures showed small improvements in their statewide rates:

- Colorectal Cancer Screening
- Chlamydia Screening in Women
- Appropriate Testing for Children with Pharyngitis
- Appropriate Treatment for Children with URI
- Depression Remission at Six Months
- Depression Response at Six Months
- Depression Remission at 12 Months
- Depression Response at 12 Months

Two new clinical measures were collected and submitted using MNMCM's Direct Data Submission (DDS) process.

Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening had a statewide rate of 40 percent. **Pediatric Preventive Care: Overweight Counseling** had a statewide rate of 85 percent.

Three orthopedic measure sets are new this year which includes **Spinal Surgery: Lumbar Discectomy/Laminotomy, Spinal Surgery: Lumbar Spinal Fusion,** and **Total Knee Replacement**. One process measure and one functional status measure is reported for each measure this year. In 2014, three process measures were reported for the Total Knee Replacement measure.

Six measures underwent a measure specification change in 2015 and therefore, do not have trending data:

- Cervical Cancer Screening
- Optimal Diabetes Care
- Optimal Vascular Care
- Optimal Asthma Control - Children
- Optimal Asthma Control - Adults
- Controlling High Blood Pressure

Executive Summary

Patient Experience of Care - Clinic

In 2015, there were 847 clinics in MN and neighboring states that had the surveys fielded on their behalf by a CAHPS-certified survey vendor. The response rate was 33 percent. An analysis of the data produced four composite scores called “domains” for each clinic. These clinic domain scores are reported as top box scores – meaning the percent of responses that rated the clinic with the “most positive” response.

Across all respondents, the overall top box domain averages for 2015 were:

- **Access to Care:** 60 percent
- **Provider Communication:** 83 percent
- **Courteous & Helpful Office Staff:** 81 percent
- **Provider Rating:** 79 percent

Patient Experience of Care - Hospital

The most current H-CAHPS® data that is publicly reported was collected from admission dates January – December 2013 and reports on 10 domains. Results for the H-CAHPS® hospital measures can be found at MNHealthScores.org. Please also visit the Minnesota Hospital Association’s Hospital Quality Report for an expanded list of H-CAHPS® measures at mnhospitalquality.org.

Cost measures

A new report was published in December 2014 by MNMCM that allows consumers for the first time to compare the total cost of care at medical groups across the state.

Costs from more than 1.5 million patients were included in the report, which is the nation’s most comprehensive look at the total cost of care. Information is available for 115 medical groups, representing 1,052 clinics across Minnesota and in neighboring communities on MNHealthScores.org.

Health Information Technology (HIT) measure

1,293 clinics in Minnesota and bordering states responded to the 2015 Health Information Technology (HIT) Ambulatory Clinic Survey. The 2015 response rate was 80 percent, compared to 86 percent in 2014 and 80 percent in 2013.

We report milestones achieved under adoption, use, and exchange at MNHealthScores.org.

- **Adopt:** Information about a patient and the care the patient needs is recorded in an electronic health record (EHR) instead of a paper medical record.
- **Utilization:** A patient’s doctor uses the EHR to order lab tests, track health problems and improve the patient’s care.
- **Exchange:** A patient’s information is sent and received in a secure manner between the doctors involved in the patient’s care.

Ninety-five percent of clinics have an EHR installed and have it in use in all areas of their clinics. This shows expanded use of EHRs across and within clinics; in 2014, 91 percent of clinics met this threshold, and in 2013 it was 83 percent.

The advancements of EHR utilization continue to increase over time. The most advanced phase of utilization, which includes data benchmarking and creating patient preventive exam reminders, saw the greatest reported increase from 44 percent of clinics in 2013 to 60 percent of clinics reporting in 2014 and 2015.

The ability of clinics to electronically send patient care information directly to other sites of care, both in and out-of-network, increased substantially: 78 percent of clinics exchanged patient information within their network as compared to 55 percent last year; and in 2015, two-thirds of clinics are able to exchange patient information with hospitals outside of their network.

The HIT Survey will be fielded again in 2016. MNMCM will continue to collaborate with HIT stakeholders statewide to implement a survey that provides a comprehensive assessment of HIT adoption, utilization, and exchange as well as continue to incorporate Meaningful Use Stage 2 guidelines.

Executive Summary

Hospital measures

For more information on hospital measures developed by the Agency for Healthcare Research and Quality (AHRQ) and Centers for Medicare and Medicaid Services (CMS), see page 201.

Results for AHRQ, CMS, and H-CAHPS hospital measures can be found at MNHealthScores.org.

Changes to the Report

This report features an indicator (*) for the **Top 5 performers** for medical groups and **Top 15 performers** for clinics. This is aligned with our consumer-focused website, MNHealthScores.org. In 2014's report, Top 15 performers were identified at both the medical group and clinic level.

Charts for clinic and medical group level results are no longer included in this report since the newly re-designed MNHealthScores.org provides this information in convenient, sortable tables for view and download.

There were several new measures added to this year's report:

- Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening
- Pediatric Preventive Care: Overweight Counseling
- Spinal Surgery: Lumbar Discectomy/Laminotomy
- Spinal Surgery: Lumbar Spinal Fusion
- Total Knee Replacement (functional status)

There were several measures that underwent a measure specification change:

- Optimal Diabetes Care
- Optimal Vascular Care
- Optimal Asthma Control - Children
- Optimal Asthma Control - Adults
- Controlling High Blood Pressure

In 2014, the **Cervical Cancer Screening** measure underwent review by the MNCM Measurement and Review Committee (MARC) to compare the administrative method of data collection to the hybrid method. The measure was suppressed from public reporting in 2014. Results for this measure, using the hybrid data collection method, are included in the 2015 report.

Measure Overview

The measures in this 2015 *Health Care Quality Report* were recommended by MNMCM's Measurement and Reporting Committee (MARC) and approved by our Board of Directors. We have expanded, revised, and retired measures to stay aligned with evidence-based guidelines. Measurement changes across years are reflected in **Table 1**.

TABLE 1: PERFORMANCE MEASURES OVER THE YEARS

Measures	Report Year											
	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015

* Childhood Immunization Status - Combo 2 only
 ** Chlamydia Screening in Women - Ages 16-25
 *** Controlling High Blood Pressure - <=140/90 mmHg
 ^^ Optimal Diabetes Care - Hem A1c <=8, Blood Pressure <130/85, LDL-C <130 mg/dl, Aspirin Use, Tobacco Free
 ^^ Optimal Diabetes Care - Hem A1c <=8, Blood Pressure <130/80, LDL-C <100 mg/dl, Aspirin Use, Tobacco Free
 # Optimal Diabetes Care - Hem A1c <7, Blood Pressure <130/80, LDL-C <100 mg/dl, Aspirin Use, Tobacco Free
 ~ Optimal Vascular Care - Blood Pressure <130/80, LDL-C <100 mg/dl, Aspirin Use, Tobacco Free
 ^ Optimal Vascular Care - Blood Pressure <140/90 if co-morbidity of diabetes, <130/80 if IVD only, LDL-C <100 mg/dl, Aspirin Use, Tobacco Free
 ~ Use of Appropriate Medications for People with Asthma (Ages 5-56)
 ~ Colorectal Cancer Screening (Ages 51-80)
 ~ Cancer Screening Combined (Breast, Cervical, Colorectal) (Ages 51-80)
 < In 2009 reported AHRQ measures only; in 2010 and 2011 reported AHRQ and CMS hospital measures
 + Breast Cancer Screening (Ages 50-69)
 ## Cervical Cancer Screening - administrative measure
 *** Controlling High Blood Pressure <140/90mmHg
 ^^ Optimal Diabetes Care - Hem A1c <8, Blood Pressure <140/90, LDL-C <100 mg/dl, Aspirin Use, Tobacco Free
 ~ Optimal Vascular Care - Blood Pressure <140/90, LDL-C <100 mg/dl, Aspirin Use, Tobacco Free
 # Optimal Asthma Care - Asthma well controlled, patient hospital and emergency room visits <2, written asthma management plan
 ® Total Knee Replacement - three process measures

Measure Overview

The 2015 *Health Care Quality Report* is the second report to feature information on all three elements necessary to reach optimal health care performance: quality, patient experience and cost.

The Quality section features information on **32 measures**. There are seven new ambulatory care measures: Pediatric Prevent Care: Adolescent Mental Health and/or Depression Screening, Pediatric Preventive Care: Overweight Counseling, Spinal Surgery: Lumbar Discectomy/Laminotomy (two measures), Spinal Surgery: Lumbar Spinal Fusion (two measures) and Total Knee Replacement (functional status). There were six measures with measure specification changes in 2015: Optimal Diabetes Care, Optimal Vascular Care, Optimal Asthma Control - Adults Ages 18-50, Optimal Asthma Control - Children Ages 5-17 Cervical Cancer Screening and Controlling High Blood Pressure. The remaining ambulatory care quality measures are organized into the following categories based on the statewide average:

- **Increases:** Large, moderate, and small
- **Decreases:** Large, moderate, and small

Please see page 408 for category definitions.

- Two measures had **large increases** in their statewide average: Immunizations for Adolescents and Avoidance of Antibiotics in the Treatment of Adult Bronchitis.
- Two measures had **moderate increases** in their statewide average: Depression PHQ-9 Follow-Up at Six Months and Depression PHQ-9 Follow-Up at 12 Months.
- Eight measures had **small increases** in their statewide average: Colorectal Cancer Screening, Chlamydia Screening in Women, Depression Response at Six Months, Appropriate Testing for Children with Pharyngitis, Depression Response at Twelve Months, Appropriate Treatment for Children with URI, Depression Remission at Six Months and Depression Remission at 12 Months.
- Six measures had **small decreases** in their statewide average: Use of Spirometry Testing in the Assessment and Diagnosis of COPD, Maternity Care: Primary C-Section Rate, PHQ-9 Utilization, Breast Cancer Screening, Follow-up Care for Children Prescribed ADHD Medication and Childhood Immunization Status (Combo 3).

In 2015, **no measures had moderate or large decreases in statewide rates between 2014 and 2015**; therefore, those categories are not included in this report.

Two types of measures are included in this section: **Direct Data Submission (DDS)** measures and **HEDIS** measures. DDS measures can be reportable on both the clinic and/or medical group levels. These measures relied on data specifications published in the 2015 Direct Data Submission Guides for each applicable measure. These measures are aligned with clinical guidelines established by the Institute for Clinical Systems Improvement (ICSI). This report includes 18 DDS measures: Pediatric Preventive Care: Adolescent Mental Health Screening, Pediatric Preventive Care: Overweight Counseling, Spinal Surgery: Lumbar Discectomy/Laminotomy, Spinal Surgery: Lumbar Spinal Fusion, Total Knee Replacement, Optimal Diabetes Care, Optimal Vascular Care, Optimal Asthma Control - Adults Ages 18-50, Optimal Asthma Control - Children Ages 5-17, Depression PHQ-9 Follow-up at Six Months, Depression PHQ-9 Follow-up at 12 Months, Colorectal Cancer Screening, Depression Response at Six Months, Depression Response at 12 Months, Depression Remission at Six Months, Depression Remission at 12 Months, Maternity Care: Primary C-Section Rate and PHQ-9 Utilization.

HEDIS measures use data collected from health plan claims data. Health plan data collection uses either the administrative method (claims only) or hybrid method (claims plus chart review). Measures using health plan data relied on National Committee for Quality Assurance's (NCQA) HEDIS specifications, which are also aligned with ICSI's clinical guidelines. HEDIS is a national set of standardized performance measures originally designed for the managed care industry.

Measure Overview

The measures have been adopted for use by MNMCM to evaluate the performance of medical groups. MNMCM reports on 11 HEDIS measures: Cervical Cancer Screening, Controlling High Blood Pressure, Immunizations for Adolescents, Avoidance of Antibiotics in the Treatment of Adult Bronchitis, Chlamydia Screening in Women, Appropriate Treatment for Children with URI, Use of Spirometry Testing in the Assessment and Diagnosis of COPD, Breast Cancer Screening, Follow-up Care for Children Prescribed ADHD Medication and Childhood Immunization Status (Combo 3).

The Quality section also features information on **hospital quality measures**. These measures are developed by the Agency for Healthcare Research and Quality (ARHQ) and the Centers for Medicare and Medicaid Services (CMS). Results are provided to MNMCM by the Minnesota Hospital Association (MHA) for public reporting.

The **Patient Experience** section features information on both ambulatory care and hospital patient experience. The ambulatory care patient experience data utilizes the CG-CAHPS 12-month survey and is implemented throughout the state every-other-year. In 2013, MNMCM published the first year of statewide patient experience survey results. This year's report includes 2015 Patient Experience of Care results. The hospital patient experience data utilizes the H-CAHPS survey designed for hospitals, and is reported annually. These results are also provided to MNMCM by MHA for public reporting.

The **Cost** section includes information on Total Cost of Care. There is Total Cost of Care Overall, which is also segmented by adults and pediatric patients. This measure uses data (commercial only) collected from four health plans in Minnesota: Blue Cross Blue Shield of Minnesota, HealthPartners, Medica and PreferredOne. It includes all costs associated with treating patients, including professional, facility inpatient and outpatient, pharmacy, lab, radiology, ancillary and behavioral health services.

Finally, the **Health Information Technology** section includes information on how well ambulatory care clinics have integrated electronic medical records into their practices. This information is based on an annual survey conducted by MNMCM on behalf of the Minnesota Department of Health.

See the Methods appendix for more information on the methodology for each measure. In the Results by Measure section, results are listed with a description of the measure; charts, tables and figures describing the results; and a listing of performance highlights for that measure.

Please see next page.

RESULTS BY MEASURE

New Measures/Measures with Specification Changes for 2015 Reporting

Section Contents

- **Cervical Cancer Screening** – Measures the percentage of women ages 21-64 who were screened for cervical cancer during the measurement year.
- **Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening** – Measures the percentage of pediatric patients ages 12-17 who had a documented mental health and/or depression screening at a well-child visit.
- **Pediatric Preventive Care, Overweight Counseling** – Measures the percentage of pediatric patients ages 3-17 who had an overweight or obesity assessment at a well-child visit and if the BMI percentile is greater than or equal to 85, had appropriate documentation of counseling for physical activity and nutrition.
- **Spinal Surgery: Lumbar Discectomy/Laminotomy measures**
 - Percent of procedures with both pre-operative and three months post-operative Oswestry Disability Index (ODI) administered.
 - Average change in ODI at three months post-operative (functional status).
- **Spinal Surgery, Lumbar Spinal Fusion measures**
 - Percent of procedures with both pre-operative and one year post-operative Oswestry Disability Index (ODI) administered.
 - Average change in ODI at one year post-operative (functional status).
- **Total Knee Replacement measures**
 - Percent of procedures with both pre-operative and one year post-operative Oxford Knee Score (OKS) administered.
 - Average OKS change at one year post-operative (functional status).
- **Optimal Diabetes Care** – Measures the percentage of adult patients who have type 1 or type 2 diabetes with optimally managed modifiable risk factors.
- **Optimal Vascular Care** – Measures the percentage of adult patients who have ischemic vascular disease (IVD) with optimally managed modifiable risk factors.
- **Optimal Asthma Control** – Measures the percentage of children (ages 5-17) and adult (ages 18-50) patients who have asthma and meet specified targets to control their asthma.
- **Controlling High Blood Pressure** – Measures the percentage of patients ages 18-85 who had a diagnosis of hypertension (HTN) and whose blood pressure was adequately controlled during the measurement year.

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Cervical Cancer Screening

This measures the percentage of women ages 21-64 who were screened for cervical cancer during the measurement year using either of two criteria: women age 21-64 who had a cervical cytology performed every three years or women age 30-64 who had cervical cytology/human papillomavirus co-testing performed every five years.

The data collection method changed from administrative to hybrid. Due to this change, no trend data is available for this measure at this time.

The statewide rate for Breast Cancer Screening is 72 percent. **Table 2** displays the details of this statewide rate.

Data for this measure are collected from health plan claims.

TABLE 2: STATEWIDE RATE FOR CERVICAL CANCER SCREENING

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Cervical Cancer Screening	71.8%	70.9%-72.7%	6,231	9,941	409,247

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

THERE IS NO TREND CHART SINCE DATA COLLECTION METHODOLOGY CHANGED THIS YEAR.

PERFORMANCE HIGHLIGHTS FOR CERVICAL CANCER SCREENING

Medical Group Results

Highest performers in 2015

Medical group results showed that an average of 78 percent of women 21-64 years of age received cervical cancer screening. **Essentia Health – Central Region** set the benchmark of 90 percent. Six out of 24 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Essentia Health - Central Region*
- Unity Family Healthcare – Avon*
- Fairview Medical Group*
- Mayo Clinic Health System-Owatonna*
- Park Nicollet Health Services*
- Allina Health Specialties

Biggest improvement from 2014–2015

Not applicable due to change in data collection methodology.

Medical group performance over time (2013-2015)

Not applicable due to change in data collection methodology.

Please see next page.

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening

This measure assesses the percentage of adolescent patients age 12-17 who was administered a mental health and/or depression screening tool at a well-child visit. The following tools were acceptable for this measure:

- Patient Health Questionnaire - 9 item version (PHQ-9)
- PHQ-9M Modified for Teens/Adolescents
- Kutcher Depression Scale (KADS)
- Beck Depression Inventory II (BDI-II)
- Beck Depression Inventory Fast Screen (BDI-FS)
- Child Depression Inventory (CDI)
- Child Depression Inventory II (CDI-2)
- Patient Health Questionnaire - PHQ-2
- Pediatric Symptom Checklist - 17 items (PSC-17)
- Pediatric Symptom Checklist - 35 items (PSC-35) or Youth Self Report (PCS Y-SR)
- Global Appraisal of Individual Needs (GAIN-SS) screens for mental health and substance abuse

The statewide rate for this measure is 40 percent. **Table 3** displays the details of this statewide rate. This is a first year measure so trending over time is not available.

Data collected for this measure are submitted directly to MNMCM by medical groups from electronic health records or paper-based medical charts.

TABLE 3: STATEWIDE RATE FOR PEDIATRIC PREVENTIVE CARE: ADOLESCENT MENTAL HEALTH SCREENING

	Statewide Average (Weighted)	95% CI	Numerator (Patients who were screened)	Denominator (Patients Sampled)	Total Eligible
Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening	39.9%	39.6%-40.2%	37,051	108,188	121,399

THERE IS NO TREND CHART BECAUSE THIS IS THE FIRST YEAR OF PUBLIC REPORTING FOR THIS MEASURE.

PERFORMANCE HIGHLIGHTS FOR PEDIATRIC PREVENTIVE CARE: ADOLESCENT MENTAL HEALTH AND/OR DEPRESSION SCREENING

Clinic Results

Highest performers in 2015

Clinic results showed an average of 40 percent of pediatric patients ages 12-17 who had a documented mental health and/or depression screening at a well-child visit. **South Lake Pediatrics – Eden Prairie** set the benchmark of 100 percent. There were 143 of 512 clinics with rates and confidence interval fully above the statewide average. The high performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates Top 15 performers for this measure.

PERFORMANCE HIGHLIGHTS FOR PEDIATRIC PREVENTIVE CARE: ADOLESCENT MENTAL HEALTH AND/OR DEPRESSION SCREENING

Regional Clinic Results

Highest performers in 2015 by region

Clinic results showed differences in performance among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below based on their proportion of high-performing clinics from high to low. The number of high-performing clinics is shown along with the total number of clinic sites that submitted data for this measure. The high-performing clinics are listed in under their medical group name alphabetical order by region.

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Pediatric Preventive Care: Overweight Counseling

This measure assesses the percentage of pediatric patients ages 3-17 who had an overweight or obesity assessment at a well-child visit. If the BMI percentile was greater than or equal to 85, the patient had appropriate documentation of counseling for physical activity and nutrition.

The statewide rate for this measure is 85 percent. **Table 4** displays the details of this statewide rate. This is a first year measure so trending over time is not available.

Data collected for this measure are submitted directly to MNMCM by medical groups from electronic health records or paper-based medical charts.

TABLE 4: STATEWIDE RATE FOR PEDIATRIC PREVENTIVE CARE: OVERWEIGHT COUNSELING

	Statewide Average	95% CI	Numerator (Patients who received counseling)	Denominator (Patients Sampled)	Total Eligible
Pediatric Preventive Care: Overweight Counseling	85.3%		80,536	97,758	122,627

THERE IS NO TREND CHART BECAUSE THIS IS THE FIRST YEAR OF PUBLIC REPORTING FOR THIS MEASURE.

PERFORMANCE HIGHLIGHTS FOR PEDIATRIC PREVENTIVE CARE: OVERWEIGHT COUNSELING

Clinic Results

Highest performers in 2015

Clinic results showed an average of 85 percent of pediatric patients ages 3-17 had appropriate documentation of counseling for physical activity and nutrition if their BMI percentile from an overweight or obesity assessment was greater than or equal to 85. There were **71 clinics that set the benchmark of 100 percent**. There were 229 of 458 clinics with rates and confidence interval fully above the statewide average. The high performing clinics are listed below in alphabetical order under their medical group name. Due to the high number of clinics that achieved a rate of 100%, there is no Top 15 performer indication.

PERFORMANCE HIGHLIGHTS FOR PEDIATRIC PREVENTIVE CARE: OVERWEIGHT COUNSELING

Regional Clinic Results

Highest performers in 2015 by region

Clinic results showed differences in performance among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below based on their proportion of high-performing clinics from high to low. The number of high-performing clinics is shown along with the total number of clinic sites that submitted data for this measure. The high-performing clinics are listed in under their medical group name alphabetical order by region.

PERFORMANCE HIGHLIGHTS FOR PEDIATRIC PREVENTIVE CARE: OVERWEIGHT COUNSELING

Medical Group Results

Highest performers in 2015

Results by medical group showed an average of 85 percent of pediatric patients ages 3-17 had appropriate documentation of counseling for physical activity and nutrition if their BMI percentile from an overweight/obesity assessment was greater than or equal to 85. **Eight medical groups** set the benchmark of 100 percent. There were 56 of 100 medical groups with rates and confidence interval fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Spinal Surgery: Lumbar Discectomy/Laminotomy

This is the first year of public reporting for the Spinal Surgery: Lumbar Discectomy/Laminotomy measure set. The eligible population for this measure are patients age 18 and older who underwent a lumbar discectomy/laminotomy procedure for a diagnosis of disc herniation with the date of procedure between 1/1/2013 and 12/31/2013. The following measures are reported in 2015:

- The percentage of patients with a lumbar discectomy/laminotomy procedure who had an ODI assessment tool administered both pre-operatively (within three months prior to the procedure) and three months post-operatively (six to 20 weeks after the procedure).
- Average post-operative functional status at three months who underwent a lumbar discectomy/laminotomy procedure as measured by the ODI assessment tool.

The statewide rate for administration of the ODI tool pre-operatively and post-operatively was 37 percent. **Table 5** displays the details of the statewide rate for the process measure.

The ODI assessment tool calculates a score based on the patient’s answers to questions about their low back pain and function. The score can be between 0 and 100, where a higher score reflects a higher degree of disability. The statewide average change in score after a Lumbar Discectomy/Laminotomy procedure was 22.0 points, with medical groups ranging between 10.9 and 32.9 points. See **Table 6** for the details of the functional status measure. These are first year measures so trending over time is not available.

Data collected for this measure are submitted directly to MNMCM by medical groups from electronic health records or paper-based medical charts.

TABLE 5: STATEWIDE RATE FOR LUMBAR DISCECTOMY/LAMINOTOMY PRE-OP AND POST-OP ODI AT THREE MONTHS

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Number of Lumbar D/L Procedures with Pre-Op & Post-Op ODI at Three Months	36.9%	34.8%-39.0%	725	1,966

THERE IS NO TREND CHART BECAUSE THIS IS THE FIRST YEAR OF PUBLIC REPORTING FOR THIS MEASURE.

PERFORMANCE HIGHLIGHTS FOR LUMBAR DISCECTOMY/LAMINOTOMY WITH PRE-OP & POST-OP ODI AT THREE MONTHS

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 37 percent of patients with a Lumbar Discectomy/Laminotomy procedure had an ODI assessment tool administered both pre-operatively (within three months prior to the procedure) and post-operatively (within six to 20 weeks after the procedure). **Institute for Low Back and Neck Care** set the benchmark of 72 percent. There were six of 16 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Institute for Low Back and Neck Care*
- University of Minnesota Physicians*
- Twin Cities Spine Center*
- Sanford Health - Fargo Region*
- Midwest Spine & Brain Institute*
- HealthPartners Clinics

PERFORMANCE HIGHLIGHTS FOR LUMBAR DISCECTOMY/LAMINOTOMY FUNCTIONAL STATUS AT THREE MONTHS

Medical Group Results

The following table displays medical group results for functional status at three months as measured by the ODI assessment tool. The medical groups are listed in order by rating. The statewide average change in score after Lumbar Discectomy/Laminotomy Surgery was 22.0 points. **Mayo Clinic** had the greatest improvement with an average score change of 32.9 points. There is no indication of Top performers due to there being less than 10 reportable medical groups for this measure.

TABLE 6: MEDICAL GROUP RESULTS FOR LUMBAR DISCECTOMY/LAMINOTOMY FUNCTIONAL STATUS AT THREE MONTHS

Medical Group Name	Result (Actual)	N (# used to calculate score)	Lower Bound of 95% CI	Upper Bound of 95% CI	Result (Expected)	Actual to Expected Ratio	Rating

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Spinal Surgery: Lumbar Spinal Fusion

This is the first year of public reporting for the Spinal Surgery: Lumbar Spinal Fusion measure set. The eligible population for this measure are patients age 18 and older who underwent a lumbar spinal fusion procedure between 1/1/2013 and 12/31/2013. The following measures are reported in 2015:

- The percentage of patients with a lumbar spinal fusion procedure who had an ODI assessment tool administered both pre-operatively (within three months prior to the procedure) and one year post-operatively (nine to 15 months after the procedure).
- Average post-operative functional status at one year who underwent a lumbar spinal fusion procedure as measured by the ODI assessment tool.

The statewide rate for administration of the ODI tool pre-operatively and post-operatively was 43 percent. **Table 7** displays the details of the statewide rate for the process measure.

The ODI assessment tool calculates a score based on the patient’s answers to questions about their low back pain and function. The score can be between 0 and 100, where a higher score reflects a higher degree of disability. The statewide average change in score after Lumbar Fusion Surgery is 16.7 points, with medical groups ranging between 11.2 and 19.5 points. See **Table 8** for the details of the functional status measure. These are first year measures so trending over time is not available.

Data collected for this measure are submitted directly to MNMCM by medical groups from electronic health records or paper-based medical charts.

TABLE 7: STATEWIDE RATE FOR LUMBAR SPINAL FUSION PRE-OP & POST-OP ODI AT ONE YEAR

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Number of Lumbar Fusion Procedures With Pre-Op & Post-Op ODI at One Year	42.6%	40.4%-44.7%	874	2,054

THERE IS NO TREND CHART BECAUSE THIS IS THE FIRST YEAR OF PUBLIC REPORTING FOR THIS MEASURE.

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Total Knee Replacement (TKR)

This is the first year of public reporting for the Total Knee Replacement functional status measure. The eligible population for this measure were patients age 18 and older who underwent a primary or revision total knee replacement procedure during the measurement period (January 1, 2013 to December 31, 2013). The following measures are reported in 2015:

- The percentage of patients with a total knee replacement procedure who have an OKS assessment tool administered both pre-operatively (within three months prior to the procedure) and one year post-operatively (nine to 15 months after the procedure).
- Average post-operative functional status at one year for patients who underwent a primary total knee replacement as measured by the OKS tool.

Three process measures were publicly reported in 2014. In 2015, MNCM will publicly report data on two measures: pre-operative and post-operative OKS tool administration and functional status as measured by the OKS tool. Only primary TKR procedures are reported for the functional status measure.

The statewide rate for administration of the OKS tool pre-operatively and post-operatively was 24 percent. **Table 9** displays the details of the statewide rate for the process measure.

The OKS assessment tool calculates a score based on the patient’s answers to questions about their knee pain and mobility. The score can be between 0 and 48, where a higher score reflects better knee function. The statewide average change in score after surgery for patients in Minnesota was 17.1 points, with medical groups ranging between 12.5 and 18.5 points. A higher number of points indicate greater improvement in a patient’s pain, function and mobility after surgery. See **Table 10** for the details of the functional status measure. This is the first year of reporting the functional status measure and so trending is not available.

TABLE 9: STATEWIDE RATE FOR NUMBER OF TKR WITH PRE-OP AND POST-OP OKS ADMINISTERED

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Number of TKR Procedures w/Pre-Op & Post-Op OKS	24.0%	23.1% - 24.8%	2,426	10,123

PERFORMANCE HIGHLIGHTS FOR TKR - NUMBER OF TKR PROCEDURES WITH PRE-OP AND POST-OP OKS

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 24 percent of patients with a TKR procedure had an OKS assessment tool administered both pre-operatively (within three months prior to the procedure) and one year post-operatively (nine to 15 months after the procedure). **Affiliated Community Medical Centers** set the benchmark of 66 percent. There were ten of 31 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Affiliated Community Medical Centers*
- Little Falls Orthopedics*
- Northern Orthopedics, Ltd.*
- Southwest Minnesota Orthopedics and Sports Medicine*
- The Orthopaedic & Fracture Clinic*
- Lake Region Healthcare
- Allina Health Clinics
- Mayo Clinic Health System
- Mayo Clinic
- Essentia Health - St. Mary's

Biggest improvement from 2014-2015

The greatest improvement since report year 2014 in administration of the ODI assessment tool pre-operatively and post-operatively at one year to patients who underwent a TKR procedure was made by **Southwest Minnesota Orthopedics and Sports Medicine**. Their score increased by more than 60 percentage points.

Medical group performance over time (2013-2015)

Not applicable because this is the second year of reporting this measure.

PERFORMANCE HIGHLIGHTS FOR PRIMARY TKR FUNCTIONAL STATUS AT ONE YEAR

Medical Group Results

The following table display medical group results for functional status for primary total knee replacement procedures at one year as measured by the OKS assessment tool. The medical groups are listed in order by rating. The statewide average change in score was 17.1 points. **Northern Orthopedics, Ltd.** had the greatest improvement with an average score change of 18.5 points. There is no indication of Top performers for this measure.

TABLE 10: MEDICAL GROUP RESULTS FOR PRIMARY TOTAL KNEE REPLACEMENT FUNCTIONAL STATUS AT ONE YEAR

Medical Group Name	Result (Actual)	N (# used to calculate score)	Lower Bound of 95% CI	Upper Bound of 95% CI	Result (Expected)	Actual to Expected Ratio	Rating
STATEWIDE AVERAGE	17.1	2,318					
Mayo Clinic	17.2	509	16.5	17.9	16.2	1.1	Above Average
Mayo Clinic Health System	15.9	205	14.6	17.1	16.9	0.9	Expected

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Optimal Diabetes Care*

This measures the percentage of patients with diabetes (Type 1 and Type 2) ages 18-75 who reached all four of the following treatment goals to reduce cardiovascular risk:

- Blood pressure less than 140/90 mmHg
- Hemoglobin A1c (HbA1c) less than 8
- Daily aspirin use for diabetes patients with a co-morbidity of ischemic vascular disease unless contraindicated
- Documented tobacco-free status

The statewide rate for Optimal Diabetes Care is 53 percent. **Table 11** displays the details of this statewide rate.

*For the 2015 report year, this composite measure included four components. In 2016, it will return to a five component composite.

Credit is given for achieving this composite rate when all four measure components are met. Data collected for this measure are submitted directly to MNMCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 11: STATEWIDE RATE FOR OPTIMAL DIABETES CARE

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients sampled)	Total Eligible
Optimal Diabetes Care	53.5%	53.3%-53.7%	131,847	245,241	249,878

THERE IS NO TREND CHART BECAUSE THE MEASURE SPECIFICATION CHANGED FOR THIS MEASURE.

PERFORMANCE HIGHLIGHTS FOR OPTIMAL DIABETES CARE

Clinic Results

Highest performers in 2015

Clinic results showed an average of 53 percent of patients with diabetes met all four required components in this measure. **Cromwell Medical Clinic - IHN** set the benchmark of 74 percent. There were 154 of 594 clinics with rates and confidence intervals fully above the statewide average. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure.

PERFORMANCE HIGHLIGHTS FOR OPTIMAL DIABETES CARE

Clinic Regional Results

Highest performers in 2015 by region

Clinic results showed differences in performance among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below based on their proportion of high-performing clinics from high to low. The number of high-performing clinics is shown along with the total number of clinic sites that submitted data for this measure. The high-performing clinics are listed under their medical group name in alphabetical order by region.

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Optimal Vascular Care*

This measures the percentage of patients ages 18-75 with vascular disease who reached these three treatment goals to reduce the risk of cardiovascular disease:

- Blood pressure less than 140/90 mmHg
- Daily aspirin use
- Documented tobacco-free status

The statewide rate for Optimal Vascular Care is 69 percent. **Table 12** displays the details of this statewide rate.

*For the 2015 report year, this composite measure included three components. In 2016, it will return to a four component composite.

Credit is given for achieving this composite rate when all four measure components are met. Data collected for this measure are submitted directly to MNMCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 12: STATEWIDE RATE FOR OPTIMAL VASCULAR CARE

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Optimal Vascular Care	69.3%	69.0%-69.6%	71,196	102,654	103,006

THERE IS NO TREND CHART BECAUSE THE MEASURE SPECIFICATION CHANGED FOR THIS MEASURE.

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Optimal Asthma Control

This measures the percentage of patients ages 5-17 and ages 18-50 with persistent asthma who have reached the following two targets to control their asthma:

- Evidence of well-controlled asthma determined through the use of an asthma control tool (e.g. Asthma Control Test (ACT); Childhood Asthma Control Test (C-ACT); Asthma Control Questionnaire (ACQ); and Asthma Therapy Assessment Questionnaire (ATAQ))
- Not at risk for elevated exacerbation as evidenced by patient-reported emergency department visits and hospitalizations

The statewide rate for Optimal Asthma Control is 59 percent for children ages 5-17 and 52 percent for adults ages 18-50. **Table 13** displays the details of this statewide rate for both populations.

Data collected for this measure are submitted directly to MNMCM by medical groups and clinics from electronic health records or paper-based medical charts.

TABLE 13: STATEWIDE RATE FOR OPTIMAL ASTHMA CONTROL - CHILDREN AND ADULTS

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Optimal Asthma Control - Children	59.3%	58.8%-59.7%	25,653	43,349	44,763
Optimal Asthma Control - Adults	52.3%	51.9%-52.7%	34,773	66,693	67,215

THERE IS NO TREND CHART BECAUSE THE MEASURE SPECIFICATION CHANGED FOR THIS MEASURE.

PERFORMANCE HIGHLIGHTS FOR OPTIMAL ASTHMA CONTROL - ADULTS

Medical Group Results

Highest performers in 2015

Results by medical group showed an average of 52 percent of adults ages 18-50 with asthma met all three required components of this measure. **St. Paul Allergy & Asthma Clinic, P.A.** set the benchmark of 95 percent. There were 28 of 97 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- St. Paul Allergy & Asthma Clinic, P.A.*
- Advancements in Allergy and Asthma Care*
- South Lake Pediatrics*
- Minnesota Allergy & Asthma Clinic, PA*
- Children's Respiratory & Critical Care Specialists*
- Wayzata Children's Clinic

NEW MEASURES/ MEASURES WITH SPECIFICATION CHANGES FOR 2015 REPORTING

Controlling High Blood Pressure

This measures the percentage of patients ages 18-85 with a diagnosis of hypertension, or high blood pressure, whose blood pressure was adequately controlled based on the following criteria:

- Patients ages 18-59 whose blood pressure was less than 140/90 mmHg
- Patients ages 60-85 with a diagnosis of diabetes whose blood pressure was less than 140/90 mmHg
- Patients ages 60-85 without a diagnosis of diabetes whose blood pressure was less than 150/90 mmHg

The representative blood pressure is the most recent blood pressure reading during the measurement year (as long as the blood pressure reading occurred following the hypertension diagnosis).

The statewide rate for Controlling High Blood Pressure was 76 percent. **Table 14** displays the details of the 2015 rate.

Data collected for this measure are from health plan claims and medical record review.

TABLE 14: STATEWIDE RATE FOR CONTROLLING HIGH BLOOD PRESSURE*

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Controlling High Blood Pressure	76.2%	75.6%-76.8%	12,263	17,537	254,690

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

THERE IS NO TREND CHART BECAUSE THE MEASURE SPECIFICATION CHANGED FOR THIS MEASURE.

PERFORMANCE HIGHLIGHTS FOR CONTROLLING HIGH BLOOD PRESSURE

Medical Group Results

Highest performers in 2015

Medical group results showed that an average of 77 percent of patients with high blood pressure were appropriately controlled. **Entira Family Clinics** set the benchmark of 95 percent. There were 15 of 82 medical groups with rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates Top 5 performer for this measure.

RESULTS BY MEASURE

Large Increase in Statewide Rate

Section Contents

- **Immunizations for Adolescents** - Measures the percentage of 13 year olds who had received one dose of meningococcal vaccine and one tetanus, diphtheria toxoids and acellular pertussis vaccine (Tdap) or one tetanus, diphtheria toxoids vaccine (Td) by their 13th birthday.
- **Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis** - Measures the percentage of adults 18-64 years of age with a diagnosis of acute bronchitis who were not dispensed an antibiotic prescription. A higher rate represents better performance.

LARGE INCREASE IN STATEWIDE RATE

Immunizations for Adolescents

This measures the percentage of 13 year olds who had received one dose of meningococcal vaccine and one tetanus, diphtheria toxoids and acellular pertussis vaccine (Tdap) or one tetanus, diphtheria toxoids vaccine (Td) by their thirteenth birthday.

The statewide rate for Immunizations for Adolescents is 75 percent. **Table 15** displays the details of the 2015 rate. **Figure 1** shows the average rate for this measure over time. The statewide rate has increased by 22 percentage points since 2012. An increase of 13 percentage points was seen between 2014 and 2015.

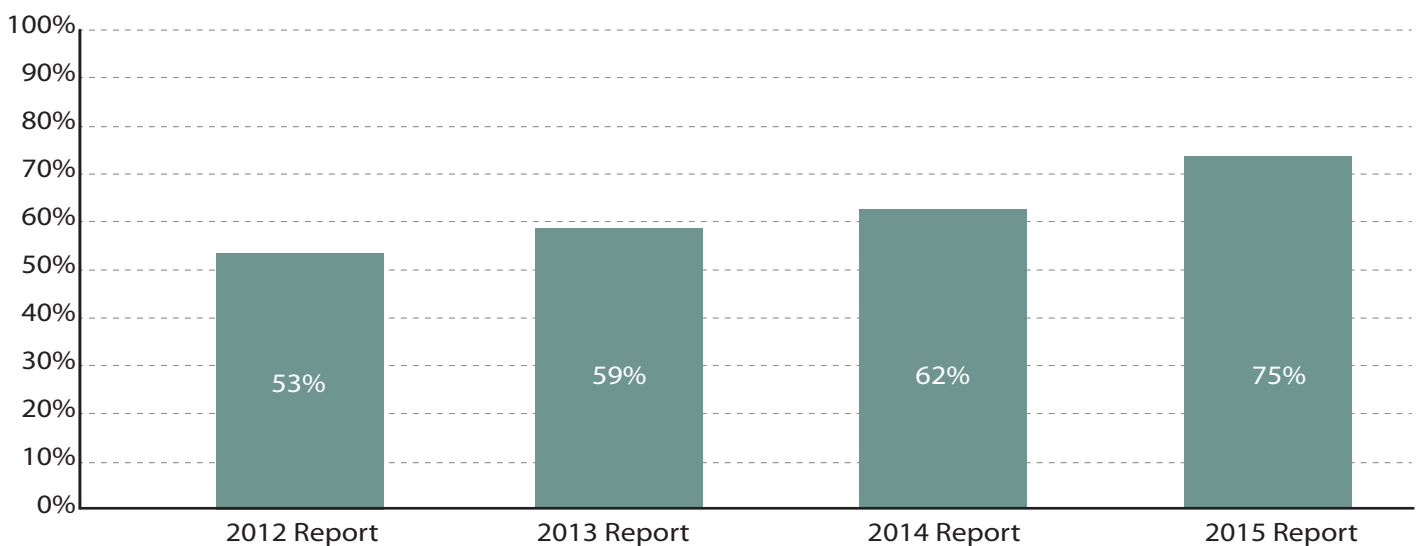

Data for this measure are collected from health plan claims, the Minnesota Immunization Information Connection registry (MIIC) and medical record review.

TABLE 15: STATEWIDE RATE FOR IMMUNIZATIONS FOR ADOLESCENTS*

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Immunizations for Adolescents	74.8%	73.6%-75.9%	4,056	5,628	28,906

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 1: STATEWIDE RATES FOR IMMUNIZATIONS FOR ADOLESCENTS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR IMMUNIZATIONS FOR ADOLESCENTS

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 80 percent of 13 year olds were up-to-date with all recommended immunizations by their thirteenth birthday. **Pediatric & Young Adult Medicine** set the benchmark of 96 percent. Twelve out of 38 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicated a Top 5 performer for this measure.

- Pediatric & Young Adult Medicine*
- Stillwater Medical Group*
- Olmsted Medical Center*
- Essentia Health - East Region*
- Wayzata Children's Clinic*
- Children's Clinic Network
- Southdale Pediatric Associates, Ltd
- HealthEast Clinics
- Mankato Clinic, Ltd.
- Park Nicollet Health Services
- Allina Health Specialties
- HealthPartners Clinics

Biggest improvement from 2014-2015

The greatest improvement since report year 2014 in Immunization for Adolescents (medical group results) was made by **Buffalo Clinic, PA – IHN**, whose score increased by more than 44 percentage points.

PERFORMANCE HIGHLIGHTS FOR IMMUNIZATIONS FOR ADOLESCENTS

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Five medical groups achieved consistently high performance and above average rates over the past three years for Immunizations for Adolescents:

- Children's Clinic Network
- HealthPartners Clinics
- Pediatric & Young Adult Medicine
- Southdale Pediatric Associates, Ltd
- Stillwater Medical Group

Thirteen medical groups showed consistent improvement over three years:

- Alexandria Clinic
- Entira Family Clinics
- Essentia Health - East Region
- Essentia Health - West
- HealthEast Clinics
- Hutchinson Health
- Lakeview Clinic
- Mankato Clinic, Ltd.
- Mayo Clinic Health System - Red Wing
- Park Nicollet Health Services
- Sanford Health - Fargo Region
- St. Cloud Medical Group NW, So., Cold Spring, Clear Water - IHN
- University of Minnesota Physicians

There were no medical groups with rates that consistently decrease over three years.

There were no medical groups with rates that were relatively stable over three years.

Fifteen medical groups did not have a discernable pattern over three years.

Please see next page.

LARGE INCREASE IN STATEWIDE RATE

Avoidance of Antibiotics in the Treatment of Adult Bronchitis

This measures the percentage of adults ages 18–64 with a diagnosis of acute bronchitis who were not dispensed an antibiotic prescription. A higher rate indicates appropriate treatment of adults with bronchitis (i.e., the proportion for whom antibiotics were not prescribed).

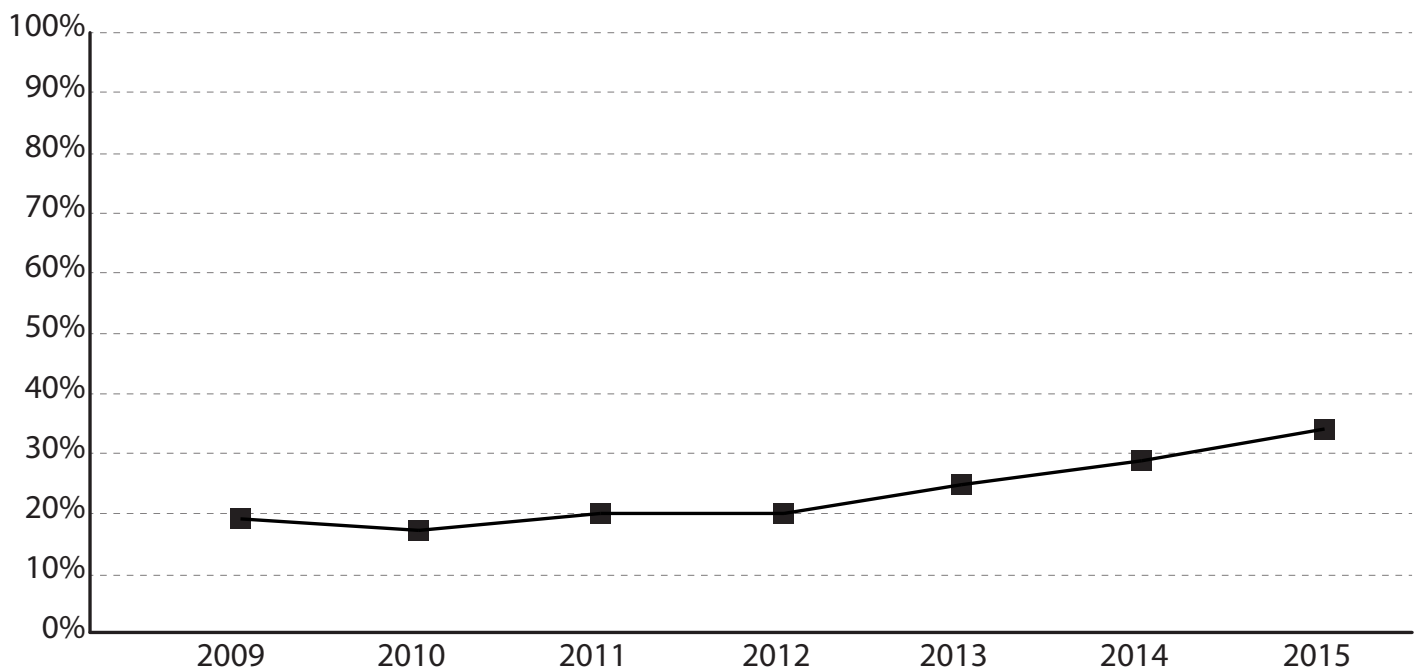

The statewide rate for Avoidance of Antibiotics in the Treatment of Adult Bronchitis is 34 percent. **Table 16** displays the details of the 2015 rate. **Figure 2** displays the statewide rates over time. The rate has increased since 2012 and increased by 14 percentage points from 2012 to 2015.

Data collected for this measure are from health plan data claims.

TABLE 16: STATEWIDE RATE FOR AVOIDANCE OF ANTIBIOTICS IN THE TREATMENT OF ADULT BRONCHITIS

	Statewide Average	95% CI	Numerator (Patients who did not receive an antibiotic)	Denominator
Avoidance of Antibiotics in the Treatment of Adult Bronchitis	33.9%	33.2%-34.6%	5,660	16,704

FIGURE 2: STATEWIDE RATES FOR AVOIDANCE OF ANTIBIOTICS IN THE TREATMENT OF ADULT BRONCHITIS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR AVOIDANCE OF ANTIBIOTICS IN THE TREATMENT OF ADULT BRONCHITIS

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 34 percent of adults ages 18-64 who were diagnosed with acute bronchitis were appropriately treated and not prescribed an antibiotic. **Minute Clinic** set the benchmark of 93 percent. Fourteen of 70 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- MinuteClinic*
- Target Clinic*
- HealthPartners Clinics*
- North Memorial*
- Hennepin County Medical Center (HCMC) Clinics*
- Stillwater Medical Group
- Emergency Physicians, P.A.
- St. Croix Regional Medical Center
- Express Healthcare
- Buffalo Clinic, PA – IHN
- Suburban Emergency Associates
- St. Luke's Clinics
- Park Nicollet Health Services
- Seven Day Clinic

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Avoidance of Antibiotics in the Treatment of Adult Bronchitis (medical group results) was made by **North Memorial**, who score increased by 35 percentage points.

PERFORMANCE HIGHLIGHTS FOR AVOIDANCE OF ANTIBIOTICS IN THE TREATMENT OF ADULT BRONCHITIS

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Four medical groups achieved consistently high performance and above average rates over the past three years for Avoidance of Antibiotics in the Treatment of Adult Bronchitis:

- Express Healthcare
- HealthPartners Clinics
- MinuteClinic
- Target Clinic

Eight medical groups showed consistent improvement over three years:

- FamilyHealth Medical Clinics
- Glenwood Medical Center
- Mayo Clinic Health System-Owatonna
- North Memorial
- Park Nicollet Health Services
- St. Luke's Clinics
- Stillwater Medical Group
- Unity Family Healthcare – Avon

Two medical group showed a consistent decrease over three years:

- Alexandria Clinic
- Winona Health Services

Seven medical groups had rates that were relatively stable over three years:

- Apple Valley Medical Clinic
- Entira Family Clinics
- Fairview Express Care
- Fairview Medical Group
- HealthEast Clinics
- Lake Region Healthcare
- Mayo Clinic Health System - Albert Lea and Austin

Thirty-five medical groups did not have a discernable pattern over three years.

Please see next page.

RESULTS BY MEASURE

Moderate Increase in Statewide Rate

Section Contents

- **PHQ-9 Follow-up at Six Months** - Based on the denominator of patients age 18 and older with major depression or dysthymia and initial PHQ-9 score is greater than nine, this measures the percent of patients who had a follow-up PHQ-9 test at six months from the index contact date.
- **PHQ-9 Follow-up at 12 Months** - Based on the denominator of patients age 18 and older with major depression or dysthymia and initial PHQ-9 score is greater than nine, this measures the percent of patients who had a follow-up PHQ-9 test at 12 months from the index contact date.

MODERATE INCREASE IN STATEWIDE RATE

PHQ-9 Follow-up at Six Months

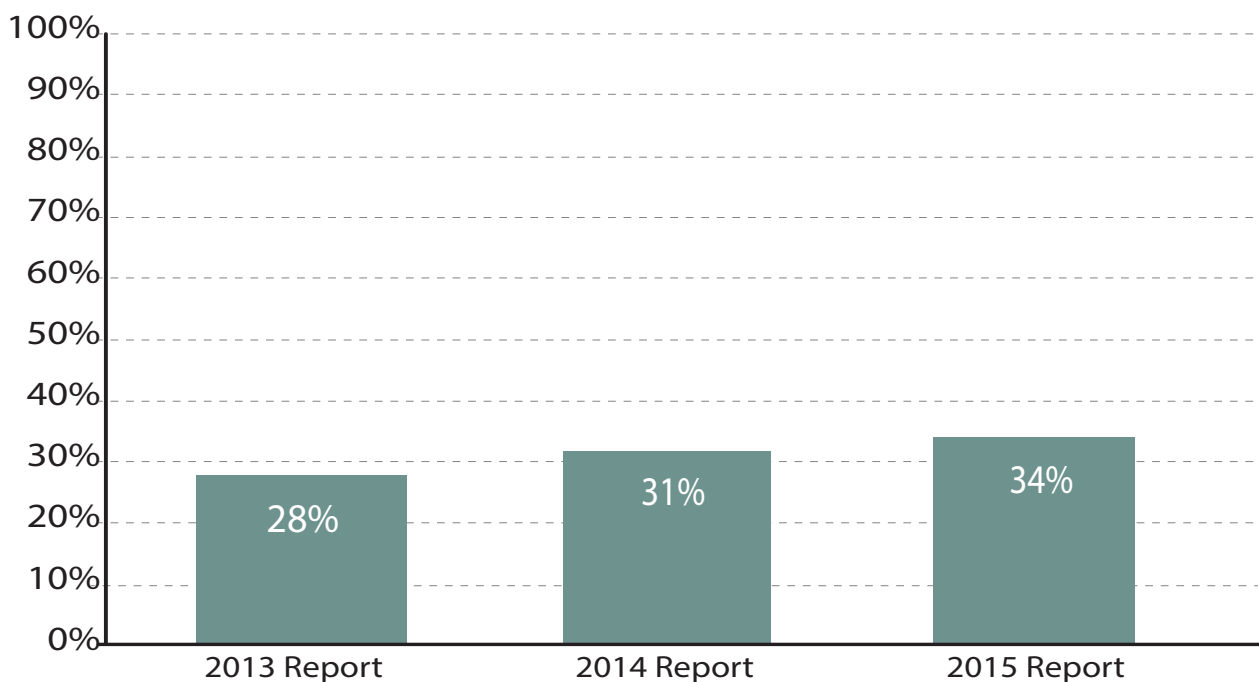

PHQ-9 Follow-up at Six Months is defined as the percentage of patients with a diagnosis of major depression or dysthymia and a PHQ-9 score at the index contact greater than nine who have a follow-up PHQ-9 test at six months from the index contact date. The statewide rate for PHQ-9 Follow-up at Six Months is 34 percent. **Table 17** displays the details of the statewide rate. **Figure 3** displays the statewide rates over time for PHQ-9 Follow-Up at Six Months. The rate increased by three percentage points from 2014 to 2015.

Data collected for this measure are submitted directly to MNCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 17: STATEWIDE RATE FOR PHQ-9 FOLLOW-UP AT SIX MONTHS

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
PHQ-9 Follow-Up at Six Months	34.1%	33.8%-34.4%	33,724	98,786

FIGURE 3: STATEWIDE RATES FOR PHQ-9 FOLLOW-UP AT SIX MONTHS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 FOLLOW-UP AT SIX MONTHS

Clinic Results

Highest performers in 2015

Clinic results showed an average of 34 percent of patients with a diagnosis of major depression or dysthymia and a PHQ-9 score at the index contact greater than nine had a follow-up PHQ-9 test at six months from the index contact date. **Entira Family Clinics - Highland** set the benchmark of 79 percent. There were 122 of 483 clinics with rates and confidence intervals fully above the statewide average. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure

PERFORMANCE HIGHLIGHTS FOR PHQ-9 FOLLOW-UP AT SIX MONTHS

Regional Clinic Results

Highest performers in 2015 by region

Clinic results showed differences in performance among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below based on their proportion of high-performing clinics from high to low. The number of high-performing clinics is shown along with the total number of clinic sites that submitted data for this measure. The high-performing clinics are listed under their medical group name in alphabetical order by region.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 FOLLOW-UP AT SIX MONTHS

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 34 percent of patients with a diagnosis of major depression or dysthymia and a PHQ-9 score at the index contact greater than nine had a follow-up PHQ-9 test at six months from the index contact date. **Entira Family Clinics** set the benchmark of 58 percent. There were 13 of 112 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure

- Entira Family Clinics*
- Allina Health Specialties*
- Allina Health Clinics*
- Essentia Health - St. Mary's*
- Mental Health Resources*
- Essentia Health - East Region
- Park Nicollet Health Services
- Essentia Health - Fosston
- Family Life Center
- Mankato Clinic, Ltd.
- FirstLight Health System
- Olmsted Medical Center
- Fairview Health Services

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in PHQ-9 Follow-up at Six Months (medical group results) was made by **Essentia Health - Fosston**, whose score increased by 19 percentage points.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 FOLLOW-UP AT SIX MONTHS

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Seven medical groups achieved consistently high performance and above average rates over the past three years for PHQ-9 Follow-up at Six Months:

- Allina Health Clinics
- Allina Health Specialties
- Entira Family Clinics
- Essentia Health - East Region
- Family Life Center
- Mankato Clinic, Ltd.
- Olmsted Medical Center

Eighteen medical groups showed consistent improvement over three years:

- Associated Clinic of Psychology
- CentraCare Health
- Entira Family Clinics
- Essentia Health - Central Region
- Essentia Health - Fosston
- Essentia Health - St. Mary's
- Essentia Health - West
- FirstLight Health System
- HealthPartners Clinics
- Mayo Clinic Health System
- Native American Community Clinic
- North Clinic
- North Memorial
- Open Door Health Center
- Park Nicollet Health Services
- Sibley Medical Center DBA Ridgeview Sibley Medical Center
- University of Minnesota Physicians
- Western Mental Health Center, Inc.

Five medical groups showed consistent decreases over three years:

- Minnesota Mental Health Clinics (Eagan, Edina, Lakeville, Maplewood, Minneapolis, Woodbury)
- Sawtooth Mountain Clinic
- BHSI
- Carver County Mental Health Program
- Renville County Hospital and Clinics

Eight medical groups had rates that were relatively stable over three years:

- Affiliated Community Medical Centers
- Altru Health System
- Apple Valley Medical Clinic
- Caritas Mental Health Clinic
- CentraCare Family Health Center
- Lakeland Mental Health Center
- People Incorporated Stark Mental Health Clinic
- St. Luke's Clinics

Fifty-seven medical groups did not have a discernable pattern over three years.

Please see next page.

MODERATE INCREASE IN STATEWIDE RATE

PHQ-9 Follow-up at 12 Months

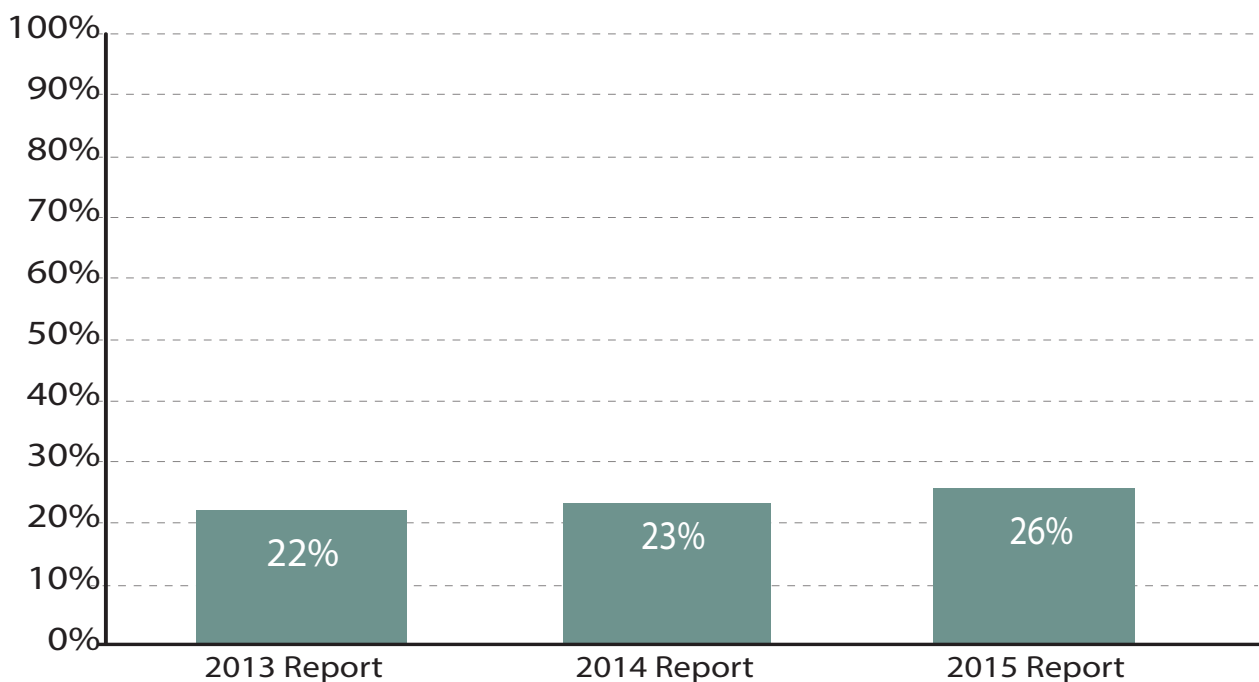

PHQ-9 Follow-up at 12 Months is defined as the percentage of patients with a diagnosis of major depression or dysthymia and a PHQ-9 score at the index contact greater than nine who have a follow-up PHQ-9 test at 12 months from the index contact date. The statewide rate for PHQ-9 Follow-up at 12 Months is 26 percent. **Table 18** displays the details of the statewide rate. **Figure 4** displays the statewide rates over time for PHQ-9 Follow-Up at 12 Months. The rate increased almost three percentage points from 2014 to 2015.

Data collected for this measure are submitted directly to MNCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 18: STATEWIDE RATE FOR PHQ-9 FOLLOW-UP AT 12 MONTHS

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
PHQ-9 Follow-Up at 12 Months	25.8%	25.6%-26.1%	23,972	92,738

FIGURE 4: STATEWIDE RATES FOR PHQ-9 FOLLOW-UP AT 12 MONTHS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 FOLLOW-UP AT 12 MONTHS

Clinic Results

Highest performers in 2015

Clinic results showed an average of 26 percent of patients with a diagnosis of major depression or dysthymia and a PHQ-9 score at the index contact greater than nine had a follow-up PHQ-9 test at 12 months from the index contact date. **Allina Health - Hopkins (Aspen)** set the benchmark of 67 percent. There were 102 of 459 clinics with rates and confidence intervals fully above the statewide average. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 FOLLOW-UP AT 12 MONTHS

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 26 percent of patients with a diagnosis of major depression or dysthymia and a PHQ-9 score at the index contact greater than nine had a follow-up PHQ-9 test at 12 months from the index contact date. **Essentia Health - Fosston** set the benchmark of 48 percent. There were 12 of 105 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure

- Essentia Health - Fosston*
- Essentia Health - East Region*
- Allina Health Clinics*
- Allina Health Specialties*
- Essentia Health - St. Mary's*
- Olmsted Medical Center
- Mankato Clinic, Ltd.
- Essentia Health - Central Region
- CentraCare Family Health Center
- Native American Community Clinic
- Western Mental Health Center, Inc.
- Essentia Health - West

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in PHQ-9 Follow-up at 12 Months (medical group results) was made by **Essentia Health - Fosston**, whose score increased by 25 percentage points.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 FOLLOW-UP AT 12 MONTHS

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Five medical groups achieved consistently high performance and above average rates over the past three years for PHQ-9 Follow-up at 12 Months:

- Allina Health Clinics
- Allina Health Specialties
- Essentia Health - East Region
- Mankato Clinic, Ltd.
- Olmsted Medical Center

Twelve medical groups showed consistent improvement over three years:

- AALFA Family Clinic
- Allina Health Clinics
- Apple Valley Medical Clinic
- Associated Clinic of Psychology
- CentraCare Family Health Center
- Chippewa County Montevideo Hospital & Medical Clinic
- Essentia Health - Central Region
- Essentia Health - Fosston
- FirstLight Health System
- Sibley Medical Center DBA Ridgeview Sibley Medical Center
- United Family Medicine
- University of Minnesota Physicians

Four medical groups showed consistent decreases over three years:

- Cuyuna Regional Medical Center
- FamilyHealth Medical Clinics
- Hutchinson Health
- Ridgeview Clinics

Sixteen medical groups had rates that were relatively stable over three years:

- Altru Health System
- CentraCare Health
- Entira Family Clinics
- Family Life Center
- HealthEast Clinics
- Integrity Health Network
- Lakewood Health System
- North Clinic
- Northern Pines Mental Health Center, Inc.
- Northwest Family Physicians
- People Incorporated Stark Mental Health Clinic
- Riverwood Healthcare Center
- Stevens Community Medical Center
- United Hospital District Clinic
- Vibrant Health Family Clinics and Minnesota Health Network
- Winona Health Services

Forty-five medical groups did not have a discernable pattern over three years.

Please see next page.

RESULTS BY MEASURE

Small Increase in Statewide Rate

Section Contents

- **Colorectal Cancer Screening** – Measures the percentage of adults ages 51-75 who were up to date with appropriate colorectal cancer screening exams. Appropriate exams include colonoscopy, sigmoidoscopy, or fecal blood tests.
- **Chlamydia Screening in Women** – Measures the percentage of sexually active women ages 16-24 who had at least one test for chlamydia infection during the measurement year.
- **Appropriate Testing for Children with Pharyngitis** – Measures the percentage of children 2-18 years of age with pharyngitis (sore throat) who were given an antibiotic and a group A streptococcus (strep) test for the episode period (July 1 of prior year to June 30 of measurement year). A higher rate represents better performance.
- **Appropriate Treatment for Children with Upper Respiratory Infection (URI)** – Measures the percentage of children ages three months to 18 years of age with a diagnosis of URI who were not given an antibiotic prescription within three days of the episode period (July 1 of prior year to June 30 of measurement year). A higher rate represents better performance.
- **Depression Response at Six Months** – Based on the denominator of patients age 18 and older with major depression or dysthymia and initial PHQ-9 score is greater than nine, this measures the percent of patients whose PHQ-9 score at six months decreased at least 50 percent from their initial PHQ-9 score.
- **Depression Response at 12 Months** - Based on the denominator of patients age 18 and older with major depression or dysthymia and initial PHQ-9 score is greater than nine, this measures the percent of patients whose PHQ-9 score at 12 months decreased at least 50 percent from their initial PHQ-9 score.
- **Depression Remission at Six Months** – Based on the denominator of patients age 18 and older with major depression or dysthymia and initial PHQ-9 score is greater than nine, this measures the percent of patients whose six month PHQ-9 score is less than five. This is the definition of remission.
- **Depression Remission at 12 Months** – Based on the denominator of patients age 18 and older with major depression or dysthymia and initial PHQ-9 score is greater than nine, this measures the percent of patients whose 12 month PHQ-9 score is less than five. This is the definition of remission.

SMALL INCREASE IN STATEWIDE RATE

Colorectal Cancer Screening

This measures the percentage of adults ages 51-75 who are up-to-date with the appropriate screening for colorectal cancer. Appropriate screenings for purposes of this measure include one of the following:

- Fecal occult blood test (FOBT) during the measurement year, or
- Flexible sigmoidoscopy during the measurement year or the four years prior, or
- Colonoscopy during the measurement year or the nine years prior.

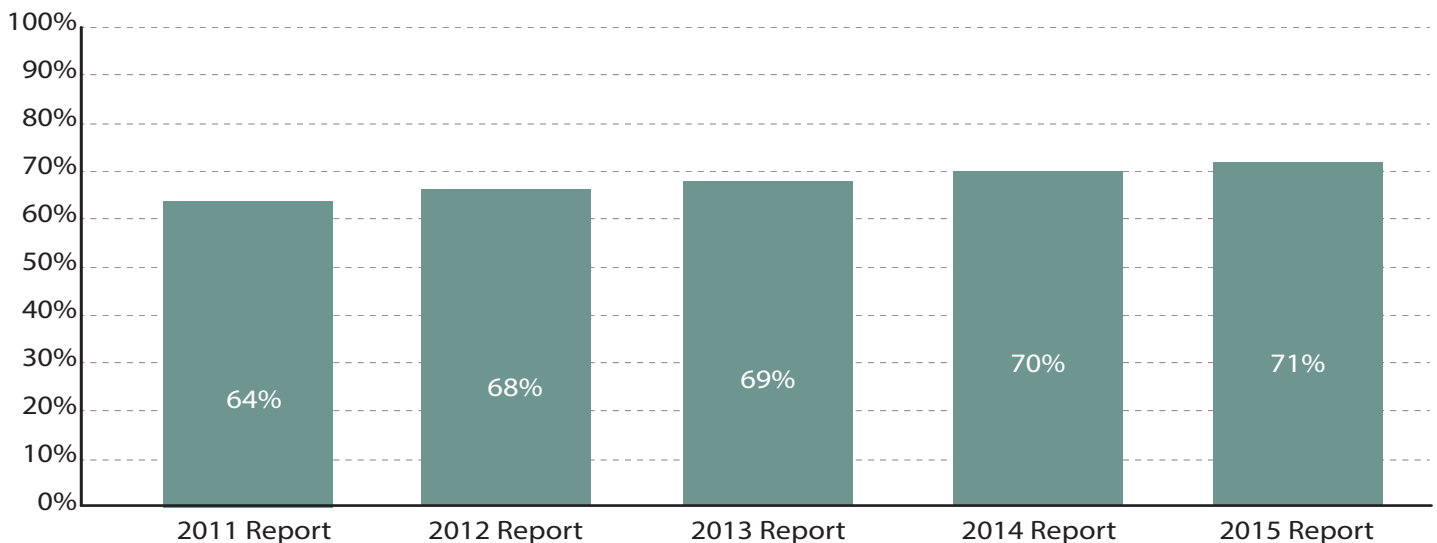

The statewide rate for Colorectal Cancer Screening is 71 percent. **Table 19** displays the details of this statewide rate. **Figure 5** displays the statewide rate over time. The statewide rate has been increasing since the 2011 report and increased by one percentage point from 2014.

Data collected for this measure are submitted directly to MNCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 19: STATEWIDE RATE FOR COLORECTAL CANCER SCREENING

	Statewide Average (Weighted)	95% CI	Numerator (Patients who were screened)	Denominator (Patients submitted)	Total Eligible
Colorectal Cancer Screening	71.4%	71.3%-71.5%	825,232	1,152,991	1,187,400

FIGURE 5: STATEWIDE RATES FOR COLORECTAL CANCER SCREENING OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR COLORECTAL CANCER SCREENING

Clinic Results

Highest performers in 2015

Clinic results showed an average of 71 percent of patients ages 51-75 had appropriate screening for colorectal cancer. **Obstetrics, Gynecology and Infertility – Edina** set the benchmark of 92 percent. There were 215 of 682 clinics with rates and confidence intervals fully above the statewide average. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure.

PERFORMANCE HIGHLIGHTS FOR COLORECTAL CANCER SCREENING

Clinic Results

Highest performers in 2015 by region

Clinic results showed differences in performance among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below based on their proportion of high-performing clinics from high to low. The number of high-performing clinics is shown along with the total number of clinic sites that submitted data for this measure. The high-performing clinics are listed in alphabetical order under their medical group name by region.

PERFORMANCE HIGHLIGHTS FOR COLORECTAL CANCER SCREENING

Medical Group Results

Highest performers in 2015

Results by medical group showed an average of 71 percent of patients ages 51-75 had appropriate screening for colorectal cancer. **Southdale Ob/Gyn Consultants** set the benchmark of 89 percent. There were 27 of 133 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Southdale Ob/Gyn Consultants*
- Catalyst Medical Clinic
- Partners Ob/Gyn*
- Clinic Sofia Ob/Gyn*
- Obstetrics and Gynecology Associates*
- Western ObGyn*
- Edina Sports Health & Wellness
- John A. Haugen Associates, PA
- Edina Family Physicians, P.A.
- Oakdale Ob/Gyn
- Stillwater Medical Group
- Allina Health Specialties

- Gundersen Health System
- Sanford Health - Fargo Region
- Park Nicollet Health Services

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Colorectal Cancer Screening (medical group results) was made by **Prairie Ridge Hospital & Health Services**, whose score increased by more than 35 percentage points.

PERFORMANCE HIGHLIGHTS FOR COLORECTAL CANCER SCREENING

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Twenty medical groups achieved consistently high performance and above average rates over the past three years for Colorectal Cancer Screening:

- Affiliated Community Medical Centers
- Alexandria Clinic
- Allina Health Clinics
- Allina Health Specialties
- Burnsville Family Physicians
- Catalyst Medical Clinic
- CentraCare Health
- Edina Sports Health & Wellness
- Fairview Health Services
- Family Practice Medical Center of Willmar
- HealthPartners Central Minnesota Clinics
- HealthPartners Clinics
- Mankato Clinic, Ltd.
- Mayo Clinic
- Mayo Clinic Health System
- Oakdale Ob/Gyn
- Park Nicollet Health Services
- Partners Ob/Gyn
- Sanford Health - Fargo Region
- Stillwater Medical Group

Nineteen medical groups showed consistent improvement over three years:

- Albany Medical Center
- Altru Health System
- Duluth Family Medicine Clinic
- Essentia Health - Fosston
- Essentia Health - Graceville
- Essentia Health - West
- FamilyHealth Medical Clinics
- John A. Haugen Associates, PA
- Kittson Memorial Clinic
- Mayo Clinic Health System
- North Memorial
- Prairie Ridge Hospital & Health Services
- Ridgeview Clinics
- Southdale Ob/Gyn Consultants
- Southside Community Health Services
- United Family Medicine
- University of Minnesota Physicians
- West Side Community Health Services
- Western ObGyn

Three medical groups showed consistent decreases over three years:

- Adefris & Toppin Women's Specialists
- HealthEast Clinics
- Murray County Clinic

Sixteen medical groups had rates that were relatively stable over three years:

- Affiliated Community Medical Centers
- Cedar Riverside People's Center
- Entira Family Clinics
- Fairview Health Services
- Family Practice Medical Center of Willmar
- HealthPartners Central Minnesota Clinics
- HealthPartners Clinics
- Integrity Health Network
- Lake Region Healthcare
- Lakewood Health Center Clinic
- Meeker Memorial Clinic
- Park Nicollet Health Services
- Planned Parenthood Minnesota, North Dakota, South Dakota
- Sanford Health - Fargo Region
- Sibley Medical Center DBA Ridgeview Sibley Medical Center
- St. Luke's Clinics

Eighty medical groups did not have a discernable pattern over three years.

Please see next page.

SMALL INCREASE IN STATEWIDE RATE

Chlamydia Screening in Women

This measures the percentage of sexually active women ages 16-24 who had at least one test for chlamydia during the measurement year.

The statewide rate for Chlamydia Screening is 49 percent. **Table 20** displays the details of the 2015 rate. **Figure 6** displays the statewide rates over time. The rate increased by one percentage point from 2014 to 2015.

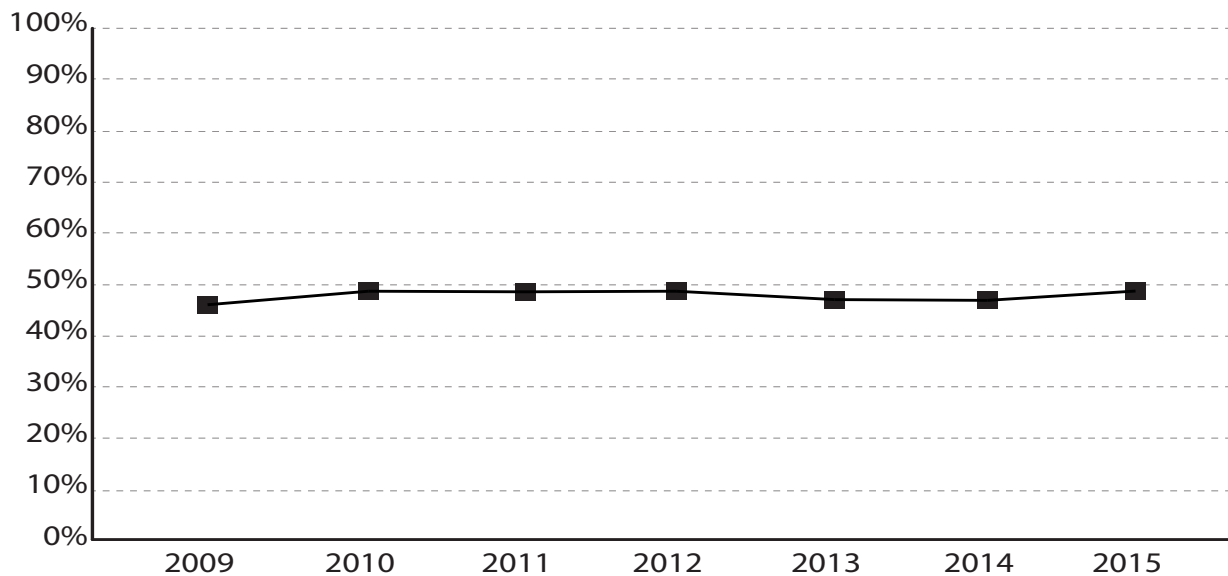

The data for this measure are collected from health plan claims.

TABLE 20: STATEWIDE RATE FOR CHLAMYDIA SCREENING IN WOMEN

	Statewide Average	95% CI	Numerator (Patients who were screened)	Denominator
Chlamydia Screening	48.9%	48.6%-49.2%	38,952	79,667

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 6: STATEWIDE RATES FOR CHLAMYDIA SCREENING IN WOMEN OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR CHLAMYDIA SCREENING IN WOMEN

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 51 percent of sexually active women ages 16-24 had a chlamydia test. **Face to Face Health and Counseling** set the benchmark of 92 percent. Twenty-two of 143 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Face to Face Health & Counseling Service, Inc.*
- NorthPoint Health & Wellness Center*
- Adefris & Toppin Women's Specialists*
- Planned Parenthood Minnesota, North Dakota, South Dakota*
- Neighborhood Healthsource*
- Paul Larson Ob/Gyn Clinic

- Mayo Clinic Health System - Franciscan Healthcare in La Crosse
- United Family Medicine
- Entira Family Clinics
- Stillwater Medical Group
- Fairview Medical Group
- HealthEast Clinics
- University of Minnesota Physicians
- Park Nicollet Health Services

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Chlamydia Screening in Women (medical group results) was made by **Scandia Clinic**, whose score increased by more than 30 percentage points.

PERFORMANCE HIGHLIGHTS FOR CHLAMYDIA SCREENING IN WOMEN

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in clinics with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Thirteen medical groups achieved consistently high performance and above average rates over the past three years for Chlamydia Screening in Women:

- Allina Health Specialties
- Entira Family Clinics
- Face to Face Health & Counseling Service, Inc.
- Fairview Medical Group
- HealthEast Clinics
- HealthPartners Clinics
- Hennepin County Medical Center (HCMC) Clinics
- Neighborhood Healthsource
- NorthPoint Health & Wellness Center
- Planned Parenthood Minnesota, North Dakota, South Dakota
- United Family Medicine
- University of Minnesota Physicians
- West Side Community Health Services

Nine medical groups showed consistent improvement over three years:

- Adefris & Toppin Women's Specialists
- Apple Valley Medical Clinic
- Cuyuna Regional Medical Center
- Essentia Health - Fosston
- Mayo Clinic Health System - New Prague
- Mayo Clinic Health System - St. James
- Paul Larson Ob/Gyn Clinic
- Scenic Rivers Health Services
- Southdale Pediatric Associates, Ltd

Eight medical groups showed consistent decreases over three years:

- Buffalo Clinic, PA - IHN
- Glencoe Regional Health Services
- Glenwood Medical Center
- Mayo Clinic Health System - Albert Lea and Austin
- Mayo Clinic Health System - Lake City
- Mille Lacs Health System
- Riverwood Healthcare Center
- Williams Integracare Clinic

Ten medical groups had rates that were relatively stable over three years:

- Avera Medical Group- McGreevy Clinic, United Medical Center, Worthington Specialty Clinic
- CentraCare Health
- Children's Clinic Network
- Chippewa County Montevideo Hospital & Medical Clinic
- Essentia Health - East Region
- Gateway Family Health Clinic
- Lakeview Clinic
- Mankato Clinic, Ltd.
- Ridgeview Clinics
- St. Cloud Medical Group NW, So., Cold Spring, Clear Water - IHN

Eighty-three medical groups did not have a discernable pattern over three years.

Please see next page.

SMALL INCREASE IN STATEWIDE RATE

Appropriate Testing for Children with Pharyngitis

This measures the percentage of children ages 2-18 with pharyngitis (sore throat) who were given an antibiotic and a group A streptococcus (strep) test rather than just an antibiotic for the episode period (July 1 of prior year to June 30 of measurement year). Since pharyngitis may be caused by a virus, best practice is to test for strep when ordering an antibiotic. A higher rate represents better performance (i.e., appropriate testing).

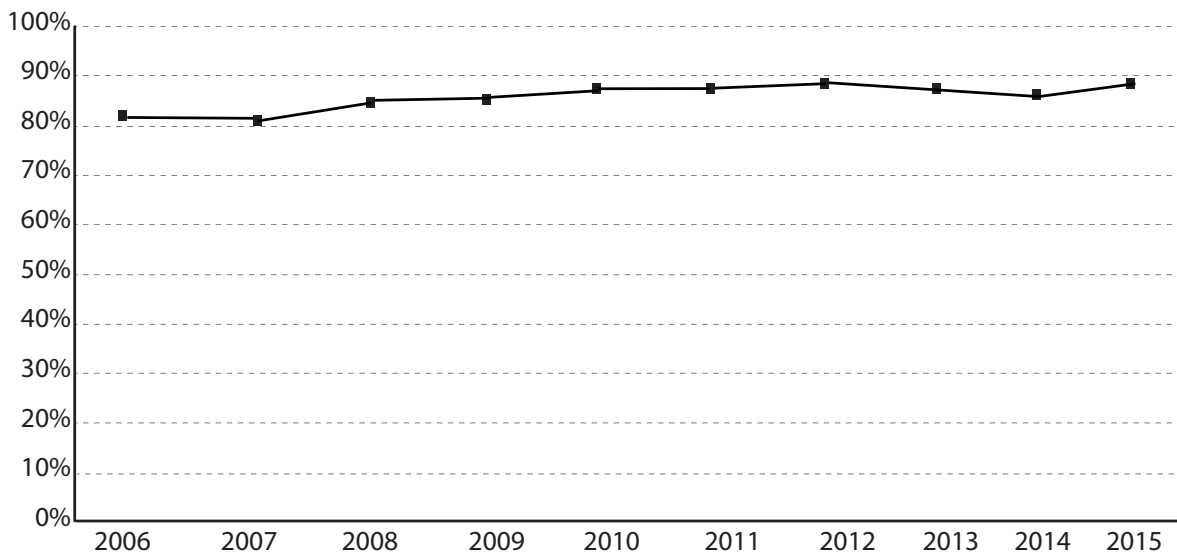

The statewide rate for Appropriate Testing for Children with Pharyngitis is 89 percent. **Table 21** displays the details of the 2015 rate. **Figure 7** shows the Appropriate Testing for Children with Pharyngitis over time. Since the 2006 report, the rate has increased, but it has been relatively stable since 2010. The statewide rate increased one percentage point from 2014 to 2015.

Data collected for this measure are from health plan claims.

TABLE 21: STATEWIDE RATE FOR APPROPRIATE TESTING FOR CHILDREN WITH PHARYNGITIS

	Statewide Average	95% CI	Numerator (Patients who recieved an antibiotic and Group A test)	Denominator
Appropriate Testing for Children with Pharyngitis	89.2%	88.9%-89.6%	27,332	30,636

FIGURE 7: STATEWIDE RATES FOR APPROPRIATE TESTING FOR CHILDREN WITH PHARYNGITIS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR APPROPRIATE TESTING FOR CHILDREN WITH PHARYNGITIS

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 89 percent of children ages 2-18 who were diagnosed with pharyngitis were appropriately dispensed an antibiotic and received a strep test. **North Clinic, Scandia Clinic, Physicians Urgent Care** and **Fairview Express Care** set the benchmark of 100 percent. Thirty-two of 107 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance from the top of the left column to the bottom of the right column. An asterisk (*) indicates a Top 5 performer for this measure.

- Scandia Clinic*
- Physicians Urgent Care*
- Pediatric and Adolescent Services*
- MinuteClinic*
- Central Pediatrics*
- Wayzata Children’s Clinic
- Eagan Valley Pediatrics
- Express Healthcare
- All About Children Pediatrics - Children’s Health Network

- Hudson Physicians - Minnesota Healthcare Network
- Park Nicollet Health Services
- Suburban Emergency Associates
- St. Cloud Medical Group NW, So., Cold Spring, Clear Water - IHN
- Grand Itasca Clinic
- FamilyHealth Medical Clinics
- Children’s Clinic Network
- Stillwater Medical Group
- Mankato Clinic, Ltd.
- Southdale Pediatric Associates, Ltd
- Ridgeview Clinics
- Multicare Associates
- Buffalo Clinic, PA - IHN
- Fairview Medical Group
- Apple Valley Medical Clinic
- Allina Health Specialties

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Appropriate Testing for Children with Pharyngitis (medical group results) was made by **North Valley Health Center**, which had a 29 percentage point increase.

PERFORMANCE HIGHLIGHTS FOR APPROPRIATE TESTING FOR CHILDREN WITH PHARYNGITIS

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in clinics with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Twenty-one medical groups achieved consistently high performance and above average rates over the past three years for Appropriate Testing for Children with Pharyngitis:

- Allina Health Specialties
- Central Pediatrics
- Children's Clinic Network
- Children's Health Care
- Eagan Valley Pediatrics
- Express Healthcare
- Fairview Medical Group
- Fridley Children's & Teenagers' Medical Center - Children's Physician Network
- HealthPartners Clinics
- MinuteClinic
- Multicare Associates
- Park Nicollet Health Services
- Pediatric & Young Adult Medicine
- Pediatric and Adolescent Services
- Priority Pediatrics Urgent Care
- Ridgeview Clinics
- South Lake Pediatrics
- Southdale Pediatric Associates, Ltd
- St. Cloud Medical Group NW, So., Cold Spring, Clear Water - IHN
- Target Clinic
- Wayzata Children's Clinic

Six medical groups showed consistent improvement over three years:

- Avera Medical Group- McGreevy Clinic, United Medical Center, Worthington Specialty Clinic
- Grand Itasca Clinic
- Mayo Clinic
- North Valley Health Center
- Riverwood Healthcare Center
- St. Croix Regional Medical Center

Six medical groups showed consistent decreases over three years:

- Emergency Physicians, P.A.
- Mayo Clinic Health System - Fairmont
- Mayo Clinic Health System - Waseca
- North Memorial
- Sanford Health - Fargo Region
- Stevens Community Medical Center

Twenty medical groups had rates that were relatively stable over three years:

- Allina Health Specialties
- Central Pediatrics
- Children's Clinic Network
- Children's Health Care
- Express Healthcare
- FirstLight Health System
- Fridley Children's & Teenagers' Medical Center - Children's Physician Network
- HealthPartners Clinics
- MinuteClinic
- Northwest Family Physicians
- Park Nicollet Health Services
- Pediatric & Young Adult Medicine
- Pediatric and Adolescent Services
- Pediatric Services - Children's Physician Network
- Ridgeview Clinics
- South Lake Pediatrics
- Southdale Pediatric Associates, Ltd
- St. Cloud Medical Group NW, So., Cold Spring, Clear Water - IHN
- Target Clinic
- Wayzata Children's Clinic

Fifty-six medical groups did not have a discernable pattern over three years.

Please see next page.

SMALL INCREASE IN STATEWIDE RATE

Appropriate Treatment for Children with Upper Respiratory Infection (URI)

This measures the percentage of children ages three months to 18 years of age with a diagnosis of upper respiratory infection (URI) who were not given an antibiotic prescription within three days of the episode period (July 1 of prior year to June 30 of measurement year).

Appropriate treatment is to not provide an antibiotic, since most URIs are caused by a virus. A higher rate indicates appropriate treatment (i.e., the proportion for whom antibiotics were not prescribed).

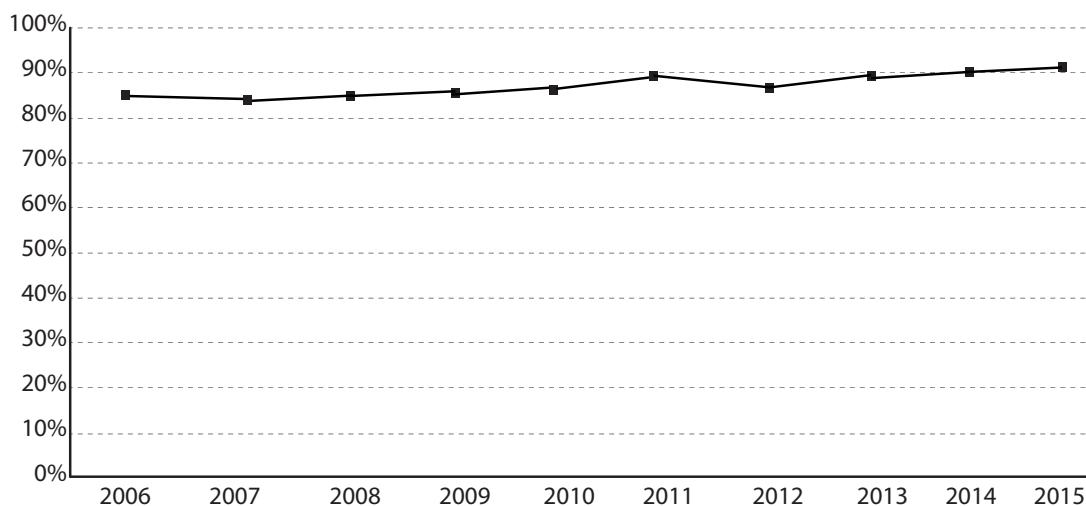

The statewide rate for Appropriate Treatment for Children with URI is 91 percent. **Table 22** displays the details of the 2014 rate. **Figure 8** shows the Appropriate Treatment for Children with URI over time. The statewide rate has been increasing by one percentage point each year since 2012.

Data collected for this measure are from health plan claims.

TABLE 22: STATEWIDE RATE FOR APPROPRIATE TREATMENT FOR CHILDREN WITH URI

	Statewide Average	95% CI	Numerator (Patients who were screened)	Denominator
Appropriate Treatment for Children with URI	90.6%	90.2%-90.9%	29,446	32,519

FIGURE 8: STATEWIDE RATES FOR APPROPRIATE TREATMENT FOR CHILDREN WITH URI OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR APPROPRIATE TREATMENT FOR CHILDREN WITH URI

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 91 percent of children ages three months to 18 years, with a diagnosis of URI, were appropriately managed without antibiotics. **Cedar Riverside People's Center, Gateway Family Health Clinic, Pediatric and Adolescent Services** and **Community University Health Care Center** set the benchmark of 100 percent. There were 34 of 111 medical groups with rates and confidence intervals fully above the medical group average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Cedar Riverside People's Center*
- Gateway Family Health Clinic*
- Pediatric and Adolescent Services*
- Community University Health Care Center*
- South Lake Pediatrics*
- Wayzata Children's Clinic
- Fridley Children's & Teenagers' Medical Center - Children's Physician Network
- Buffalo Clinic, PA – IHN
- Hennepin County Medical Center (HCMC) Clinics
- Neighborhood Healthsource
- Express Healthcare
- All About Children Pediatrics - Children's Health Network
- University of Minnesota Physicians
- NorthPoint Health & Wellness Center
- United Family Medicine
- Pediatric Services - Children's Physician Network
- MinuteClinic
- HealthEast Clinics
- Children's Clinic Network
- FirstLight Health System
- Emergency Physicians, P.A.
- Southdale Pediatric Associates, Ltd
- HealthPartners Clinics
- Children's Health Care
- Mayo Clinic
- West Side Community Health Services
- Allina Health Specialties
- Park Nicollet Health Services
- Pediatric & Young Adult Medicine
- Stillwater Medical Group
- Winona Health Services
- Essentia Health - East Region
- Fairview Medical Group
- North Memorial

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Appropriate Treatment for Children with URI (medical group results) was made by **Alexandria Clinic**, whose score increased by more than 19 percentage points.

PERFORMANCE HIGHLIGHTS FOR APPROPRIATE TREATMENT FOR CHILDREN WITH URI

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistent high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Twenty-two medical groups achieved consistently high performance and above average rates over the past three years for Appropriate Treatment for Children with URI:

- All About Children Pediatrics - Children's Health Network
- Allina Health Specialties
- Buffalo Clinic, PA - IHN
- Children's Clinic Network
- Children's Health Care
- Essentia Health - East Region
- Fairview Medical Group
- FirstLight Health System
- Fridley Children's & Teenagers' Medical Center - Children's Physician Network
- HealthEast Clinics
- HealthPartners Clinics
- Hennepin County Medical Center (HCMC) Clinics
- MinuteClinic
- North Memorial
- NorthPoint Health & Wellness Center
- Park Nicollet Health Services
- Pediatric Services - Children's Physician Network
- South Lake Pediatrics
- Southdale Pediatric Associates, Ltd
- University of Minnesota Physicians
- Wayzata Children's Clinic
- West Side Community Health Services

Ten medical groups showed consistent improvement over three years:

- Essentia Health - St. Mary's
- Essentia Health - West
- Fairview Mesaba Clinics
- Mankato Clinic, Ltd.
- Mayo Clinic Health System - Lake City
- Pediatric Services - Children's Physician Network
- Ridgeview Clinics
- Riverwood Healthcare Center
- Sanford Health - Sioux Falls Region
- Stevens Community Medical Center

Three medical groups showed consistent decreases over three years:

- Apple Valley Medical Clinic
- Avera Medical Group - Pipestone
- Essentia Health - Fosston

Twenty medical groups had rates that were relatively stable over three years:

- Affiliated Community Medical Centers
- Allina Health Specialties
- Avera Medical Group- McGreevy Clinic, United Medical Center, Worthington Speciality Clinic
- Children's Clinic Network
- Essentia Health - East Region
- Fairview Medical Group
- FamilyHealth Medical Clinics
- FirstLight Health System
- Fridley Children's & Teenagers' Medical Center - Children's Physician Network
- HealthPartners Clinics
- Hennepin County Medical Center (HCMC) Clinics
- Mayo Clinic Health System-Owatonna
- MinuteClinic
- Neighborhood Healthsource
- Sleepy Eye Medical Center
- South Lake Pediatrics
- Southdale Pediatric Associates, Ltd
- St. Croix Regional Medical Center
- St. Luke's Clinics
- Wayzata Children's Clinic

Sixty-five medical groups did not have a discernable pattern over three years.

Please see next page.

SMALL INCREASE IN STATEWIDE RATE

Depression Remission and Response at Six Months

Depression **Remission** at Six Months is defined as the percentage of patients with major depression or dysthymia and an initial PHQ-9 score greater than nine whose six month PHQ-9 score was less than five. The statewide rate for Depression **Remission** at Six Months is eight percent. **Table 23** displays the details of the statewide rate. **Figure 9** displays the statewide rates over time for Depression **Remission** at Six Months. This rate has increased by three percentage points from 2009 to 2015.

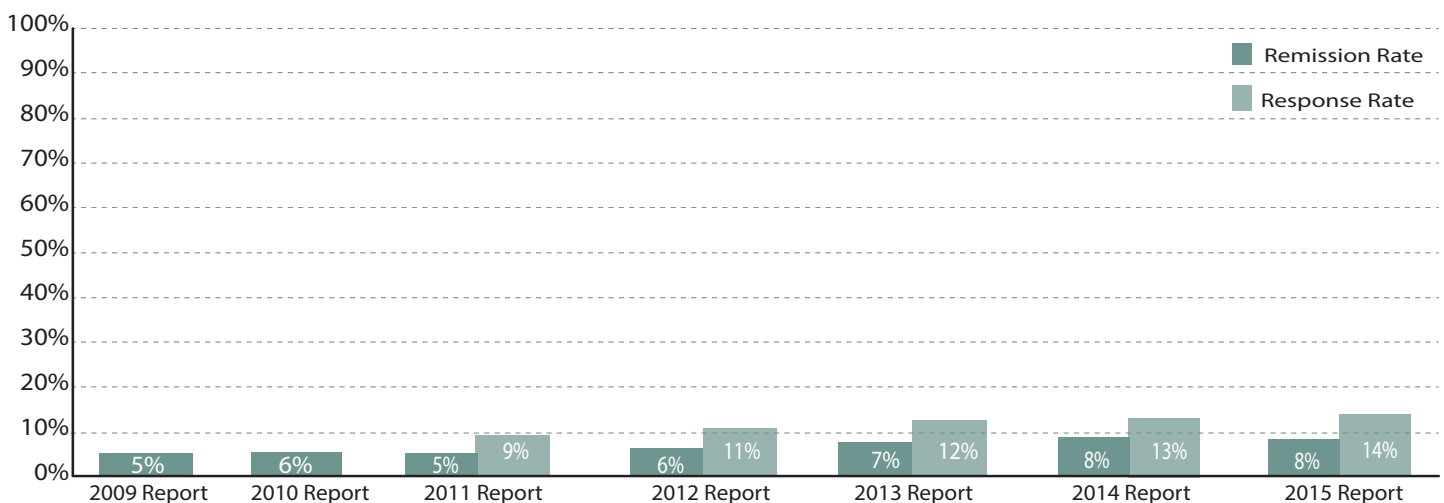

Depression **Response** at Six Months is defined as the percentage of patients whose PHQ-9 score at six months decreased by at least 50 percent from their initial PHQ-9 score. The statewide rate for Depression **Response** at Six Months is 13 percent. **Table 23** displays the details of the statewide rate. **Figure 9** displays the statewide rates over time for Depression **Response** at Six Months. Since the 2011 report, this rate has increased by one percentage point each year.

Data collected for this measure are submitted directly to MNMCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 18: STATEWIDE RATE FOR DEPRESSION REMISSION AND RESPONSE AT SIX MONTHS

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Depression Remission at Six Months	8.3%	8.1%-8.5%	8,178	98,786
Depression Response at Six Months	13.9%	13.7%-14.2%	13,771	98,786

FIGURE 8: STATEWIDE RATES FOR DEPRESSION REMISSION AND RESPONSE AT SIX MONTHS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT SIX MONTHS

Clinic Results

Highest performers in 2015

Clinic results showed that average of eight percent of patients with depression were in remission at six months (had a PHQ-9 score of less than five). **Entira Family Clinics - West St. Paul** set the benchmark of 32 percent. There were 93 of 483 clinics with rates and confidence intervals fully above the statewide average. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure.

Allina Health Clinics

- Allina Health - Annandale*
- Allina Health - Bandana Square (Aspen)
- Allina Health - Blaine
- Allina Health - Buffalo

- Sanford Jackson Clinic

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Depression Remission at Six Months (clinic results) was made by **Fairview Andover Clinic**, which had a 18 percentage point increase.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT SIX MONTHS

Clinic Results

Clinic performance over time (2013-2015)

We reviewed the data to identify patterns of clinic performance in clinics with three years of data beginning in 2012. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order under their medical group name.

Thirty-three clinics achieved consistently high performance and above average rates over the past three years for Depression Remission at Six Months:

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT SIX MONTHS

Regional Clinic Results

Highest performers in 2015 by region

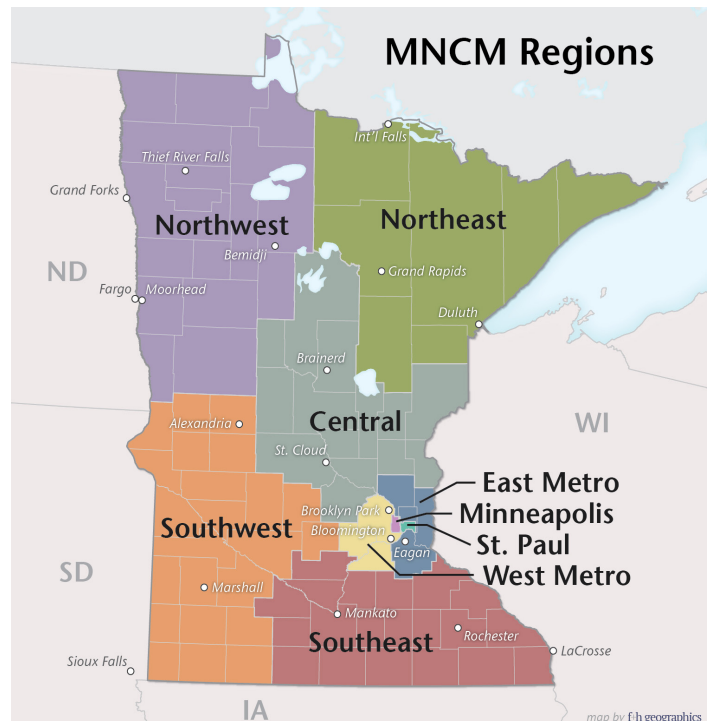

Clinic results showed differences in performance among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below based on their proportion of high-performing clinics from high to low. The number of high-performing clinics is shown along with the total number of clinic sites that submitted data for this measure. The high-performing clinics are listed under their medical group name in alphabetical order by region.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT SIX MONTHS

Medical Group Results

Highest performers in 2015

Medical group results by medical group showed an average of eight percent of patients with depression were in remission at six months (had a PHQ-9 score of less than five). **Entira Family Clinics** set the benchmark of 19 percent. There were ten of 112 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Entira Family Clinics*
- Essentia Health - St. Mary's*
- Park Nicollet Health Services*
- Allina Health Clinics*
- Essentia Health - East Region*
- Essentia Health - West
- Mayo Clinic
- Olmsted Medical Center
- Allina Health Specialties
- Fairview Health Services

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Depression Remission at Six Months (medical group results) was made by **Essentia Health - Fosston**, whose score increased by more than eight percentage points.

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistent high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Four medical groups achieved consistently high performance and above average rates over the past three years for Depression Remission at Six Months:

- Allina Health Clinics
- Entira Family Clinics
- Essentia Health - East Region
- Mayo Clinic

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT SIX MONTHS

Medical Group Results

One medical groups showed consistent improvement over three years:

- Essentia Health - St. Mary's

There were no medical groups that showed consistent decreases over three years.

Thirty-nine medical groups had rates that were relatively stable over three years:

- Affiliated Community Medical Centers
- Altru Health System
- Apple Valley Medical Clinic
- BHSI
- Boynton Health Service
- Burnsville Family Physicians
- CentraCare Health
- Entira Family Clinics

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Depression Remission at Six Months (clinic results) was made by **Fairview Andover Clinic**, which had more than 24 percentage point increase.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION RESPONSE AT SIX MONTHS

Clinic Results

Clinic performance over time (2013-2015)

We reviewed the data to identify patterns of clinic performance in clinics with three years of data beginning in 2012. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order under their medical group name.

Forty-four clinics achieved consistently high performance and above average rates over the past three years for Depression Response at Six Months:

PERFORMANCE HIGHLIGHTS FOR DEPRESSION RESPONSE AT SIX MONTHS

Regional Clinic Results

Highest performers in 2015 by region

Clinic results showed differences in performance among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below based on their proportion of high-performing clinics from high to low. The number of high-performing clinics is shown along with the total number of clinic sites that submitted data for this measure. The high-performing clinics are listed under their medical group name in alphabetical order by region.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION RESPONSE AT SIX MONTHS

Medical Group Results

Highest performers in 2015

Medical group results by medical group showed an average of eight percent of patients with depression were in remission at six months (had a PHQ-9 score of less than five). **Entira Family Clinics** set the benchmark of 27 percent. There were nine of 112 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Entira Family Clinics*
- Essentia Health - St. Mary's*
- Allina Health Clinics*
- Park Nicollet Health Services*
- Essentia Health - East Region*
- Essentia Health - Fosston
- Essentia Health - West
- Allina Health Specialties
- Fairview Health Services

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Depression Response at Six Months (medical group results) was made by **Sibley Medical Center DBA Ridgeway Sibley Medical Center**, whose score increased by more than 13 percentage points.

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistent high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Three medical groups achieved consistently high performance and above average rates over the past three years for Depression Response at Six Months:

- Allina Health Clinics
- Entira Family Clinics
- Essentia Health - East Region

PERFORMANCE HIGHLIGHTS FOR DEPRESSION RESPONSE AT SIX MONTHS

Medical Group Results

Four medical groups showed consistent improvement over three years:

- AALFA Family Clinic
- Essentia Health - Fosston
- Essentia Health - West
- Native American Community Clinic

Two medical groups showed consistent decreases over three years:

- Carver County Mental Health Program
- Glencoe Regional Health Services

Twenty-nine medical groups had rates that were relatively stable over three years:

- Affiliated Community Medical Centers
- Altru Health System
- Apple Valley Medical Clinic
- CentraCare Health
- FamilyHealth Medical Clinics
- HealthPartners Central Minnesota Clinics
- Hennepin County Medical Center (HCMC) Clinics
- Integrity Health Network
- Lakeland Mental Health Center

- Western Mental Health Center, Inc.
- Winona Health Services
- Zumbro Valley Health Center

Fifty-three medical groups did not have a discernable pattern over three years.

Please see next page.

SMALL INCREASE IN STATEWIDE RATE

Depression Remission and Response at 12 Months

Depression **Remission** at 12 Months is defined as the percentage of patients with major depression or dysthymia and an initial PHQ-9 score greater than nine whose 12 month PHQ-9 score was less than five. The statewide rate for Depression **Remission** at 12 Months is six percent. **Table 24** displays the details of the statewide rate. **Figure 10** displays the statewide rates over time for Depression **Remission** at 12 Months. This rate has remained relatively stable over the years.

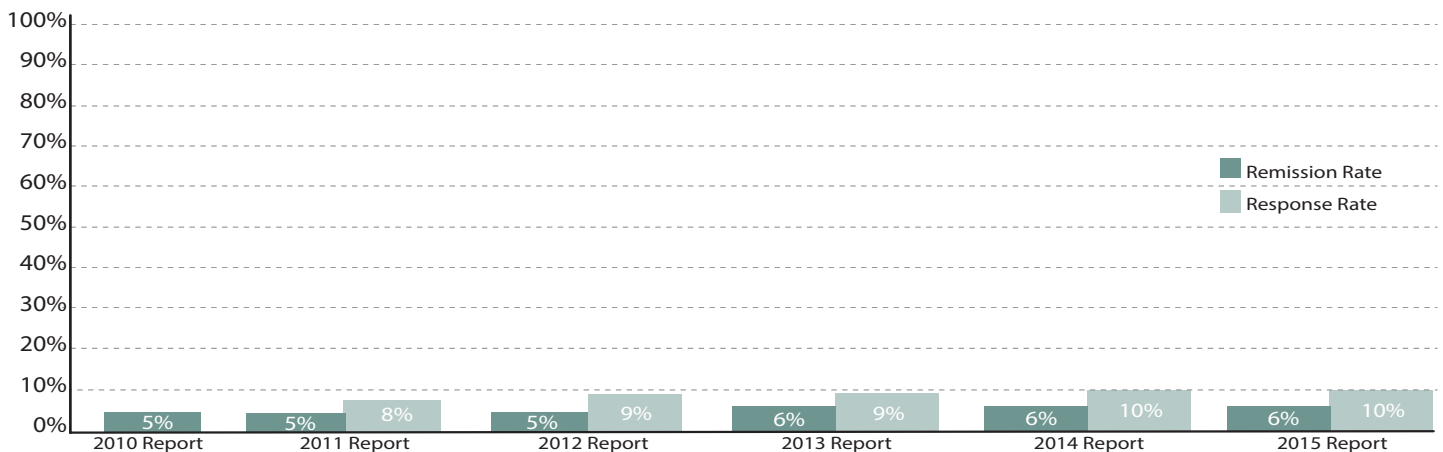

Depression **Response** at 12 Months is defined as the percentage of patients whose PHQ-9 score at 12 months decreased by at least 50 percent from their initial PHQ-9 score. The statewide rate for Depression **Response** at 12 Months is 10 percent. **Table 24** displays the details of the statewide rate. **Figure 10** displays the statewide rates over time for Depression **Response** at 12 Months. This rate has remained relatively stable over the years.

Data collected for this measure are submitted directly to MNCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 24: STATEWIDE RATE FOR DEPRESSION REMISSION, RESPONSE, AND PHQ-9 FOLLOW-UP AT 12 MONTHS

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Depression Remission at 12 Months	6.3%	6.2% - 6.5%	5,887	92,738
Depression Response at 12 Months	10.5%	10.3% - 10.7%	9,736	92,738

FIGURE 10: STATEWIDE RATES FOR DEPRESSION REMISSION, RESPONSE, AND PHQ-9 FOLLOW-UP AT 12 MONTHS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT 12 MONTHS

Regional Clinic Results

Highest performers in 2015 by region

Clinic results showed differences in performance among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below based on their proportion of high-performing clinics from high to low. The number of high-performing clinics is shown along with the total number of clinic sites that submitted data for this measure. The high-performing clinics are listed under their medical group name in alphabetical order by region.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT 12 MONTHS

Medical Group Results

Highest performers in 2015

Medical group results by medical group showed an average of eight percent of patients with depression were in remission at six months (had a PHQ-9 score of less than five). **Essentia Health - East Region** set the benchmark of 14 percent. There were ten of 105 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Essentia Health - East Region*
- Allina Health Clinics*
- Essentia Health - Fosston*
- Essentia Health - Central Region*
- Essentia Health - West*
- Olmsted Medical Center
- Mayo Clinic
- Essentia Health - St. Mary's
- Allina Health Specialties
- Mankato Clinic, Ltd.

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Depression Response at 12 Months (medical group results) was made by **Essentia Health - Fosston**, whose score increased by more than 12 percentage points.

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistent high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Five medical groups achieved consistently high performance and above average rates over the past three years for Depression Remission at 12 Months:

- Allina Health Clinics
- Essentia Health - East Region
- Mankato Clinic, Ltd.
- Mayo Clinic
- Olmsted Medical Center

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT 12 MONTHS

Medical Group Results

Four medical groups showed consistent improvement over three years:

- Catalyst Medical Clinic
- Essentia Health - Central Region
- Sanford Health - Sioux Falls Region
- Sibley Medical Center DBA Ridgeway Sibley Medical Center

There were no medical groups that showed consistent decreases over three years.

Thirty-eight medical groups had rates that were relatively stable over three years:

- Altru Health System
- Associated Clinic of Psychology
- Boynton Health Service
- Caritas Mental Health Clinic
- CentraCare Health
- Entira Family Clinics
- Family Practice Medical Center of Willmar
- Grand Itasca Clinic
- HealthEast Clinics
- HealthPartners Central Minnesota Clinics
- HealthPartners Clinics
- Hennepin County Medical Center (HCMC) Clinics
- Hutchinson Health
- Integrity Health Network
- Lake Superior Community Health Center
- Lakeland Mental Health Center
- Lakewood Health System
- Mankato Clinic, Ltd.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION RESPONSE AT 12 MONTHS

Medical Group Results

Ten medical groups showed consistent improvement over three years:

- Apple Valley Medical Clinic
- Burnsville Family Physicians
- Catalyst Medical Clinic
- Chippewa County Montevideo Hospital & Medical Clinic
- Essentia Health - Central Region
- Essentia Health - Fosston
- Sibley Medical Center DBA Ridgeview Sibley Medical Center
- United Family Medicine
- University of Minnesota Physicians
- Vibrant Health Family Clinics and Minnesota Health Network

Three medical groups showed consistent decreases over three years:

- Glencoe Regional Health Services
- Renville County Hospital and Clinics
- Stevens Community Medical Center

Twenty-three medical groups had rates that were relatively stable over three years:

- Altru Health System
- Associated Clinic of Psychology
- Caritas Mental Health Clinic
- CentraCare Health
- Entira Family Clinics
- Family Practice Medical Center of Willmar
- HealthEast Clinics
- HealthPartners Clinics
- Hennepin County Medical Center (HCMC) Clinics
- Integrity Health Network
- Lakeland Mental Health Center
- Lakewood Health System
- Mankato Clinic, Ltd.
- Multicare Associates
- North Clinic
- North Memorial
- NorthPoint Health & Wellness Center
- Northwest Family Physicians
- Olmsted Medical Center
- People Incorporated Stark Mental Health Clinic
- Ramsey County Mental Health
- Sanford Health - Fargo Region
- St. Cloud Hospital - Behavioral Health Clinic

Forty-one medical groups did not have a discernable pattern over three years.

Please see next page.

RESULTS BY MEASURE

Small Decrease in Statewide Rate

Section Contents

- **Use of Spirometry Testing in the Assessment and Diagnosis of COPD** – Measures the percentage of patients 40 years of age and older with a new diagnosis or newly active chronic obstructive pulmonary disease (COPD) who received appropriate spirometry testing to confirm the diagnosis.
- **Maternity Care: C-section Rate** – Measures the percentage of live, singleton, vertex position, term newborns who were delivered via cesarean section to nulliparous women (first birth).
- **PHQ-9 Utilization** - Based on the denominator of patients age 18 and older with major depression or dysthymia and initial PHQ-9 score is greater than nine, this measures the percent of patients who had a PHQ-9 during the measurement period
- **Breast Cancer Screening** - Measures the percentage of women ages 50-74 who had a mammogram during the measurement year or prior year.
- **Follow-Up Care for Children Prescribed ADHD Medication** – Measures the percentage of children 6-12 years old with a newly prescribed attention-deficit/hyperactivity disorder (ADHD) medication who had one follow-up visit with a practitioner with prescribing authority within 30 days of the first ADHD medication being dispensed.
- **Childhood Immunization Status (Combo 3)** – Measures the percentage of two-year old children who had four DTaP/DT, three IPV, one MMR, three H influenza type B, three Hepatitis B, one VZV, and four pneumococcal conjugate vaccines within the HEDIS specified time period and by their second birthday.

SMALL DECREASE IN STATEWIDE RATE

Use of Spirometry Testing in the Assessment and Diagnosis of COPD

This measures the percentage of patients age 40 and older with a new diagnosis or newly active chronic obstructive pulmonary disease (COPD) who received appropriate spirometry testing to confirm the diagnosis.

The statewide rate for Use of Spirometry Testing in the Assessment and Diagnosis of COPD is 39 percent. **Table 25** displays the details of the 2015 rate. **Figure 11** shows the average rate for this measure over time. The statewide rate peaked in 2012 at 40 percent and is slowly approaching this peak again.

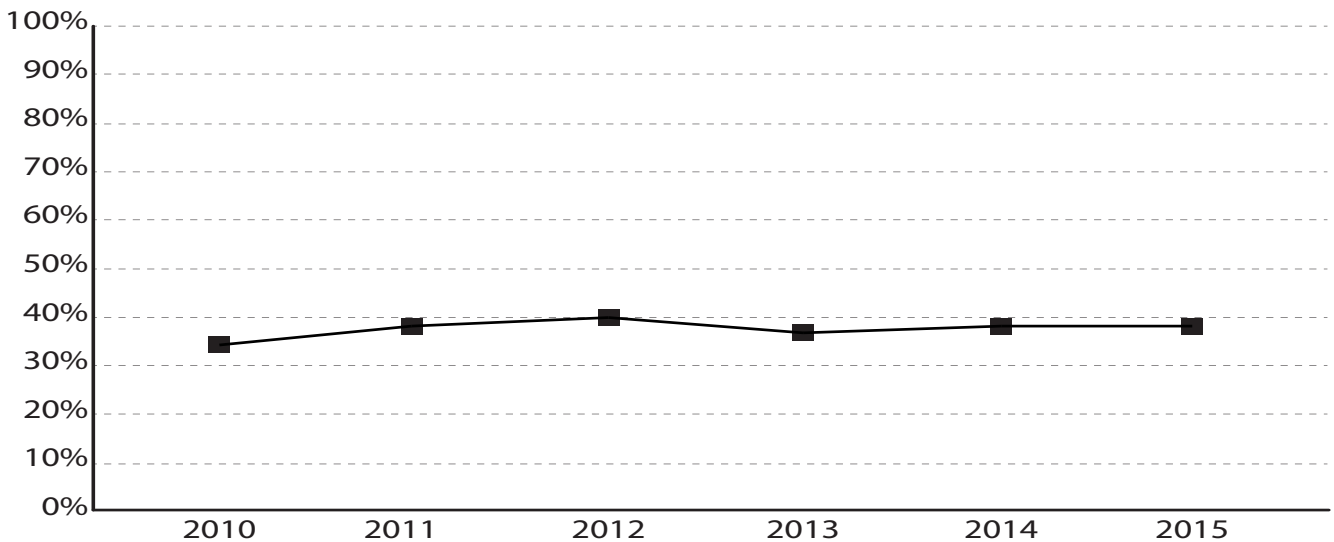

Data collected for this measure are from health plan claims.

TABLE 25: STATEWIDE RATE FOR USE OF SPIROMETRY IN THE ASSESSMENT AND DIAGNOSIS OF COPD*

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Spirometry Testing in the Assessment and Diagnosis of COPD	39.1%	38.2%-40.1%	3,832	9,791

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 11: STATEWIDE RATES FOR USE OF SPIROMETRY TESTING IN THE ASSESSMENT AND DIAGNOSIS OF COPD OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR USE OF SPIROMETRY TESTING IN THE ASSESSMENT & DIAGNOSIS OF COPD

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 41 percent of patients were given a spirometry test for the assessment and diagnosis of COPD. **Ridgeview Clinics** set the benchmark of 60 percent. There were ten of 47 medical groups with rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Ridgeview Clinics*
- Multicare Associates*
- Entira Family Clinics*
- Mayo Clinic Health System-Owatonna*
- Fairview Medical Group*
- Essentia Health - Central Region
- Mayo Clinic
- Park Nicollet Health Services
- HealthPartners Clinics
- North Memorial

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Use of Spirometry Testing in the Assessment and Diagnosis of COPD (medical group results) was made by **Ridgeview Clinics**, whose score increased by 18 percentage points.

PERFORMANCE HIGHLIGHTS FOR USE OF SPIROMETRY TESTING IN THE ASSESSMENT & DIAGNOSIS OF COPD

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Four medical groups achieved consistently high performance and above average rates over the past three years for Use of Spirometry Testing in the Assessment and Diagnosis of COPD:

- Entira Family Clinics
- Fairview Medical Group
- HealthPartners Clinics
- Park Nicollet Health Services

Five medical groups showed consistent improvement over three years:

- Fairview Mesaba Clinics
- Lakeview Clinic
- Mayo Clinic Health System-Owatonna
- Multicare Associates
- Ridgeview Clinics

Five medical groups showed a consistent decrease over three years:

- Altru Health System
- Gateway Family Health Clinic
- Mankato Clinic, Ltd.
- Stillwater Medical Group
- Unity Family Healthcare – Avon

One medical group had rates that were relatively stable over three years:

- Essentia Health - East Region

Twenty-nine medical groups did not have a discernable pattern over three years.

Please see next page.

SMALL DECREASE IN STATEWIDE RATE

Maternity Care: Primary C-section Rate

This measure assesses the percentage of nulliparous women with a term, singleton baby in a vertex position delivered by cesarean section between July 1, 2014 and June 30, 2015 patients who had a C-section delivery. Any clinic that is part of a medical group in which the medical group has providers who perform cesarean deliveries were eligible to report data for this measure.

The statewide rate for Maternity Care: Primary C-Section Rate was 22 percent (a lower rate is better for this measure). **Table 26** displays the details of this statewide rate. **Figure 12** shows the average rate for this measure over time.

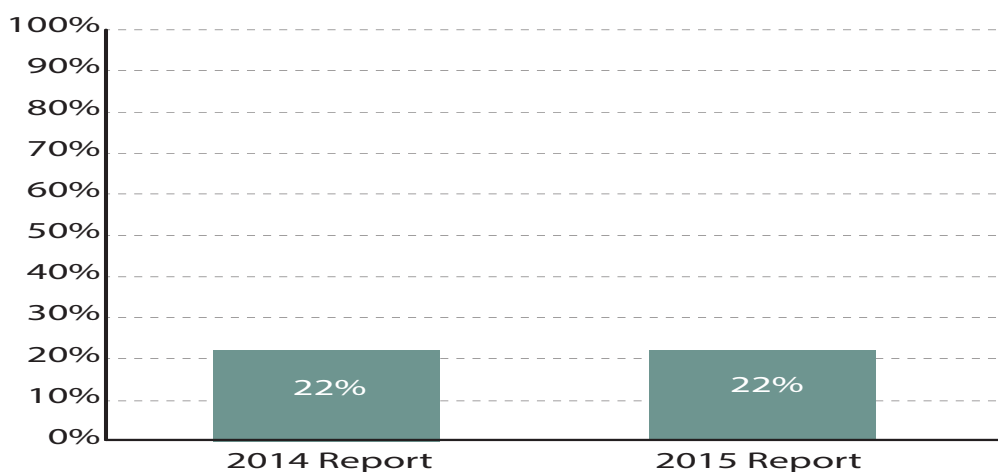

In maternity care, patients often seek care from multiple providers across locations within a medical group. Additionally, there are some providers who provide maternity care but may not perform c-sections, and patients who require a c-section are referred to a physician who does. Previous clinic level reporting of the maternity care measure did not include the deliveries performed by providers at a site without providers who performed c-sections, and as a result, rates for the state and at the medical group level had the potential to be artificially elevated. The maternity care measure is most appropriately calculated and reported at the medical group level in order to account for these considerations.

Data collected for this measure are submitted directly to MNCM by medical groups from electronic health records or paper-based medical charts.

TABLE 26: STATEWIDE RATE FOR MATERNITY CARE: C-SECTION RATE

	Statewide Average	95% CI	Numerator (Patients who had a delivery via C-section)	Denominator (Deliveries)
Maternity Care: Primary C-Section Rate	21.9%	21.4%-22.5%	4,212	19,200

FIGURE 12: STATEWIDE RATES FOR MATERNITY CARE: C-SECTION RATE

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR MATERNITY CARE: PRIMARY C-SECTION RATE

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 22 percent of live, singleton, vertex position, term newborns were delivered via cesarean section to nulliparous women (first birth). **AALFA Family Clinic** set the benchmark of only five percent of women having a cesarean delivery. For this measure, a lower performance rate represents better care. There were nine of 54 medical groups with rates and confidence intervals fully below the statewide average. The high-performing medical groups are listed below in order starting with the best performance. An asterisk (*) indicates a Top 5 performer for this measure.

- AALFA Family Clinic*
- Essentia Health - St. Mary's*
- Olmsted Medical Center*
- Lakewood Health System*
- Hudson Physicians - Minnesota Healthcare Network*
- John A. Haugen Associates, PA
- Oakdale Ob/Gyn
- Essentia Health – West
- Essentia Health - East Region

Biggest improvement from 2014-2015

The greatest improvement since report year 2015 in Maternity Care: Primary C-section Rate (medical group results) was made by **Multicare Associates**, whose score decreased by more than 10 percentage points. A lower rate is better for this measure.

Medical group performance over time (2013-2015)

Not applicable due to this being the second year of this measure.

Please see next page.

SMALL DECREASE IN STATEWIDE RATE

PHQ-9 Utilization

PHQ-9 Utilization is defined as the percentage of the adult population with major depression or dysthymia who had a PHQ-9 during the measurement period. This measure is determining the rate of the use of the PHQ-9 tool for the medical group’s population of patients with major depression or dysthymia.

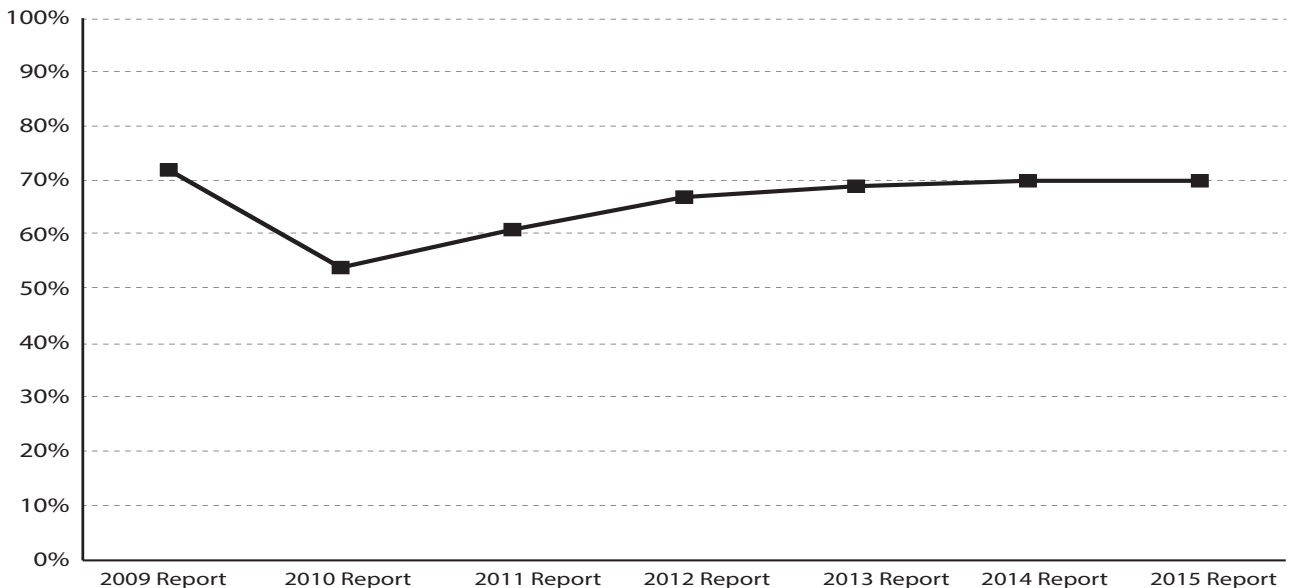

The statewide rate for PHQ-9 Utilization was 70 percent. **Table 27** displays the details of this statewide rate. **Figure 13** shows the PHQ-9 Utilization over time. The statewide rate decreased from 2009 to 2010; however, it has been increasing steadily since 2010. There was no increase in rate from 2014 to 2015.

Data collected for this measure are submitted directly to MNCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 27: STATEWIDE RATE FOR PHQ-9 UTILIZATION

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
PHQ-9 Utilization	69.7%	69.4%-69.9%	105,593	151,570

FIGURE 13: STATEWIDE RATES FOR PHQ-9 UTILIZATION OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 UTILIZATION

Clinic Results

Highest performers in 2015

Clinic results showed an average of 70 percent of adult patients with major depression or dysthymia had a PHQ-9 during the measurement period. There were **12 clinics** that set the benchmark of 100 percent. There were 230 of 548 clinics with rates and confidence intervals fully above the statewide average. The Top 15 Performers (*) are listed below in alphabetical order under their medical group name.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 UTILIZATION

Clinic Results

Biggest improvement from 2014-2015

The greatest improvement since report year 2014 in PHQ-9 Utilization (clinic results) was made by **Associates in Psychiatry & Psychology-Rochester**, whose score increased by more than 89 percentage points.

Clinic performance over time (2013-2015)

We reviewed the data to identify patterns of clinic performance in clinics with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases, and/or relative stability. The results are below in alphabetical order under their medical group name.

One hundred and twenty-eight clinics achieved consistently high performance and above average rates over the past three years for PHQ-9 Utilization:

- AALFA Family Clinic
- Affiliated Community Medical Centers
 - Affiliated Community Medical Centers - Willmar Skylark Center

- Lakeland Mental Health Center
 - Lakeland Mental Health Center - Fergus Falls
- Park Nicollet Health Services
 - Park Nicollet Clinic - St. Louis Park Psychiatry
- Stillwater Medical Group
 - Stillwater Medical Group - Curve Crest Clinic

Two hundred and ninety-five clinics did not have a discernable pattern over three years.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 UTILIZATION

Regional Clinic Results

Highest performers in 2015 by region

Clinic results showed differences in performance among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below based on their proportion of high-performing clinics from high to low. The number of high-performing clinics is shown along with the total number of clinic sites that submitted data for this measure. The high-performing clinics are listed under their medical group name in alphabetical order by region.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 UTILIZATION

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 70 percent of adult patients with major depression or dysthymia who had a PHQ-9 during the measurement period. There were **10 medical groups** who set the benchmark of 100 percent. There were 52 of 121 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance. An asterisk (*) indicates a Top 5 performer for this measure. Since there were 10 medical groups that had a rate of 100 percent, there are more than five top performers for the measure.

- Northern Psychiatric Associates*
- Hamm Clinic*
- Gundersen Health System*
- Associates in Psychiatry & Psychology*
- The Emily Program*
- Ortonville Area Health Services-Northside Medical Clinic*
- Lakewood Health System*
- Hudson Physicians - Minnesota Healthcare Network*

Biggest improvement from 2014-2015

The greatest improvement since report year 2014 in PHQ-9 Utilization (medical group results) was made by **Associates in Psychiatry & Psychology**, whose score increased by more than 88 percentage points.

PERFORMANCE HIGHLIGHTS FOR PHQ-9 UTILIZATION

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2013. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Twenty-four medical groups achieved consistently high performance and above average rates over the past three years for PHQ-9 Utilization:

- AALFA Family Clinic
- Allina Health Clinics
- Allina Health Specialties
- Boynton Health Service
- Duluth Family Medicine Clinic
- Entira Family Clinics
- Essentia Health - Central Region
- Essentia Health - St. Mary's
- Fairview Health Services
- FirstLight Health System
- HealthPartners Central Minnesota Clinics
- Madelia Community Hospital & Clinic
- Mankato Clinic, Ltd.
- Mayo Clinic
- Midwest Center for Personal & Family Development
- Minnesota Mental Health Clinics (Eagan, Edina, Lakeville, Maplewood, Minneapolis, Woodbury)
- Native American Community Clinic
- Olmsted Medical Center
- Park Nicollet Health Services
- South Central Human Relations Center
- St. Cloud Hospital - Behavioral Health Clinic
- Stillwater Medical Group
- Synergy Family Physicians, P.A
- Zumbro Valley Health Center

Eleven medical groups showed consistent improvement over three years:

- Affiliated Community Medical Centers
- Alexandria Clinic
- Catalyst Medical Clinic
- Chippewa County Montevideo Hospital & Medical Clinic
- Duluth Family Medicine Clinic
- Grand Itasca Clinic
- Multicare Associates
- NorthPoint Health & Wellness Center
- Sanford Health - Fargo Region
- St. Cloud Hospital - Behavioral Health Clinic
- Williams Integracare Clinic

Fourteen medical groups showed a consistent decrease over three years:

- Caritas Mental Health Clinic
- Essentia Health - St. Mary's
- HealthEast Clinics
- Mankato Clinic, Ltd.
- Midwest Center for Personal & Family Development
- Neighborhood Healthsource
- Northern Pines Mental Health Center, Inc.
- People Incorporated Stark Mental Health Clinic
- Ramsey County Mental Health
- Renville County Hospital and Clinics
- Sawtooth Mountain Clinic
- Scott County Mental Health Center
- Stevens Community Medical Center
- Western Mental Health Center, Inc.

Five medical groups had rates that were relatively stable over three years:

- Altru Health System
- Community University Health Care Center
- Entira Family Clinics
- Park Nicollet Health Services
- Stillwater Medical Group

Sixty-eight medical groups did not have a discernable pattern over three years.

Please see next page.

SMALL DECREASE IN STATEWIDE RATE

Breast Cancer Screening

This measures the percentage of women ages 50 – 74 who received a mammogram during the prior two years (the measurement year or prior year).

The statewide rate for Breast Cancer Screening is 76 percent. **Table 28** displays the details of this statewide rate. **Figure 14** shows the average rate for this measure over time. There was no change in the statewide rate from 2014 to 2015.

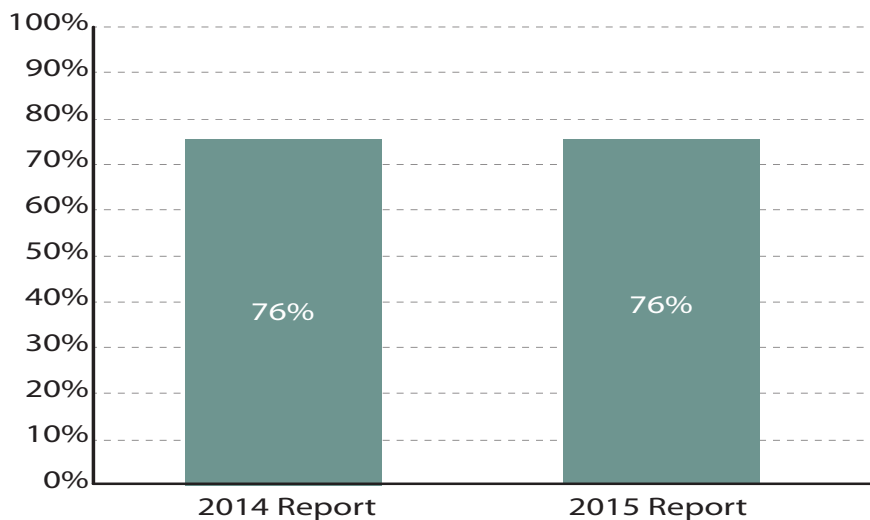

Data collected for this measure are from health plan claims.

TABLE 28: STATEWIDE RATE FOR FOLLOW-UP CARE FOR BREAST CANCER SCREENING

	Statewide Average	95% CI	Numerator (Patients who were screened)	Denominator
Breast Cancer Screening	75.7%	75.5%-75.8%	209,839	277,391

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 14: STATEWIDE RATES FOR FOLLOW-UP CARE FOR BREAST CANCER SCREENING

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR FOLLOW-UP CARE FOR BREAST CANCER SCREENING

Medical Group Results

Medical group results showed that an average of 81 percent of women 50-74 years of age had a mammogram. **Paul Larson Ob/Gyn** set the benchmark of 96 percent. There were 30 of 156 medical groups with rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Paul Larson Ob/Gyn Clinic*
- Gundersen Health System*
- Minnesota Gyn & Surgery*
- Clinic Sofia Ob/Gyn*
- Adefris Toppin Women’s Specialists*
- Mayo Clinic Health System - Lake City
- Premier OB/GYN of Minnesota

- Park Nicollet Health Services
- Essentia Health - Central Region
- Essentia Health - East Region
- Sanford Health - Fargo Region

Biggest improvement from 2014–2015

The greatest improvement since report year 2015 in Breast Cancer Screening for 50-74 years of age (medical group results) was made by **Chaska Urgent Care**, whose score increased by more than 16 percentage points.

Medical group performance over time (2013-2015)

Not applicable due to measure specification changes in 2014.

Please see next page.

SMALL DECREASE IN STATEWIDE RATE

Follow-up Care for Children Prescribed ADHD Medication

This measures the percentage of children newly prescribed attention-deficit/hyperactivity disorder (ADHD) medication who had at least one follow-up visit with a practitioner with prescribing authority within 30 days of when the first ADHD medication was dispensed.

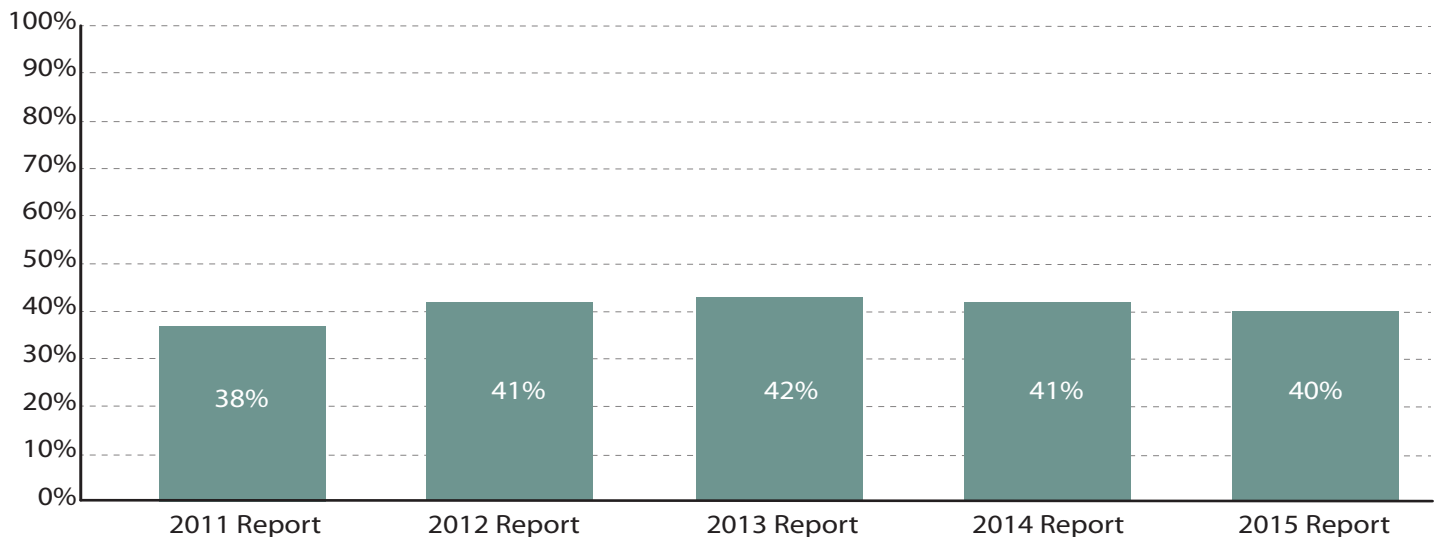

The statewide rate for Follow-up Care for Children Prescribed ADHD Medication is 41 percent. **Table 29** explains the details of the 2015 rate. **Figure 15** shows the average rate for this measure over time. The statewide rate decreased by one percentage point in from 2014 to 2015.

Data collected for this measure are from health plan claims.

TABLE 29: STATEWIDE RATE FOR FOLLOW-UP CARE FOR CHILDREN PRESCRIBED ADHD MEDICATION

	Statewide Average	95% CI	Numerator (Patients who received a follow-up visit)	Denominator
Follow-up Care for Children Prescribed ADHD Medication	40.5%	39.1%-41.9%	1,931	4,772

FIGURE 15: STATEWIDE RATES FOR FOLLOW-UP CARE FOR CHILDREN PRESCRIBED ADHD MEDICATION OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR FOLLOW-UP CARE FOR CHILDREN PRESCRIBED ADHD MEDICATION

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 41 percent of patients had a follow-up visit if they were prescribed ADHD medication. **Wayzata Children's Clinic** set the benchmark of 61 percent. There were three out of 40 medical groups with rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Wayzata Children's Clinic*
- Woodland Centers*
- HealthPartners Clinics*

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Follow-up Care for Children Prescribed ADHD Medication (medical group results) was made by **Wayzata Children's Clinic**, whose score increased by 34 percentage points.

PERFORMANCE HIGHLIGHTS FOR FOLLOW-UP CARE FOR CHILDREN PRESCRIBED ADHD MEDICATION

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in clinics with three years of data beginning in 2013. We looked for patterns of consistent high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

There were no medical groups that achieved consistently high performance and above average rates over the past three years for Follow-up Care for Children Prescribed ADHD Medication.

Four medical groups showed consistent improvement over three years:

- Affiliated Community Medical Centers
- Altru Health System
- HealthEast Clinics
- Mankato Clinic, Ltd.

Three medical groups showed consistent decreases over three years:

- Essentia Health - Central Region
- Integrity Health Network
- South Lake Pediatrics

One medical group had a rate that was relatively stable over three years:

- Park Nicollet Health Services

Twenty-two medical groups did not have a discernable pattern over three years.

Please see next page.

SMALL DECREASE IN STATEWIDE RATE

Childhood Immunization Status (Combo 3)

This measures the percentage of two year old children who received all of the following vaccines by their second birthday:

- Four DTaP/DT
- Three IPV
- One MMR
- Three H influenza type B
- Three Hepatitis B
- One VZV
- Four pneumococcal conjugate

The statewide rate for Childhood Immunization Status (Combo 3) is 76 percent. **Table 30** displays the details of the 2015 rate. **Figure 16** shows the average rate for Childhood Immunization over time. Since the 2007 report, the rate had stayed relatively stable. It dropped in 2011, but increased in 2012. The rate decreased again this year from 2014 by almost two percentage points.

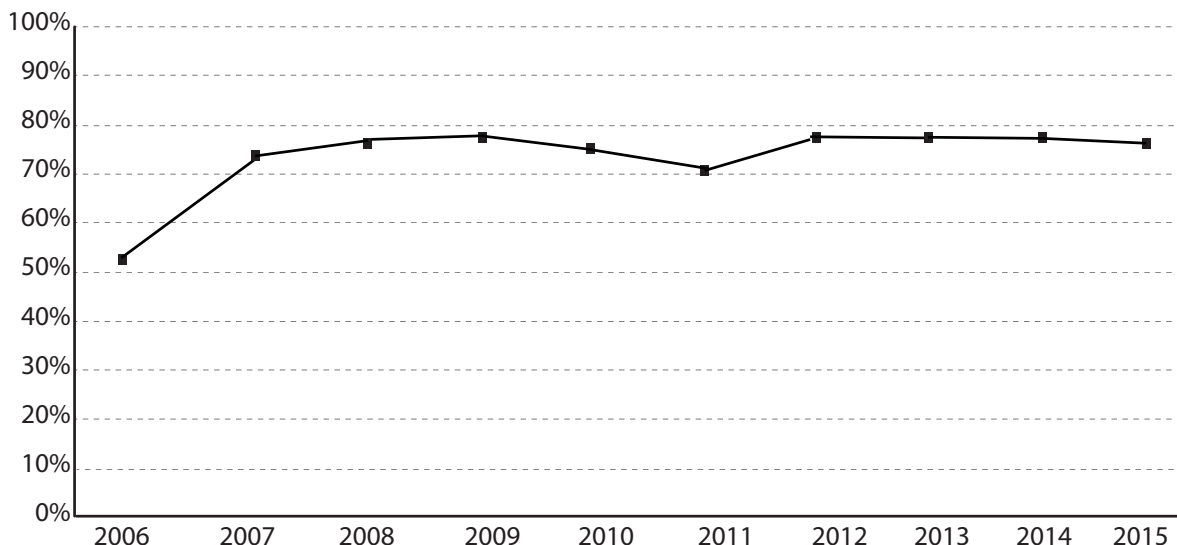

Data for this measure are collected from health plan claims, the Minnesota Immunization Information Connection registry (MIIC) and medical record review.

TABLE 30: STATEWIDE RATE FOR CHILDHOOD IMMUNIZATION STATUS (COMBO 3)

	Statewide Average (Weighted)	95% CI	Numerator (Patients who had all vaccinations)	Denominator (Patients sampled)	Total Eligible
Childhood Immunization	75.6%	74.5%-76.6%	5,044	6,742	27,013

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 16: STATEWIDE RATES FOR CHILDHOOD IMMUNIZATION STATUS (COMBO 3) OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

PERFORMANCE HIGHLIGHTS FOR CHILDHOOD IMMUNIZATION STATUS (COMBO 3)

Medical Group Results

Highest performers in 2015

Medical group results showed an average of 77 percent of two year old children were up-to-date with all recommended immunizations by their second birthday. **Winona Health Services** and **Essentia Health – West** set the benchmark of 92 percent. Eleven of 53 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure.

- Winona Health Services*
- Essentia Health – West*
- Central Pediatrics*
- Avera Medical Group- McGreevy Clinic, United Medical Center, Worthington Speciality Clinic*
- Mankato Clinic, Ltd.*
- Mayo Clinic
- Mayo Clinic Health System - Albert Lea and Austin
- Mayo Clinic Health System - Mankato
- CentraCare Health
- Sanford Health - Sioux Falls Region
- HealthPartners Clinics

Biggest improvement from 2014–2015

The greatest improvement since report year 2014 in Childhood Immunizations (medical group results) was made by **Avera Medical Group- McGreevy Clinic, United Medical Center, Worthington Specialty Clinic**, whose score increased by more than 32 percentage points.

PERFORMANCE HIGHLIGHTS FOR CHILDHOOD IMMUNIZATION STATUS (COMBO 3)

Medical Group Results

Medical group performance over time (2013-2015)

We reviewed the data to identify patterns of medical group performance in clinics with three years of data beginning in 2013. We looked for patterns of consistent high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

There was one medical groups that achieved consistently high performance and above average rates over the past three years for Childhood Immunization Status (Combo 3):

- Sanford Health - Sioux Falls Region

Three medical groups showed consistent improvement over three years:

- Essentia Health - West
- Lakewood Health System
- Winona Health Services

Nine medical groups showed consistent decreases over three years:

- Children's Clinic Network
- Essentia Health - East Region
- HealthEast Clinics
- Multicare Associates
- NorthPoint Health & Wellness Center
- Olmsted Medical Center
- Pediatric Services - Children's Physician Network
- University of Minnesota Physicians
- West Side Community Health Services

One medical groups had rates that were relatively stable over three years:

- Alexandria Clinic

Twenty-nine medical groups did not have a discernable pattern over three years.

Please see next page.

RESULTS BY MEASURE

Quality: Hospital

Measure results were made available courtesy of the Minnesota Hospital Association (MHA). While specific hospital measure results are not included in this report; they can be found on MNHealthScores.org and MNCM's corporate website, MNCM.org.

Agency for Healthcare Research and Quality (AHRQ) Measures

Hospital measure results include composite measures that were developed by the Agency for Healthcare Research and Quality (AHRQ) and include:

- **Inpatient Quality Indicators (IQI) Composite** rate includes mortality measures for selected conditions. This composite is used to assess the number of deaths for acute myocardial infarction, congestive heart failure, acute stroke, gastrointestinal hemorrhage, hip fracture and pneumonia.
- **Patient Safety Indicators (PSI) Composite** rate includes reporting of adverse events. This composite is used to assess the number of potentially preventable adverse events, such as ulcers, infections, fractures, hemorrhage, blood clots and lacerations.
- **Pediatric Patient Safety Indicators (PDI) Composite rate** includes reporting of pediatric adverse events. This composite is used to assess the number of potentially preventable adverse events such as ulcers, lacerations, hemorrhage, pneumonia and respiratory failure.

Other measures are individual rates and include:

- Inpatients death rate
- Obstetric trauma (with and without instrument)
- Pediatric heart surgery mortality rate

Minnesota Hospital Association Direct Measures

- **Vermont Oxford Network (VON)** - This measure reports late sepsis or meningitis in very low birth weight neonates by hospital. This measure is used to assess the infection rate for inborn and outborn infants meeting certain age and weight requirements for hospitals with a level 3 neonatal intensive care unit.

Centers for Disease Control and Prevention/National Healthcare Safety Network (NHSN)

- **Central line-associated bloodstream infection (CLABSI)** events by hospital measure is used to assess the infection rate by inpatient hospital unit for hospitals with a neonatal intensive care unit and/or pediatric intensive care unit.

For detailed results on VON and NHSN measures, please refer to MNCM.org/Reports-and-Websites/Reports-and-Data

Each year, MN Community Measurement's Measurement and Review Committee (MARC) approves the public reporting plan presented by MNCM for the following year. The recommendations for public reporting hospital measures takes into account both what is available on CMS's website "Hospital Compare" and recommendations made by the Hospital Quality Reporting Steering Committee, a group facilitated by Stratis Health through a

RESULTS BY MEASURE

Quality: Hospital

subcontract with MNCM as part of MDH's Statewide Quality Reporting and Measurement System. As a result, the hospital measures that are publicly reported can change periodically. For the most part, the measures no longer reported in 2015 were discontinued by the Centers for Medicare and Medicaid Services (CMS).

Please see next page.

RESULTS BY MEASURE

Patient Experience of Care: Clinic

Patient experience of care refers to everything that happens to patients from the moment they walk into the provider's office until the end of the appointment. It also includes phone calls and/or other contacts a patient has with the provider's office before, during or after appointments.

In 2008 and 2010, MNMCM piloted the implementation of a standard, comparable patient experience of care survey and process with participating medical groups and vendors. In 2012, MNMCM implemented the first ever statewide patient experience of care survey. The statewide process was mandated under the Minnesota Department of Health's (MDH) Statewide Quality Reporting and Measurement System (SQRMS) for eligible clinics who met size and clinical specialty criteria. The second statewide Patient Experience of Care survey cycle began in September 2014 under the biennial Rule.

The Patient Experience of Care data was collected from patient responses to the Clinician & Group – Consumer Assessment of Healthcare Providers and Systems® (CG-CAHPS) 12-Month adult survey. The survey was mailed or completed over the phone or web on a random sample of patients ages 18 and older who had office visits from September 1 through November 30, 2014. Eight hundred and forty-seven clinics in MN and neighboring states (130 more than in 2013) had surveys fielded on their behalf by CAHPS-certified survey vendors. The response rate was 33% and data on over 200,000 patient surveys was uploaded to MNMCM's Data Portal. MN's efforts continue to be the nation's largest statewide survey.

An analysis of the data produced four composite scores called "domains" for each clinic. These clinic domain scores are reported as top box scores – meaning the percent of responses that rated the clinic with the "most positive" response.

- **Access to Care** (availability of appointments, care and information when needed over the past year).
- **Provider Communication** (how well providers listen and explain care instructions in a way that patients understand).
- **Courteous and Helpful Office Staff** (how polite and helpful office staff had been, for example, a receptionist that treats patients with courtesy and respect).
- **Provider Rating** question (how a patient would rate the provider on a point scale (0 to 10) with zero being the worst possible provider rating and ten being the best possible provider rating).

Across all respondents, the overall top box domain averages for 2015 were:

- Access to Care: 60%
- Provider Communication: 83%
- Courteous & Helpful Office Staff: 81%
- Provider Rating: 79%

To view the individual results for all reporting clinics, go to MNHealthScores.org.

RESULTS BY MEASURE

Patient Experience of Care: Clinic

There were 39 clinics whose overall average across all responses was significantly higher in each of four domains when compared to the overall average of all other clinics. The 39 clinics rated above average in 2015 were generally located in the Minneapolis/West Metro area; were spread across different specialties and were from larger clinic systems. Conversely, the 28 high ranking clinics from 2013 were spread across different MN regions and one-third were from primary care clinics.

Highest performers in 2015

The clinics listed below are significantly higher in their overall domain averages (across all response options) than their peers for all four domains. The clinics are listed alphabetically by their medical group name.

- Adefris & Toppin Women’s Specialists
- Advancements in Allergy and Asthma Care, Ltd.
- Allina Health Clinics
 - Allina Health - Prescott
 - Allina Health - Mercy Women’s Health
- Allina Health Specialties
 - Allina Health Specialties - Minneapolis Heart Institute Crosby
 - Allina Health Specialties - Minneapolis Heart Institute Plymouth
 - Allina Health Specialties - Minneapolis Heart Institute Edina
 - Allina Health Specialties - Minneapolis Heart Institute - Baxter
- CentraCare Health
 - CentraCare River Campus-Nephrology
 - CentraCare River Campus-Rheumatology
- Claris Eye Care & Surgery
- Entira Family Clinics
 - Entira Family Clinics - Shoreview
- Essentia Health - Central Region
 - Essentia Health - Baxter Women’s Specialty Clinic
 - Essentia Health St. Joseph’s - Pillager
 - Essentia Health - Heart and Vascular Center (Brainerd)
 - Essentia Health - Cancer Center (Brainerd)
- HealthEast Clinics
 - HealthEast Cancer Care-St. John’s Hospital
- Hendricks Community Hospital Association
 - Hendricks Clinic
- Integrity Health Network
 - Northland Ear, Nose and Throat Assoc. - IHN
- Midwest Plastic Surgery
- Minnesota Oncology Hematology PA
 - Minnesota Oncology - Waconia
 - Minnesota Oncology - Woodbury
 - Minnesota Oncology - Fridley
- North Memorial
 - North Memorial Clinic - Plymouth City Center
- Oakdale Ob/Gyn
 - Oakdale Obstetrics & Gynecology, PA - WestHealth
 - Oakdale Obstetrics & Gynecology, PA - Maple Grove
 - Oakdale Obstetrics & Gynecology, PA-Crystal
- Park Nicollet Health Services
 - Park Nicollet Clinic - Prairie Center

RESULTS BY MEASURE

Patient Experience of Care: Hospital

The Centers for Medicare & Medicaid Services (CMS), along with the Agency for Healthcare Research and Quality (AHRQ), developed the HCAHPS® (Hospital Consumer Assessment of Healthcare Providers and Systems) Survey, also known as Hospital CAHPS®, to provide a standardized survey instrument and data collection methodology for measuring patients' perspectives on hospital care.

The HCAHPS® Survey is administered by CMS to a nation-wide random sample of hospital patients continuously throughout the year. The survey is not restricted to Medicare beneficiaries only. CMS cleans, adjusts and analyzes the data, then publicly reports the results on its website, www.medicare.gov/hospitalcompare. The Minnesota Hospital Association provides the data to MNCM on MN hospitals, who publicly reports it on MNHealthScores.org.

The most current HCAHPS® data that is publicly reported was collected from hospital admission dates January – December 2013 on 10 domains, or areas. The statewide rates for each of these domains are listed below in **Table 31** and represent the percent of patients who rated each domain with the most positive response. These averages represent data from between 130 and 140 MN hospitals. The domains represent top box averages, or averages for the most positive response (for example “Always”).

TABLE 31: STATEWIDE RATE FOR HOSPITAL PATIENT EXPERIENCE OF CARE DOMAINS

Domains	Minnesota Rate (% Most Positive)
Nurse communication	81
Doctor communication	84
Responsiveness of hospital staff	73
Pain management	72
Communication about medicines	67
Discharge information	88
Cleanliness of hospital environment	78
Quietness of hospital environment	67
Overall rating of hospital	74
Willingness to recommend hospital	74

For detailed measure results for individual Minnesota hospitals, please refer to MNHealthScores.org.

Please see next page.

RESULTS BY MEASURE

Cost: Total Cost of Care

Total Cost of Care

Total Cost of Care is a National Quality Forum (NQF)-endorsed methodology, which includes all health care costs associated with treating commercially-insured patients, including professional, facility inpatient and outpatient, pharmacy, lab, radiology, behavioral health and ancillary costs. NQF is considered the gold standard of health care measurement endorsement.

Costs representing more than 1.5 million patients were included in the results, which is the nation's most comprehensive look at the total cost of care. Information is available for 132 medical groups, representing 954 clinics across Minnesota and in neighboring communities on MNHealthScores.org.

The results, posted on MNHealthScores.org, include data based on 2014 claims from the four health plans in Minnesota with the largest commercially-insured populations: Blue Cross and Blue Shield of Minnesota, HealthPartners, Medica and PreferredOne. The health care costs evaluated for this report totaled more than \$8 billion.

The **2014 average monthly cost of medical care per patient is \$449**, a \$14 (3.2%) per patient per month change from 2013.

The total cost of care is the **full cost** – paid by both patients and health insurance companies. The amounts have been risk-adjusted and outlier costs have been removed to create a level playing field for all medical groups so true differences in cost can be evaluated.

Average Cost per Procedure

Average cost per Procedure is a measure of the average costs for high volume procedures per medical group, across multiple commercial data sources, in this case health plans.

The overall purpose of the Average Cost per Procedure measure is to provide the public a measure of cost of care by medical group by specific individual procedures. The measure includes the average amount paid to 201 medical groups, representing 1,143 clinics, on 85 commonly billed services. The information is presented in a searchable format on MNHealthScores.org

This information on both measures will continue to provide the community with more transparency on the actual cost of care and help MNMCM identify opportunities for more improved reporting for episodes of care or other average cost of care measures.

For detailed measure results for individual Minnesota medical groups, please refer to MNHealthScores.org.

Please see next page.

RESULTS BY MEASURE

Health Information Technology (HIT): Clinic

Health Information Technology (HIT) is the use of computers and computer programs, such as an electronic health record (EHR) to store, retrieve and securely transfer patient information electronically within health care settings. HIT use in clinics includes three phases: 1) adopting an EHR system; 2) using its various features to gather and manage patient information; and 3) exchanging information among provider’s offices.

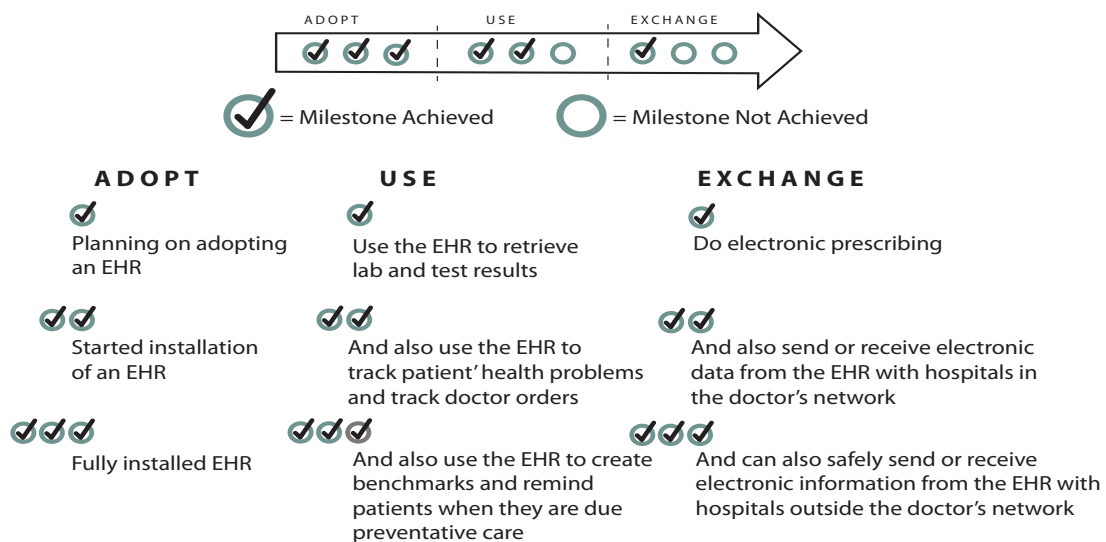

- **Adopt:** Information about a patient and the care that the patient needs is recorded in an EHR instead of a paper medical record.
- **Utilization:** A patient’s doctor uses the EHR to order lab tests, track health problems and improve the patient’s care.
- **Exchange:** A patient’s information is sent and received in a secure manner among the doctors involved in the patient’s care.

Providers, hospitals, laboratories and pharmacies that use HIT can document and share information about the care they provide. This can be helpful if a patient sees multiple providers or has a medical condition that requires specific types of care.

The **table** and **checkmarks** below indicate how successful Minnesota providers and other health care providers were in advancing the use of HIT in their practices. Each checkmark represents a milestone. More checkmarks shows more extensive HIT use, which relates to higher quality care.

Small differences in the number of checkmarks in the full report should not be of concern. It is more important to look at larger differences. The information in this report is collected annually between February and March, so results may not reflect recent advancements in an individual clinic’s efforts to use HIT.

For detailed measure results for individual clinics, please refer to MNHealthScores at MNHealthScores.org.

RESULTS BY MEASURE

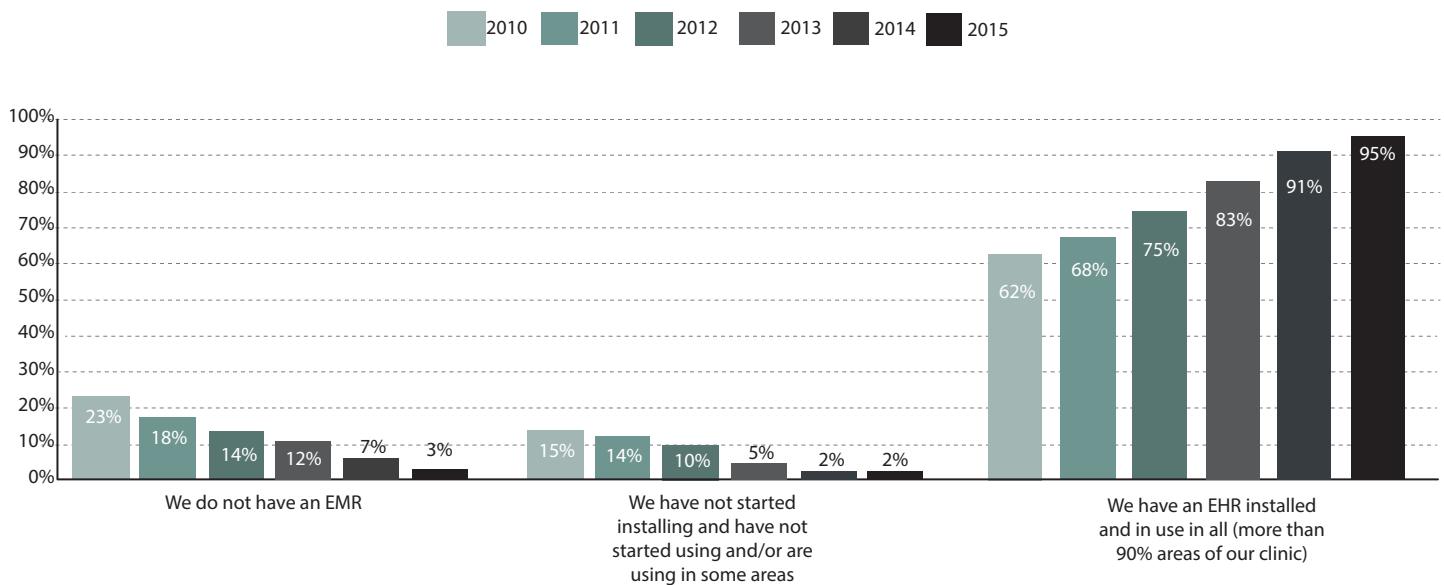

Health Information Technology (HIT): Clinic

The HIT measure results are based on clinic staff responses to the 2015 Health Information Technology (HIT) Ambulatory Clinic Survey, conducted electronically by MN Community Measurement (MNCM). A unique survey link was sent to each clinic registered with MNCM, in Minnesota and bordering states. The survey was fielded in early 2015 and a response rate of 80 percent was obtained from 1,293 respondents.

The total number of clinics responding to the HIT survey in previous years was: 1,316 in 2014, 1,364 in 2013; 1,247 in 2012; 1,313 in 2011; and 1,198 in 2010.

Figure 17 below represents the percentage of clinics in relevant electronic health record (EHR) adoption and utilization modes and show the increase of clinics' use of EHRs over time.

FIGURE 17: EHR ADOPTION FOR CLINICS OVER TIME

In 2015, 95 percent of respondents had an EHR installed and in use in all of their clinics, compared to 91 percent of clinics in 2014, 83 percent of clinics in 2013, 75 percent in 2012 and 68 percent in 2011. This is near a universal EHR installation rate across all clinics in Minnesota and some clinics in bordering states. Conversely, the percentage of clinics without an EHR (nor a plan to adopt in the near future) has continued to fall each year to the current low of three percent.

RESULTS BY MEASURE

Health Information Technology (HIT): Clinic

FIGURE 18: EHR UTILIZATION FOR CLINICS OVER TIME

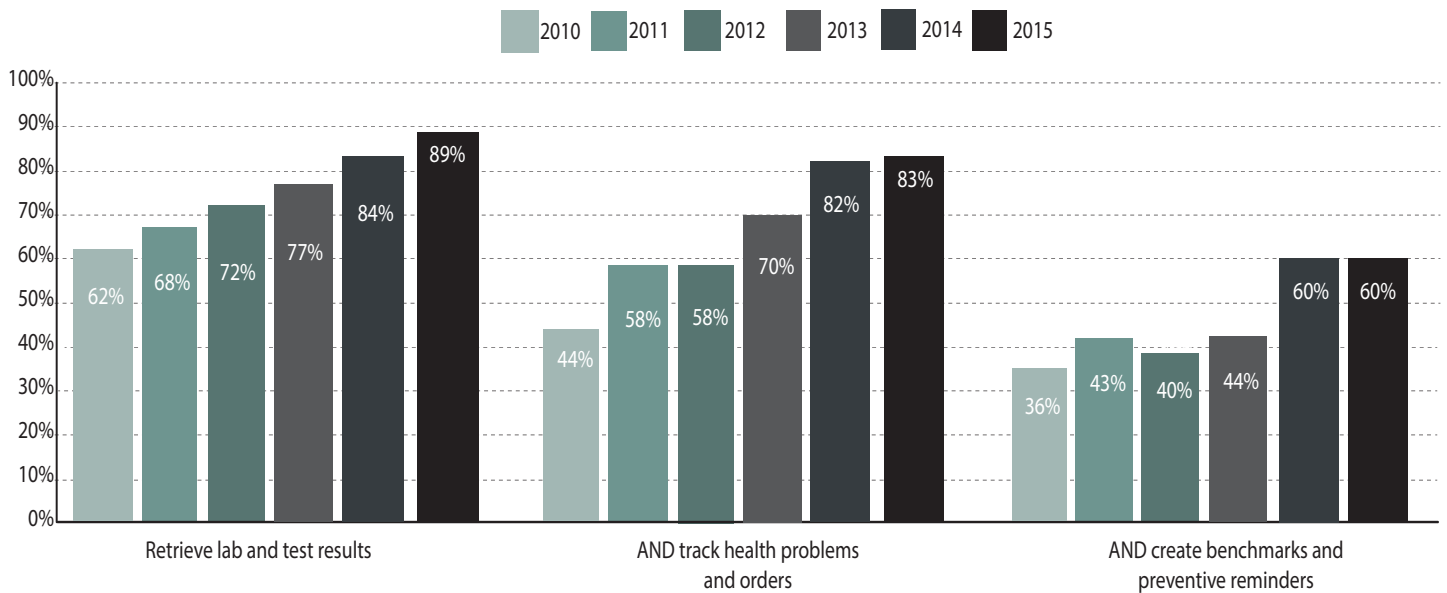

Figure 18 above shows that the advancement of EHR utilization has continued to increase over time. Eighty-nine percent of clinics used their EHR to retrieve lab and test results in 2015; and 83 percent of clinics also utilized their EHR for patient problem lists and orders. The most advanced phase of utilization, which includes data benchmarking and creating patient preventive exam reminders, has maintained the large increase reported in 2014 at 60 percent.

The use of EHRs for more advanced tasks such as transfer and receipt of patient information to improve coordinated care has also increased over the past few years for Minnesota clinics and some clinics in bordering states.

RESULTS BY MEASURE

Health Information Technology (HIT): Clinic

FIGURE 19: EHR INFORMATION EXCHANGE FOR CLINICS OVER TIME

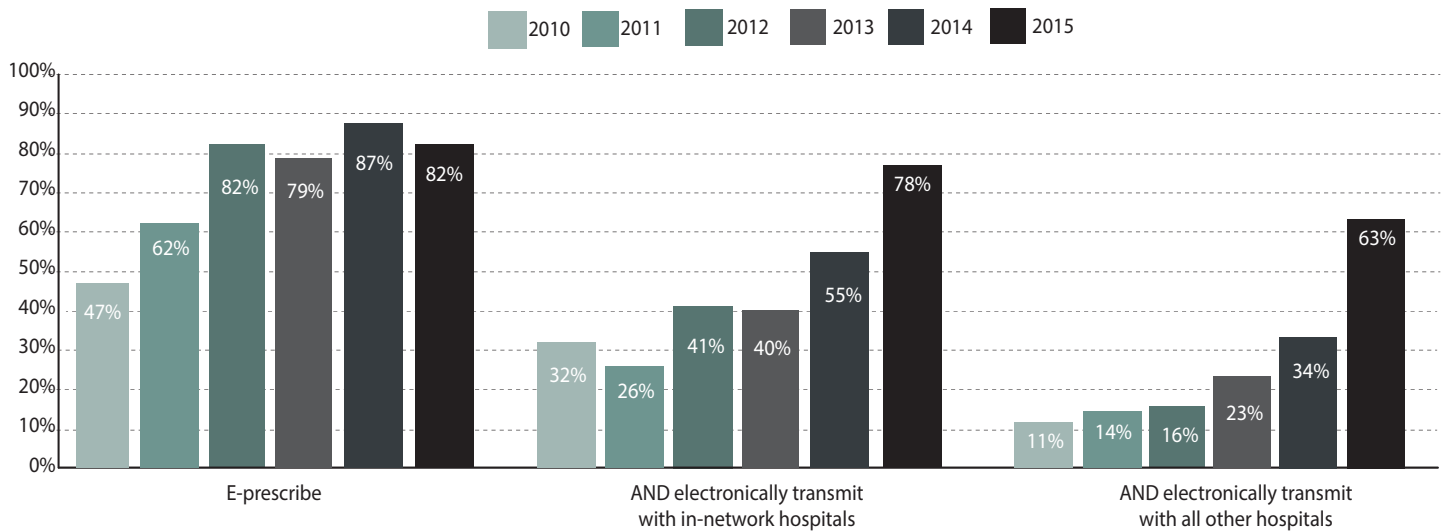

Figure 19 shows that 82 percent of clinics reported utilizing e-prescribing in 2015, down from 87% reported in 2014. E-prescribing increases efficiencies by electronically sending prescriptions directly to a participating pharmacy without any intermediary steps. More important is the ability of clinics to electronically send patient care information directly to other sites of care, both in-network and out-of-network. The increased use of this functionality is substantial: 78 percent of clinics exchange patient information within their network compared to 55 percent last year; and in 2015 two-thirds of clinics are able to exchange patient information with hospitals outside of their network. This universal exchange rate has nearly doubled since 2014.

In summary, MN clinics are advancing the interoperability of patient care. Two components of the Exchange phase showed marked improvement this year, and the third component (e-prescribing) decreased in 2015 but remains higher than national rates.

Please see next page.

SUMMARY OF RESULTS

Statewide and Medical Group Summary by Measure

Table 32 on the next page provides an overview of the statewide averages by measure. It also includes the percentage point change in the average rates from 2014 to 2015, as well as the percentage point change over time for applicable measures. We were unable to make rate comparisons to previous years for some measures because this was the first year the measures were reported or a measure experienced specification changes this year.

OF THOSE 19 MEASURES, 13 OF THEM HAD A STATEWIDE RATE THAT INCREASED.

Nineteen out of 32 measures had performance rates that could be compared to last year. Of those 19 measures, 13 of them had a statewide rate that increased. There were two measures with large increases in their statewide rate: Immunizations for Adolescents and Avoidance of Antibiotic Treatment in Adults With Acute Bronchitis. Two measures had moderate increases in their statewide rate: Depression PHQ-9 Follow-up at Six Months and 12 Months. The majority of the increases in statewide rates were small in the following eight measures: Colorectal

Cancer Screening, Chlamydia Screening, Depression Response at Six Months, Appropriate Testing for Children with Pharyngitis, Depression Response at 12 Months, Appropriate Treatment for Children with URI, Depression Remission at Six Months and Depression Remission at 12 Months. Six measures had small decreases in their statewide rates: Use of Spirometry Testing in the Assessment and Diagnosis of COPD, Maternity Care: C-section Rate, PHQ-9 Utilization, Breast Cancer Screening, Follow up Care for Children Prescribed ADHD Medication, Childhood Immunization (Combo 3). There were no measures that fell into the category of moderate or large decreases in statewide rate.

The measures that showed noticeable increases from 2014 include **Immunizations for Adolescents** and

Appropriate Treatment for Adult Bronchitis. This is the fourth year of reporting for Immunizations for Adolescents, and the statewide rate continues to increase. Bronchitis has also shown improvements since 2012, and this trend continued.

The **Childhood Immunization Status (Combo 3)** has increased by 24 percentage points since 2006; however, this increase has not been stable with the statewide rate decreasing slightly this year. This indicates that there is continued room for improvement for this measure.

Six of the statewide averages for the seven **depression care** measures achieved slight increases. While there is significant room for improvement, it is encouraging to see progress being made for this specific population.

There were **seven measures added to this report:** Pediatric Preventive Care: Adolescent Mental Health Screening, Pediatric Preventive Care: Overweight Counseling, Spinal Surgery: Lumbar Discectomy/Laminotomy (two measures), Spinal Surgery: Lumbar Spinal Fusion (two measures) and Total Knee Replacement (functional status measure is new in 2015). Each measure shows room for improvement.

There were **six measures that underwent measure specification changes:** Optimal Diabetes Care, Optimal Vascular Care, Optimal Asthma Control - Adults, Optimal Asthma Control - Children, Cervical Cancer Screening and Controlling High Blood Pressure. Due to the changes, no trend data is available for these measures.

SUMMARY OF RESULTS

Statewide and Medical Group Summary by Measure

TABLE 32: MN COMMUNITY MEASUREMENT STATEWIDE RESULTS COMPARISONS TO PREVIOUS YEARS

Quality Measure	2015 Statewide Average (2013 Dates of Service)	Percentage Point Change Statewide 2014 vs. 2015	Percentage Point Change Over Time
New Measures			
Cervical Cancer Screening* (Medical Group Level Results)	71.8%	N/A	N/A
Pediatric Preventive Care: Adolescent Mental Health Screening* (Clinic Level Results)	39.9%	N/A	N/A
Pediatric Preventive Care: Overweight Counseling* (Clinic Level Results)	85.3%	N/A	N/A
Spinal Surgery D/L: Procedures w/Pre-op & Post-op ODI (Medical Group Level Results)	36.9%	N/A	N/A
Spinal Surgery D/L: Functional Status at at Three Months Post-op (Medical Group Level Results)	22.0	N/A	N/A
Spinal Surgery LSF: Procedures w/Pre-op & Post-op ODI (Medical Group Level Results)	42.6%	N/A	N/A
Spinal Surgery LSF: Functional Status at at One Year Post-op (Medical Group Level Results)	16.7	N/A	N/A
Total Knee Replacement (TKR): Functional Status at at One Year Post-op (Medical Group Level Results)	17.1	N/A	N/A
Optimal Diabetes Care* (Clinic Level Results)	53.5%	N/A	N/A
Optimal Vascular Care* (Clinic Level Results)	69.3%	N/A	N/A
Optimal Asthma Control - Children Ages 5-17* (Clinic Level Results)	59.3%	N/A	N/A
Optimal Asthma Care - Adults Ages 18-50* (Clinic Level Results)	52.3%	N/A	N/A
Controlling High Blood Pressure* (Medical Group Level Results)	76.2%	N/A	N/A
Large Increase in Statewide Rate			
Immunizations for Adolescents * (Medical Group Level Results)	74.8%	12.8 ↑	21.4 ↑ (4 years)
Total Knee Replacement (TKR): TKR Procedure w/Pre-Op & Post-Op OKS (Medical Group Level Results)	24.0%	5.8 ↑	5.8 ↑ (2 years)
Appropriate Treatment for Adult Bronchitis (Medical Group Level Results)	33.9%	5.1 ↑	14.6 ↑ (7 years)
Moderate Increase in Statewide Rate			
PHQ-9 Follow-Up at Six Months (Clinic Level Results)	34.1%	3.3 ↑	6.4 ↑ (3 years)
PHQ-9 Follow-Up at 12 Months (Clinic Level Results)	25.9%	2.5 ↑	3.6 ↑ (3 years)
Small Increase in Statewide Rate			
Colorectal Cancer Screening* (Clinic Level Results)	74.1%	1.5 ↑	7.7 ↑ (5 years)
Chlamydia Screening in Women (Ages 16-24) (Medical Group Level Results)	48.9%	1.4 ↑	1.6 ↑ (7 years)
Depression Response at Six Months (Clinic Level Results)	13.9%	1.1 ↑	4.7 ↑ (5 years)
Appropriate Treatment for Children with Pharyngitis (Medical Group Level Results)	89.2%	0.9 ↑	7.4 ↑ (10 years)
Depression Response at 12 Months (Clinic Level Results)	10.5%	0.7 ↑	2.3 ↑ (5 years)
Appropriate Treatment for Children with URI (Medical Group Level Results)	90.6%	0.7 ↑	4.9 ↑ (10 years)
Depression Remission at Six Months (Clinic Level Results)	8.3%	0.6 ↑	2.5 ↑ (7 years)
Depression Remission at 12 Months (Clinic Level Results)	6.4%	0.5 ↑	1.6 ↑ (3 years)
Small Decrease in Statewide Rate			
Use of Spirometry Testing in the Assessment and Diagnosis of COPD (Medical Group Level Results)	39.1%	0.1 ↓	4.1 ↑ (6 years)
Maternity Care: Primary C-Section Rate (Medical Group Level Results)	21.9%	0.3 ↓	0.3 ↓ (2 years)
PHQ-9 Utilization (Clinic Level Results)	69.7%	0.3 ↓	2.2 ↓ (7 years)
Breast Cancer Screening (Mammograms) (Medical Group Level Results)	75.7%	0.6 ↓	0.6 ↓ (2 years)
Follow-Up Care for Children Prescribed ADHD Medication (Medical Group Level Results)	40.5%	1.0 ↓	2.4 ↑ (5 years)
Childhood Immunization Status (Combo 3)* (Medical Group Level Results)	75.6%	1.9 ↓	23.6 ↑ (10 years)

*These statewide averages are weighted (see methods).

N/A = Measure specifications changed or the measure is in its first year of implementation. Comparisons cannot be made.

See page 408 for measure category definitions.

APPENDIX

Highest Performers in 2015 by Medical Group Type for Clinical Measures

The following **tables 33-37** list the high-performing medical groups by type based on the clinical measures on which they were reported. These groups had above-average rates on most clinical measures.

Seven primary care medical groups achieved unadjusted rates that were above average more frequently than others. Each of these medical groups achieved above-average rates on at least half of the clinical measures on which they were reported.

TABLE 33: HIGH PERFORMING MEDICAL GROUPS IN 2015 - PRIMARY CARE

Measure	Health Partners Clinics 16 out of 20	Park Nicollet Health Services 15 out of 20	Stillwater Medical Group 13 out of 20	Allina Health 12 out of 20	Essentia Health - East Region 11 out of 20	Fairview Health Services 11 out of 20	Mankato Clinic, Ltd. 11 out of 20

Future Plans

As we look forward, MN Community Measurement remains focused on driving improvements in health and health care for all Minnesotans. We are deeply grateful for the collaboration, time and contributions of the stakeholders who help us fulfill this mission. In the coming year, we hope to accomplish measurement and public reporting milestones in risk adjustment and segmentation; resource use and utilization; and specialty care and patient-reported outcomes.

Race, Ethnicity, Language and Country of Origin Reporting and Analysis

Last year, we released the first-ever *Health Equity of Care Report*, which featured five measures segmented by race, Hispanic ethnicity, country of origin and preferred language data at statewide and regional levels. This year, we released the same measures segmented at statewide, regional and medical group levels, as well as four Patient Experience of Care domains segmented by race at statewide and regional levels. Providing results at the most granular level possible influences change because it's reported at the level where the most accountability is held. And by adding Patient Experience of Care, the results are providing a more nuanced view of health care disparities in Minnesota.

We will also be studying data on race, Hispanic ethnicity, country of origin and preferred language to explore risk adjustment for individual clinics and medical groups. In the coming year, our Risk Adjustment Committee will evaluate and provide recommendations on the use of these factors in MNMCM's risk adjustment.

Resource Use and Utilization

With two years of Total Cost of Care (TCOC) data now publicly reported, our Cost Technical Advisory Group turned its attention this year to evaluating an equally-important piece of the puzzle: resource use. TCOC can illustrate what medical groups are spending compared to their peers, including how their spending on certain categories of care (e.g. pharmacy, inpatient care) compares. But it has limited ability to explain why a medical group might be spending more or less than others. The resource use measure fills in that gap by beginning to show where the group may or may not be spending its resources most efficiently.

Additionally, the resource use measure will allow for more detailed information on the utilization of particular types of care – such as pharmacy or emergency room services – for both individual groups and statewide, which will allow leaders to further target efforts to reduce cost and increase efficiency.

Specialty Care and Patient Reported Outcomes

We achieved multiple milestones in measurement and public reporting of specialty care and patient reported outcome measures in 2015, including the release of new total knee replacement, spinal lumbar fusion and spinal lumbar discectomy / laminotomy functional status measures. All three of these measures evaluate orthopedic providers and utilize a patient-reported outcome tool to gather information directly from the patient about the change in knee or back function since their surgery.

We will continue to focus on these areas in the coming year. MNMCM recently completed measure development

Future Plans

work in the areas of low back pain and cancer care. We will pilot these measures in 2016. The Acute and Sub-Acute Low Back Pain Functional Status measure will be piloted in chiropractic settings in partnership with Chiropractic Care of Minnesota, Inc. (CCMI); and the Symptom Control during Chemotherapy measure set will be piloted in oncology practices. Both utilize patient-reported outcome tools. We are excited to develop these measures that focus on settings of care and specialties where there is a gap in measurement and public reporting.

In addition, data collection will occur late in 2016 for the third cycle of statewide Patient Experience of Care measurement in partnership with the Minnesota Department of Health. This information offers a glimpse into how patients feel about care they're receiving at clinics in Minnesota and surrounding communities. The survey is conducted every other year.

All of these initiatives feed into our overall vision remains to be the trusted source for performance measurement and public reporting of data across the spectrum of health care.

Acknowledgements

The *2015 Health Care Quality Report* is a collaborative effort led by MN Community Measurement on behalf of the Minnesota health care community and the broader public. We would like to acknowledge the contributions of all organizations that shared their resources, and the individuals who shared their time and expertise to make this report possible. We offer our sincerest thanks to:

The health plans and county-based purchasing organizations that contributed data for this report: Blue Cross and Blue Shield of Minnesota, HealthPartners, Itasca Medical Care, Medica, Metropolitan Health Plan, PreferredOne, PrimeWest, Sanford Health Plan, South Country Health Alliance, and UCare.

The medical groups and clinics that submitted data for this report: Names are listed on pages 225-227.

The Data Planning Committee, (delivering technical guidance on measure specifications and data collection): Alex Tava, Annette Bauman, Brett Skyles, Charles Anderson, David Sawyer, Jake Marotz, James Krizak, Jason Johnson, Jonathon Moon, Katie Tastad, Lisa Deml, Margareth Ranheim, Rachel Woods, Sarah Cook-Burton, Sherri Ryan and Tracy Kueter.

The members of all measure development committees who contributed their time and expertise in developing new measures.

The Measurement and Reporting Advisory Committee, (providing expertise in reporting policy and measure selection): Allan Ross, Ann Robinow, Bill Nersesian, Bruce Penner, Cara Broich, Caryn McGear, Christine Norton, Dan Walczak, David Homans, David Satin, Howard Epstein, Jeffrey Rank, Jordan Kautz, Kris Soegaard, Laura Saliterman, Mark Sonneborn, Matt Flory, Peter Dehnel, Rahshana Price-Isuk, Robert Lloyd, Stefan Gildemeister, Sue Knudson, Tamiko Morgan and Tim Hernandez.

The MN Community Measurement Board of Directors, (granting organizational oversight and leadership support): Ann Carlson, Beth Averbeck, Brian Whited, Cara McNulty, Christine Norton, Dan Trajano, Daryll Dykes, Dave Knutson, David Homans, Jim Schowalter, Lawrence Massa, Nancy Nelson, Pam Houg, Paul Mattessich, Penny Wheeler, Robert Meiches, Sanne Magnan, Scott Leitz, Tamiko Morgan and Tim Hernandez.

Multispecialty and Primary Care Medical Groups Reported in 2015 - (168)

- AALFA Family Clinic
- Advanced Medical Clinic
- Affiliated Community Medical Centers
- Albany Medical Center
- Alexandria Clinic
- Allina Health Clinics
- Allina Health Specialties
- Altru Health System
- Amery Hospital and Clinic
- Apple Valley Medical Clinic
- Appleton Area Health Services
- Avera Medical Group
- Avera Medical Group - Corsica/Salem/St. Joseph
- Avera Medical Group - Pipestone
- Avera Medical Group- Aberdeen/Ipswich/Marshall County Clinic
- Avera Medical Group- Marshall
- Avera Medical Group- McGreevy Clinic, United Medical Center, Worthington Speciality Clinic
- Avera Medical Group- Tyler Medical Clinic
- Axis Medical Center
- Baldwin Area Medical Center
- Bluestone Physician Services
- Boynton Health Service
- Buffalo Clinic, PA - IHN
- Burnett Medical Center
- Burnsville Family Physicians
- Catalyst Medical Clinic
- Cedar Riverside People's Center
- CentraCare Family Health Center
- CentraCare Health
- Chippewa County Montevideo Hospital & Medical Clinic
- Community Memorial Hospital
- Community University Health Care Center
- Courage Kenny Rehabilitation Institute
- Cuyuna Regional Medical Center
- Dawson Clinic
- Dr. Bobby K. Yang Medical Clinic
- Dulcimer Medical Center
- Duluth Family Medicine Clinic
- Edina Family Physicians, P.A.
- Edina Sports Health & Wellness
- Entira Family Clinics
- Essentia Health - Ada
- Essentia Health - Central Region
- Essentia Health - East Region
- Essentia Health - Fosston
- Essentia Health - Graceville
- Essentia Health - St. Mary's
- Essentia Health - West
- Fairview Health Services
- Fairview Medical Group
- Fairview Mesaba Clinics
- Family Practice Medical Center of Willmar
- Family Tree Clinic - Neighborhood HealthCare Network
- FamilyHealth Medical Clinics
- FirstLight Health System
- Foley Medical Center
- France Avenue Family Physicians - Minnesota Healthcare Network
- Gateway Family Health Clinic
- Glencoe Regional Health Services
- Glenwood Medical Center
- Grand Itasca Clinic
- Gundersen Health System
- HealthEast Clinics
- HealthPartners Central Minnesota Clinics
- HealthPartners Clinics
- Hendricks Community Hospital Association
- Hennepin County Medical Center (HCMC) Clinics
- Hudson Physicians - Minnesota Healthcare Network
- Hutchinson Health
- Indian Health Board of Minneapolis
- Integrity Health Network
- Kittson Memorial Clinic
- Lac Qui Parle Clinic
- Lake City Family Physicians PC
- Lake Region Healthcare
- Lake Superior Community Health Center
- Lake View Clinic - Two Harbors
- Lakeview Clinic
- Lakeville Family Practice
- Lakewood Health Center Clinic
- Lakewood Health System
- Life Medical
- Longville Lakes Clinic - IHN
- Madelia Community Hospital & Clinic
- Mankato Clinic, Ltd.
- Mayo Clinic
- Mayo Clinic Health System
- Mayo Clinic Health System - Albert Lea and Austin
- Mayo Clinic Health System - Eau Claire
- Mayo Clinic Health System - Fairmont
- Mayo Clinic Health System - Franciscan Healthcare in La Crosse
- Mayo Clinic Health System - Lake City
- Mayo Clinic Health System - Mankato
- Mayo Clinic Health System - New Prague
- Mayo Clinic Health System - Red Wing
- Mayo Clinic Health System - Springfield
- Mayo Clinic Health System - St. James
- Mayo Clinic Health System - Waseca
- Mayo Clinic Health System-Cannon Falls
- Mayo Clinic Health System-Owatonna
- Mayo Clinic Health System-Red Cedar, Inc.
- Meeker Memorial Clinic
- Metropolitan Medical Associates
- Mille Lacs Health System
- Multicare Associates
- Murray County Clinic
- Native American Community Clinic
- Neighborhood Healthsource
- New Hope Crystal Medical Clinic
- North Clinic
- North Memorial
- North Valley Health Center
- NorthPoint Health & Wellness Center
- Northwest Family Physicians
- Olmsted Medical Center
- Open Cities Health Center
- Open Door Health Center
- Ortonville Area Health Services-Northside Medical Clinic
- Park Nicollet Health Services
- Parkview Medical Clinic - Minnesota Healthcare Network
- Parkway Family Physicians-Minnesota Healthcare Network
- Planned Parenthood Minnesota, North Dakota, South Dakota
- Prairie Ridge Hospital & Health Services
- Rainy Lake Medical Center
- Raiter Clinic, LTD - IHN
- Range Medical Services - IHN
- Renville County Hospital and Clinics
- Richard Schoewe MD
- Richfield Medical Group
- Ridgeview Clinics
- River's Edge Hospital & Clinic
- RiverView Health
- Riverwood Healthcare Center
- Sacred Heart Mercy Health Care Center
- Sanford Health - Fargo Region
- Sanford Health - Sioux Falls Region
- Sawtooth Mountain Clinic
- Scandia Clinic
- Scenic Rivers Health Services
- Sibley Medical Center DBA Ridgeview Sibley Medical Center
- Sleepy Eye Medical Center
- Smart Clinic
- Southdale Internal Medicine, P.A.
- Southside Community Health Services
- St. Cloud Hospital - Behavioral Health Clinic
- St. Cloud Medical Group NW, So., Cold Spring, Clear Water - IHN
- St. Croix Regional Medical Center
- St. Luke's Clinics
- St. Paul Family Medical Center
- Stevens Community Medical Center
- Stillwater Medical Group
- Synergy Family Physicians, P.A
- Thao Xoua MD
- Thomas A. Sult, MD. 3rd Opinion
- Tri-County Health Care
- United Family Medicine
- United Hospital District Clinic
- Unity Family Healthcare - Avon
- Unity Family Healthcare, Family Medical Center
- University of Minnesota Physicians
- Valley Family Practice- MHN
- Vibrant Health Family Clinics and Minnesota Health Network
- West Side Community Health Services
- Westfields Hospital and Clinic
- Williams Integracare Clinic
- Windom Family Medical Center
- Winona Health Services

Other Types of Medical Groups Reported in 2015

Ten Allergy Medical Groups

- Advancements in Allergy and Asthma Care
- Allergy & Asthma Specialists, PA
- Allergy, Asthma & Immunology Clinic
- Allergy, Asthma & Pulmonary Associates, PA
- Children's Respiratory & Critical Care Specialists
- Midwest Ear, Nose & Throat Specialists
- Minnesota Allergy & Asthma Clinic, PA
- Minnesota Lung Center/Minnesota Sleep Institute
- Southdale Allergy & Asthma Clinic
- St. Paul Allergy & Asthma Clinic, P.A.

Twenty-two Behavioral Health Medical Groups

- Associated Clinic of Psychology
- Associates in Psychiatry & Psychology
- BHSI
- Caritas Mental Health Clinic
- Carver County Mental Health Program
- Face to Face Health & Counseling Service, Inc.
- Family Life Center
- Hamm Clinic
- Lakeland Mental Health Center
- Mental Health Resources
- Midwest Center for Personal & Family Development
- Minnesota Mental Health Clinics
- Northern Pines Mental Health Center, Inc.
- Northern Psychiatric Associates
- People Incorporated Stark Mental Health Clinic
- Ramsey County Mental Health
- Scott County Mental Health Center
- South Central Human Relations Center
- The Emily Program
- Western Mental Health Center, Inc.
- Woodland Centers
- Zumbro Valley Health Center

One Endocrinology Medical Group

- Endocrinology Clinic of Mpls.

One Neurosurgery Medical Group

- MKMD Neurosurgery PLLC dba KIM Neurosurgery PLLC

Seventeen Obstetrics/Gynecology Medical Groups

- Adefris & Toppin Women's Specialists
- Clinic Sofia Ob/Gyn
- Comprehensive Healthcare for Women
- Essentia Health - Brainerd Specialty Clinics
- John A. Haugen Associates, PA
- Metropolitan Obstetrics & Gynecology
- Minnesota Gyn & Surgery
- Oakdale Ob/Gyn
- OBGYN West
- Obstetrics and Gynecology Associates
- Partners Ob/Gyn
- Paul Larson Ob/Gyn Clinic
- Premier OB/GYN of Minnesota
- Southdale Ob/Gyn Consultants
- Western ObGyn
- Women & Adolescent Gynecology Center
- Women's Health Consultants

Fourteen Orthopedic Medical Groups

- Bigfork Valley Hospital, Clinics & Communities
- Downtown Orthopedics, P.A.
- Heartland Orthopedic Specialists
- Institute for Low Back and Neck Care
- Little Falls Orthopedics
- Midwest Spine & Brain Institute
- Minneapolis Orthopaedics
- Northern Orthopedics, Ltd.
- Northern Pines Orthopaedic Clinic
- Southwest Minnesota Orthopedics and Sports Medicine
- St. Cloud Orthopedics
- St. Francis Orthopedic Clinic
- The Orthopaedic & Fracture Clinic
- Twin Cities Spine Center

Eighteen Pediatric/Adolescent Medicine Medical Groups

- All About Children Pediatrics - CHN
- Central Pediatrics
- Children's Clinic Network
- Children's Health Care
- Children's Hospitals and Clinics of Minnesota
- Dakota Pediatrics, P.A.
- Eagan Valley Pediatrics
- Edina Pediatrics
- Fridley Children's & Teenagers' Medical Center - CPN
- Mendakota Pediatrics Ltd
- North Metro Pediatrics
- Northern Lights Pediatric and Adolescent Medicine
- Pediatric & Young Adult Medicine
- Pediatric and Adolescent Services
- Pediatric Services - CPN
- South Lake Pediatrics
- Southdale Pediatric Associates, Ltd
- Wayzata Children's Clinic

Eleven Urgent/Convenience Care Medical Groups

- Chaska Urgent Care
- Emergency Physicians, P.A.
- Express Healthcare
- Fairview Express Care
- MinuteClinic
- Physicians Urgent Care
- Priority Pediatrics Urgent Care
- Seven Day Clinic
- Suburban Emergency Associates
- Target Clinic
- The Urgency Room by Medicor Acute Care
- Urgent Care Doctors Office

Hospitals Reporting AHRQ and CMS Measures in 2015 - (132)

- Abbott Northwestern Hospital
- Albany Area Hospital and Medical Center
- Appleton Area Health Services
- Avera Marshall Regional Medical Center
- Bigfork Valley Hospital
- Buffalo Hospital
- Cambridge Medical Center
- CentraCare Health System - Long Prairie
- CentraCare Health System - Melrose
- CentraCare Health System - Monticello
- CentraCare Health System - Paynesville

- St. John's Hospital
- St. Joseph's Area Health Services Inc.
- St. Joseph's Hospital
- St. Luke's Hospital
- Stevens Community Medical Center
- Swift County-Benson Hospital
- Tri-County Health Care
- Tyler Healthcare Center/Avera
- United Hospital
- United Hospital District
- Unity Hospital
- University of Minnesota Medical Center, Fairview
- US PHS Indian Hospital - Cass Lake
- Windom Area Hospital
- Winona Health Services
- Woodwinds Health Campus

We wish to thank all medical groups, clinics and hospitals in Minnesota and bordering communities for their continued commitment to quality improvement as a means to provide the best care possible for patients.

Summary of Risk Adjustment Results by Measure

Not all patients have the same likelihood of achieving optimal health outcomes due to barriers based on demographic, physical or socio-economic situations. **Risk Adjustment** is the process of adjusting measures to account for the barriers that are outside the control or influence of the health care provider. Appropriate risk adjustment creates a more normal distribution of results.

The risk adjustment calculation uses an **Actual to Expected** methodology. This methodology does not alter the result of a clinic/medical group; the actual rate remains unchanged. Instead, that rate is compared to a unique expected rate based on the proportion of each risk category for each clinic/medical group rather than the raw market average.

To test whether there was a statistically significant difference between the expected and actual rates by each clinic/medical group, a **one population proportions test** was used. This method was employed to test the proportion of optimally managed patients attributed to a clinic/medical group compared to a specific value for that clinic/medical group. In the MNMCM case, the specified value is an expected rate calculated taking into account the overall state rate and adjusted for risk factors specific to the measure. The methodology uses a 99 percent test of significance.

The comparison between clinics/medical groups is the aforementioned test of significance and the **actual to expected ratio**: actual percentage of patients meeting criteria divided by the expected percentage of patients meeting criteria for the particular entities' mix of patient risk.

The six measures that were risk-adjusted using the methodology described above are detailed in **Table 38** on the next page along with the variables upon which they were risk-adjusted.

Summary of Risk Adjustment Results by Measure

TABLE 38: 2015 RISK ADJUSTMENT VARIABLE(S) PER MEASURE

Measure	Risk Adjustment Variable(s)
Optimal Asthma Control Children Optimal Asthma Control Adults	Insurance Product Type (Commercial; Medicare; MN Government Programs; and Self-Pay/Uninsured)
Optimal Vascular Care	Insurance Product Type (Commercial; Medicare; MN Government Programs; and Self-Pay/Uninsured) Age (18-25; 26-50; 51-65; and 66-75)
Optimal Diabetes Care	Insurance Product Type (Commercial; Medicare; MN Government Programs; and Self-Pay/Uninsured) Age (18-25; 26-50; 51-65; and 66-75) Diabetes Type (Type 1 and Type 2)
Colorectal Cancer Screening	Insurance Product Type (Commercial; Medicare; MN Government Programs; and Self-Pay/Uninsured) Age (51-65 and 66-75)
Lumbar Discectomy/Laminotomy Lumbar Spinal Fusion	Insurance Product Type (Commercial; Medicare; MN Government Programs; and Self-Pay/Uninsured) – <i>Segmented by insurance when sample size allows</i> Initial Functional Status (0-25; 26-50; 51-75; 76-100)
Total Knee Replacement	Insurance Product Type (Commercial; Medicare; MN Government Programs; and Self-Pay/Uninsured) – <i>Segmented by insurance when sample size allows</i> Initial Functional Status (1-12; 13-24; 25-36; 36-48)
Maternity	Age (≤17; 18-20; 21-25; 26-30; 31-35; 36+) BMI (<18.49, 18.5-24.9, 25-29.9, 30-35.9, 36+) Insurance Product Type (Commercial; Medicare; MN Government Programs; and Self-Pay/Uninsured)

Future risk adjustment is not intended be limited to only these nine measures; this is the first step. In 2016, MN Community Measurement will continue to study recommended variables for these measures as well as additional measures and will work to create an overall structure for how risk adjustment is applied for our measures.

The measures that are **not risk-adjusted** in the following charts are:

- Cervical Cancer Screening
- Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening
- Pediatric Preventive Care: Overweight Counseling
- Spinal Surgery: Lumbar Discectomy/Laminotomy Process Measure
- Spinal Surgery: Lumbar Spinal Fusion Process Measure
- Total Knee Replacement Process Measure
- Controlling High Blood Pressure
- Immunizations for Adolescents
- Avoidance of Antibiotics in the Treatment of Adult Bronchitis
- Depression PHQ-9 Follow-up at 6 Months
- Depression PHQ-9 Follow-up at 12 Months
- Chlamydia Screening in Women
- Depression Response at Six Months
- Appropriate Testing for Children with Pharyngitis
- Depression Response at Twelve Months
- Appropriate Treatment for Children with URI
- Depression Remission at Six Months
- Depression Remission at Twelve Months
- Use of Spirometry Testing in the Assessment and Diagnosis of COPD
- PHQ-9 Utilization
- Breast Cancer Screening
- Follow-Up Care for Children Prescribed ADHD Medication
- Childhood Immunization (Combo 3)

Cervical Cancer Screening (Medical Group Level Results)

Clinic Name	Rate (Actual)	Lower Bound of 95% CI	Upper Bound of 95% CI	N	Total Population Or Sample	Rating

APPENDIX 1

Data Sources and Data Collection

Direct Data Submission (DDS) Measures

The data source for clinic results was the clinic itself. All data elements were specified by MNMCM in our 2015 Direct Data Submission (DDS) guides. These guides provided detailed steps and instructions to ensure that clinics submitted data in a standard format.

Data for DDS measures were reported at two levels: by clinic site and medical group. Clinics were defined as single locations where patients received care. Medical groups usually consist of multiple clinics. Often, the medical group provides centralized administrative functions for multiple clinics.

Medical groups/clinics that submit data for individual clinics first registered through the secure MNMCM Data Portal. Once registered, medical groups/clinics submitted the required data elements directly through the Data Portal. This is referred to as MNMCM's Direct Data Submission (DDS) process. Medical groups/clinics had the option to submit data on a clinic's total patient population (preferred) or, if necessary, a representative random sample of the clinic's total patient population. Detailed instructions for sampling were also provided in the 2014 DDS Guides. Medical groups/clinics that submitted through the DDS process must submit data for all clinics within the medical group as applicable.

Clinic abstractors collected data from medical records either by extracting the data from an electronic medical record (EMR) via data query or from abstraction of paper-based medical records. Medical groups completed numerous quality checks before data was submitted to MNMCM. Detailed instructions for medical groups/clinics conducting quality checks were provided in the 2015 DDS Guides. All appropriate HIPAA requirements were followed.

An extensive validation process conducted by MNMCM staff included pre-submission data certification, post-submission data quality checks of all files, and audits of the data source for selected clinics. For medical record audits, MNMCM used the National Committee for Quality Assurance's (NCQA) "8 and 30" File Sampling Procedure,

developed in 1996 in consultation with Johns Hopkins University. For a detailed description of this procedure, see www.ncqa.org. Audits were conducted by trained MNMCM auditors who were independent of medical groups and/or clinics. The validation process ensures that the data are reliable, complete and consistent.

APPENDIX 1

Data Sources and Data Collection

Hospital Measures

Agency for Healthcare Research and Quality (AHRQ) Hospital Measures

The hospital rates for AHRQ measures were calculated by the Minnesota Hospital Association (MHA), using the UB-92 Administrative Database. Minnesota hospitals send all-payer, discharge-level information to the MHA at varying intervals, but at least quarterly. The MHA performs data checks before the data is accepted for inclusion in the measure calculations. All patients using non-federal, nonrehabilitation, community hospitals in Minnesota are included in the data. The data contain numerous clinical and nonclinical data variables including age, sex, race, ethnicity, length of stay, discharge status, source of payment, total charges, diagnoses, and procedures, as well as certain hospital demographic information.

For the inpatient quality indicators (IQI), the discharge data is used to track volume of admissions for specific procedures that were performed, and mortality indicators for certain procedures. For the patient safety indicators, the measures indicate potential inpatient complications and patient safety concerns following surgeries, other procedures, and childbirth. The numerator includes only cases where a secondary diagnosis code flags a potentially preventable complication.

The AHRQ data is provided to MN Community Measurement by MHA.

Centers for Medicare and Medicaid Services (CMS) Hospital Compare Measures

The Hospital Compare rates are based on each hospital's discharge data, including administrative data and medical record information that tie to each individual measure. The data is retrospective and includes the principal diagnosis and other ICD-9-CM diagnosis and procedures codes, as well as patient demographic information including age, sex, race, and ethnicity. Hospitals provide the required data for each measure to the Quality Improvement Organization (QIO) Clinical Data Warehouse. In Minnesota, the QIO is Stratis Health.

Hospitals use a CMS abstraction tool to send abstracted data to the QIO Data Warehouse through QualityNet (a HIPAA-compliant, secure data transmission vehicle), or they hire a vendor to submit the data on their behalf. Data submissions include auditing processes which check to ensure the data is consistent with the required specifications for samples sizes, outliers, and missing data. The QIO stores this data and provides four quarters of data (updated quarterly) for reporting and quality improvement efforts.

The Hospital Compare measure data is provided to MN Community Measurement by MHA.

Care That Protects Patients from Medical Errors and Does Not Cause Harm

APPENDIX 2

Methodology

Measures Reported

Three types of measures were reported at the medical group level: HEDIS measures that used an administrative data only method; HEDIS measures that used a hybrid method (administrative claims data plus medical record review); and measures that used data submitted directly to MNCM by medical groups and clinics from electronic health records or paper-based medical charts, known as Direct Data Submission (DDS).

The following HEDIS measures used the **hybrid method**:

- Cervical Cancer Screening
- Controlling High Blood Pressure
- Childhood Immunization Status - Combo 3
- Immunizations for Adolescents

The following HEDIS measures used the **administrative method**:

- Use of Spirometry Testing in the Assessment and Diagnosis of COPD
- Follow-Up Care for Children Prescribed ADHD Medication
- Appropriate Treatment for Children with Upper Respiratory Infection
- Appropriate Testing for Children with Pharyngitis
- Avoidance of Antibiotics in the Treatment of Adult Bronchitis
- Breast Cancer Screening
- Chlamydia Screening in Women

The following measures used data submitted directly to MNCM by medical groups and clinics known as DDS:

- Colorectal Cancer Screening
- Depression Care:
 - Depression Remission at Six Months
 - Depression Response at Six Months
 - PHQ-9 Follow-up at Six Months
 - Depression Remission at 12 Months
 - Depression Response at 12 Months
 - PHQ-9 Follow-up at 12 Months
 - PHQ-9 Utilization
- Maternity Care: Primary C-Section Rate
- Optimal Asthma Control - Adults
- Optimal Asthma Control- Children
- Optimal Diabetes Care
- Optimal Vascular Care
- Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening
- Pediatric Preventive Care: Overweight Counseling

- Total Knee Replacement
 - Procedures with Pre-op & Post-op OKS at One Yr
 - Functional Status at One Year Post-op
- Spinal Surgery: Lumbar Discectomy/Laminotomy
 - Procedures with Pre-op & Post-op ODI at Three Months
 - Functional Status at Three Months Post-op
- Spinal Surgery: Lumbar Spinal Fusion
 - Procedures with Pre-op & Post-op ODI at One Yr
 - Functional Status at Three Months Post-op

In November 2013, the MNCM Measure Review Committee was formed with the charge of annually reviewing the DDS and HEDIS measures on the MNCM slate to ensure their collection and reporting continue to be of value to the community. The formation of this committee allows for increased stakeholder participation/influence and transparency/awareness of the measure review process.

Measurement specifications for medical group level results were calculated using NCQA's 2015 HEDIS Technical Specifications. Measurement specifications for clinic level results were calculated by MNCM's Data Portal using MNCM's 2015 DDS Guide and Technical Specifications.

MNCM combines measures into the following categories to summarize medical group/clinic performance:

- **Large Increase** in Statewide Rate or **Large Decrease** in Statewide Rate - These categories include measures that displayed a statewide rate change whose absolute value was greater than or equal to five percentage points from 2014 to 2015.
- **Moderate Increase** in Statewide Rate or **Moderate Decrease** in Statewide Rate - These categories include measures that displayed a statewide rate change whose absolute value was greater than or equal to three percentage points and less than five percentage points from 2014 to 2015.
- **Small Increase** in Statewide Rate or **Small Decrease** in Statewide Rate - These categories include measures that displayed a statewide rate change whose absolute value was less than three percentage point from 2014 to 2015.

For Total Cost of Care measure methodology, please refer to the Total Cost of Care Report here: <http://mncm.org/total-cost-of-care-report/>

APPENDIX 2

Methodology

Eligible Population Specifications

The eligible populations for the administrative and hybrid measures were identified by each participating health plan using its respective administrative databases. NCQA's 2015 HEDIS Technical Specifications provided the standard definitions for the eligible population for each measure, which included data elements such as age, continuous enrollment, and anchor date requirements. For administrative measures, the entire eligible population was the denominator. For hybrid measures, the eligible population served as the sampling frame from which to draw the number of patients for chart audit and the reference for weighting.

The eligible populations for the measures reported through the DDS process to MNMCM by medical groups and clinics were identified by a medical group on behalf of their individual clinics. MNMCM's 2015 Direct Data Submission (DDS) Guides provided technical specifications for the standard definitions of eligible population for each measure, which included elements such as age, appropriate diagnosis codes, and number of visits needed in the measurement timeframe.

Patient Attribution to Medical Groups/Clinics

For HEDIS measures, health plans assigned patients to a medical group using a standard medical group definition based on tax identification numbers (TIN). Administrative billing codes determined the frequency of patient visits to medical groups. For most of the HEDIS measures, patients were assigned to the medical group they visited most frequently during the measurement year. Patients who visited two or more medical groups with the same frequency were attributed to a medical group visited most recently in the measurement year. For three of the HEDIS measures – Appropriate Testing for Children with Pharyngitis, Appropriate Treatment for Children with Upper Respiratory Infection, and Avoidance of Antibiotics in the Treatment of Adult Bronchitis – patients were assigned to the clinic they visited for the specific service. For one measure – Follow-Up Care for Children Prescribed ADHD Medication – patients were assigned to the provider who prescribed the medication and then to the medical group where that provider practices.

In order to submit data at the clinic level for the DDS measures, medical groups attributed each patient to a single clinic within their medical group. Each medical group attested to using MNMCM's patient attribution

methodology outlined in the data collection guides. Patients were generally attributed to an assigned primary care provider. Others are attributed to a provider who saw the patient most often in the measurement year or most recently in the measurement year.

Sampling

For HEDIS Hybrid Measures

As noted previously, the hybrid method required each participating health plan to first identify the eligible population meeting measurement specifications using its administrative databases. This population of eligibles served as the sampling frame from which to draw the denominator (the patients for whom medical record review would be completed). The resource-intensive nature of medical record review necessitated pulling a random sample of the eligible population, for medical record review. Medical record review was conducted for all enrollees drawn for the sample.

MNMCM used a two-stage, random sampling process for the hybrid measures. This strategy was designed with statisticians to ensure reporting for the maximum number of medical groups while minimizing the impact of weighting on the results for any one medical group. The sampling procedure started with the health plans providing a data file containing a record for each eligible patient for each hybrid measure. This file also identified eligible patients that had been selected for the annual HEDIS sample. Additional patients were then selected from the remaining eligible population to meet MNMCM minimum reporting requirements.

For Measures Collected by Direct Data Submission

Clinics may submit data on their full population (preferred) or, if necessary, a random sample of at least 60 patients per clinic. However, they are strongly encouraged to submit their total population of patients to achieve more precise rates and allow health plans to identify health plan product type. For clinics that chose to submit a sample, the 2015 DDS Guides provided technical specifications and accepted methods to select a systematic sample. If submitting a sample of patients, the clinic must attest to use one of the accepted sampling methods as part of the pre-submission data certification process. Further MNMCM review is completed as necessary.

APPENDIX 2

Methodology

The following measures required total population submission: Depression Care measures, Total Knee Replacement, Spinal Surgery: Lumbar Discectomy/Laminotomy, Spinal Surgery: Lumbar Spinal Fusion and Maternity Care: Primary C-section Rate.

Numerator Specifications

For HEDIS administrative measures, the numerator was the number of patients from the eligible population who met numerator targets. For HEDIS hybrid measures, the numerator was the number of patients from the sample who met numerator targets.

For DDS measures, the numerator was the number of patients identified from either the eligible population or the sample who met the numerator targets. The targets were specified by MNMCM in the 2015 DDS Guides technical specifications. Clinical quality data that the medical group submits is used to calculate the numerator; this data is verified through MNMCM's validation process.

Weighting

For HEDIS Hybrid Measures

Because data for the hybrid measures were taken from a sample, results were weighted to obtain accurate rates. This allowed for aggregation and unbiased reporting by medical group. Weighting was a cost-saving measure that enabled MNMCM to draw a sample on which to estimate medical group and statewide rates. Weighting was applied to efficiently utilize health plan resources for data collection on a randomly sampled population. Weights were calculated for each sampling stratum (i.e., health plan/health plan product/medical group). A weight was equal to the total eligible population for that stratum divided by the total sample size. In calculating rates for a population – medical group or statewide – the denominator was the sum of the weights for all patients in that population, and the numerator was the sum of the weights for patients in the population who met the numerator targets.

Direct Data Submission (DDS) Measures

Clinics may submit data for the DDS measures on their full population (preferred) of, if necessary, a sample of at least 60 patients per clinic. For clinics that elected to submit a sample from their total population, results were weighted to account for the total population.

Calculating Rates

For HEDIS Administrative and Hybrid Measures

Administrative and hybrid measures were reported at a medical group level and were expressed as percentages. They were calculated as 100 times the number who met the numerator targets divided by the number who were eligible for the measure. Rates calculated for measures using the administrative method were straightforward. However, rates calculated for measures using the hybrid method required weighting because of the sampling procedures. Rates and 95-percent-asymmetrical confidence intervals were calculated for each measure for each medical group. Asymmetrical confidence intervals were used to avoid confidence interval lower-bound values less than zero and upper bound values greater than one hundred. Medical group rates are first calculated for each group and then a medical group average is calculated. The medical group average is displayed when comparing medical group performance to provide context.

For Measures Collected by Direct Data Submission (DDS)

Rates were expressed as percentages, calculated as 100 times the number that met the numerator specifications divided by the number in the denominator for the measure. Rates from measures using the total eligible population are straightforward calculations whereby the total eligible population serves as the denominator. Due to the dynamic nature of patient populations, rates and 95 percent confidence intervals are calculated for each measure for each medical group/clinic regardless of whether the full population or a sample is submitted. Rates are first calculated for each medical group/clinic and then an overall average rate is calculated. The overall average rate is displayed when comparing a single medical group/clinic to the performance of all medical groups/clinics to provide context.

For the orthopedic (Total Knee Replacement, Spinal Surgery: Lumbar Discectomy/Laminotomy, Spinal Surgery: Lumbar Spinal Fusion) functional status measures, the result is reported as the average score change. The denominator is the number of procedures that had both a pre-operative and post-operative tool administered and completed. An average score change is calculated for each medical group. The overall average score change is displayed when comparing a single medical group to the performance of all medical groups to provide context.

APPENDIX 2

Methodology

Risk Adjustment

Risk adjustment is a technique used to level the playing field for clinics/medical groups by adjusting for the differences in risk amongst specific patient groups. The process should isolate the clinic/medical group's true impact on patients' health and allow them to be compared more easily.

The risk adjustment calculation employed by MN Community Measurement uses an **Actual to Expected** methodology. This methodology does not alter a clinic/medical group's result; the actual rate remains unchanged. Instead, each clinic/medical group's rate is compared to a unique expected rate for that clinic/medical group that is based on the mix of patient risk seen at that clinic/medical group, rather than the raw market average.

To test whether there was a statistically significant difference between the expected and actual rates by each clinic/medical group, a **one population proportions** test was used. This method was employed to test the proportion of optimally managed patients attributed to a clinic/medical group compared to a specific value for that clinic/medical group. In the MNMCM case, the specified value is an expected rate calculated taking into account the overall state rate and adjusted for risk factors specific to the measure. The methodology uses a 99 percent test of significance.

The comparison between clinics/medical groups is the aforementioned test of significance and **the actual to expected ratio**: actual percentage of patients meeting criteria divided by the expected percentage of patients meeting criteria for the particular entities' mix of patient risk.

Nine Direct Data Submission (DDS) measures were risk-adjusted using this methodology (see page 229 for list of measures). The Summary of Risk Adjustment Results by Measure section contains tables for both risk-adjusted and non-risk-adjusted measures.

The tables for the **risk-adjusted measures** include the following columns in order from left to right:

- **Medical Group Name**
- **Rate (Actual)** = Actual percentage of patients meeting criteria (unadjusted rate)
- **Lower Bound of 95% CI** = Lower bound of the 95 percent confidence interval for the medical group's/clinic's unadjusted rate
- **Upper Bound of 95% CI** = Upper bound of the 95 percent confidence interval for the medical group's/clinic's unadjusted rate
- **N** = Number of patients at a medical group/clinic site that meet the denominator criteria for the measure
- **Total Population or Sample** = Indicates whether the medical group/clinic submitted their total population or a sample of patients for the measure (see page 409 for explanation)
- **Rate (Expected)** = Expected percentage of patients meeting criteria based on the clinic's/medical group's mix of patient risk (adjusted rate)
- **Actual to Expected Ratio** = Actual percentage of patients meeting criteria divided by the expected percentage of patients meeting criteria for the clinic's/medical group's mix of patient risk
- **Rating** = Rating of medical group/clinic displayed on MNHealthScores.org
 - **TOP** = Top 15 clinics or Top 5 medical groups, as long as the clinic or medical group meets the Above rating criteria. For measures that have less than 10 reportable medical groups, there is no TOP assignment.
 - **Above** = Clinic or medical group's actual rate is significantly above their expected rate
 - **Expected** = Clinic or medical group's actual rate is equivalent to their expected rate
 - **Below** = Clinic or medical group's actual rate is significantly below their expected rate

The tables for the **non-risk-adjusted measures** include all of the columns noted for risk-adjusted measures except Rate (Expected) and Actual to Expected Ratio. Additionally, non-risk-adjusted measures are rated on the following scale:

- **TOP** = Top 15 clinics or Top 5 medical groups, as long as the clinic or medical group meets the Above rating criteria. For measures that have less than 10 reportable medical groups, there is no TOP assignment.

APPENDIX 2

Methodology

- **Above** = Clinic or medical group's actual rate is significantly above the statewide average
- **Average** = Clinic or medical group's actual rate is equivalent to the statewide average
- **Below** = Clinic or medical group's actual rate is significantly below the statewide average

Limitations

The medical groups and clinics identified in this report do not represent all medical groups and clinics in Minnesota. MNMCM established minimum thresholds for public reporting to ensure statistically reliable rates. Only medical groups and clinics that met these thresholds were reported. Because hybrid measures are based on a sample, a higher threshold is used: 60 patients per medical group was the minimum requirement for public reporting to ensure a reasonable level of confidence in the reported rate. However, administrative measures are based on a complete census of managed care patients, so a minimum threshold of 30 patients per medical group was required. DDS measures are based on complete census of all patients regardless of payer, so a minimum threshold of 30 patients per clinic was required. It should also be noted that although medical groups and clinics are reported for some measures they may not be reported for all measures.

Data used to calculate rates for the HEDIS administrative and hybrid measures reflected patients insured through 10 health plans. Medical groups with patients who were insured through other health plans, who were uninsured, who self-pay, or who were served by a Medicaid/Medicare fee-for-service program were not reflected in these results. Therefore, the data for these measures does not necessarily represent a medical group's entire patient population. In addition, caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Data Analyses

Identifying High Performing Medical Groups/Clinics

For each measure, both individual medical group rates and a medical group average rate were calculated. Medical groups that achieved high performance were identified by comparing the individual medical

group/clinic rate with the medical group average. Medical groups that had rates that were fully above the medical group average and 95 percent confidence intervals were noted as high performers. These high performers were highlighted in the results by measure section for each measure. The performance rates for all medical groups were presented in descending order. Additionally, the Top 5 performers are identified via an asterisk (*). The same methods were applied at the clinic-level for Optimal Diabetes Care, Optimal Vascular Care, Depression measures, Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening, Pediatric Preventive Care: Overweight Counseling, Optimal Asthma Control, Maternity Care: Primary C-Section and Colorectal Cancer Screening. However, at the clinic level, Top 15 performers are identified via an asterisk (*).

Identifying Medical Groups and Clinics with Biggest Improvements

For each measure, individual medical group and clinic rates during report year 2015 were compared with their rates during report year 2014, calculating an absolute percentage point difference. Medical groups and clinics with the largest percentage point increases were identified.

Medical Group and Clinic Performance Over Time (Three Years)

This analysis was done to determine patterns of medical group and clinic performance over time per measure. Patterns were reviewed for the three reporting years (2013, 2014 and 2015). See "Medical Group Performance Over Time (2013-2015)" in the results by measure section for those measures where three years of data was available.

Patterns in rate changes over the three reporting years were reviewed. Only medical groups with reportable rates for each of the three reporting periods per measure were included in the analysis. The percent and number of medical groups were reported for each of the following patterns of rate changes over the past three years for each measure:

- **Consistently improved:** Medical groups with more than a two percentage point increase between each consecutive year.

APPENDIX 2

Methodology

- **Relatively stable:** Medical groups that had no more than a two percentage point increase or decrease between each consecutive year (-two percent – +two percent).
- **Consistently decreased:** Medical groups with more than a two percentage point decrease between each consecutive year.
- **Variable performance (with an improvement or with a decline):** Medical groups with an up/down pattern that was not consistent and did not fall into one of the other categories.

Patient Experience

This is a biannual measure that was first implemented statewide in 2012. The second statewide distribution cycle occurred in 2014 for dates of service September 1, 2014 – November 30, 2014. The 2014 measure utilized the Clinic and Group - Consumer Assessment of Healthcare Providers and Systems® (CG-CAHPS) 12-Month Survey for adults and included the provision to distribute the Adult and/or Child 12-Month Patient Centered Medical Home (PCMH) survey for certified Health Care Home clinics. Public reporting occurred in third quarter of 2015 on MNMCM's MNHealthScores site.

The Patient Experience of Care Survey is required for all clinics who saw a minimum number of unique adult patients for a face-to-face visit during the eligibility period (February 1, 2014 – April 30, 2014). This patient count threshold was based on the number of providers at the clinic as a proxy for clinic size. Exclusion from the measure was for psychiatry-only practices. The number of clinics participating in the 2014 survey was 847 sites in Minnesota and surrounding states (WI, ND, SD).

Patient visits from September 1, 2014 – November 30, 2014 were used to select a random sample of unique adult patients, 18 and older, to receive the survey. Eligible Health Care Home-certified clinics could opt to also distribute the Child 12-Month survey. The patient count threshold was used again to determine the size of the random sample pulled by vendors.

MNCM conducted extensive validation with both the clinics and survey vendors. Clinics submitted documentation to MNMCM on their visit selection process,

providing screen shots of the relevant field criteria. Survey vendors submitted draft survey documents and test files for each client to ensure random file selection. All components had to be approved before surveying could begin.

Final data files were uploaded to MNMCM's Data Portal in April 2015 and field validation checks were done to ensure correct file format.

Data analysis using the national standard CAHPS program produces four composite domain scores: Access to Care, Provider Communication, Courteous and Helpful Office Staff, and a Provider Rating. All publicly reported results meet minimum reliability thresholds for reporting (at 0.7 reliability score). All individual clinic patient experience scores are reported on MNHealthScores.org.

Health Information Technology (HIT) Survey

MNCM initially developed the Health Information Technology (HIT) Ambulatory Clinic Survey in 2009 using input from a multi-stakeholder workgroup. Goals of the survey were to assess HIT adoption and use in Minnesota in a format that could be used by multiple organizations; and assess the use and application of these technologies and how they might affect patient care. The workgroup also incorporated information from the federal government's meaningful use criteria into survey questions to increase alignment with other HIT initiatives.

The survey remained relatively constant until late in 2012 when MNMCM reconvened the stakeholder workgroup to review the survey and make necessary changes to better align with Meaningful Use Stage 2 and other state HIT inquiries. The workgroup consisted of a balanced representation of clinical staff, health plans, HIT content experts, and state agencies (MDH, DHS).

The survey continued as an online instrument and for 2015, email invitations with a unique web link were sent to all MNMCM registered clinics on February 18, 2015. The survey remained open for 30 days.

APPENDIX 2

Methodology

Medical groups with multiple clinic sites that had the same technology systems and identical processes of care were allowed to request duplication of a set of survey responses across all clinic locations. This improved the efficiency of responding for their clinic sites. In 2015, MNMCM received 126 duplication requests from medical groups which added an additional 971 clinic responses to the survey results.

Reminder emails were distributed to non-responders midway through the open period, and one week before close. In total, 1,609 clinic sites in Minnesota and neighboring states received the email invitation to the HIT Survey. At survey close, 1,293 responded for a final response rate of 80 percent.

Hospital Measures

Agency for Healthcare Research and Quality (AHRQ) Measures

Software provided by the Agency for Healthcare Research and Quality was used by the Minnesota Hospital Association (MHA) to calculate the inpatient quality indicators (IQIs) and patient safety indicators (PSI for adults/PDI for pediatric patients) composites. Administrative discharge data for calendar year 2014 received from Minnesota hospitals was aggregated by the zip code of patient residence.

The IQI composite is a weighted average of the mortality indicators for patients admitted for select conditions for each hospital using this discharge data. The PSI and PDI composites are weighted averages of most of the patient safety indicators for each hospital using discharge data.

Other measure rates (inpatients death rate, obstetric trauma (with and without instrument), pediatric heart surgery mortality rate, CLABSI, and Vermont Oxford Network (VON)) are calculated as the number of adverse events or complications tied to a procedure divided by the number of admissions for that procedure.

Any statewide average for measures are calculated

using all of the data submitted to the Minnesota QIO Warehouse for hospitals with at least one case in the measure's denominator.

Hospital Compare Measures (Centers for Medicare and Medicaid Services)

The HCAHPS survey is administered monthly to a random sample of adult patients across medical conditions between 48 hours and six weeks after discharge; the survey is not restricted to Medicare beneficiaries. Hospitals may either use an approved survey vendor, or collect their own HCAHPS data (if approved by CMS to do so). HCAHPS can be implemented in four different survey modes: mail, telephone, mail with telephone follow-up, or active interactive voice recognition (IVR). Hospitals can use the HCAHPS survey alone, or include additional questions after the core HCAHPS items. Hospitals must survey patients throughout each month of the year.

The data is submitted to the HCAHPS data warehouse and cleaned and analyzed by CMS. CMS calculates each hospital's 10 HCAHPS domain scores using a standardized macro analysis program. The results are posted on CMS's website, HospitalCompare, for four quarters on a rolling basis. The most current statewide data represents inpatient stays during 2014.

APPENDIX 3

MNHealthScores.org

A critical component of MN Community Measurement’s (MNCM) mission is to publicly report health care information, with the goal of driving improvement. Our public reporting website is MNHealthScores.org; it is focused on and designed for patients, their families and the public to help them make educated choices about where to obtain care and what care they should expect.

In 2014, we redesigned MNHealthScores.org to better meet the needs of Minnesota health care consumers. To actively participate in their care and help drive improvement, consumers must understand and be able to use the information that MNCM reports. The site features consumer-friendly data displays that represent best practices gleaned from more than a decade of academic research on consumer interpretation of health care cost and quality data displays. The data displays highlight a HealthScore for each clinic, medical group or hospital for each measure. This HealthScore is an easy-to-understand icon and label that categorizes data into clear groupings. This provides consumers with important context to understand the rates.

Legend

What does the HealthScore mean?

Ratings of clinics, medical groups and hospitals are grouped into the following categories. Not every health topic features results in all five categories.

- | | |
|---|---|
| <p>TOP  Top – Top 15 clinics or top 5 medical groups, as long as their results are above average.</p> | <p>BELOW AVERAGE  Below Average – Results are significantly below the state average.</p> |
| <p>ABOVE AVERAGE  Above Average – Results are significantly above the state average.</p> | <p>NOT REPORTABLE  Not Reportable - No rate is available due to clinic or hospital not submitting information, not providing the type of care, or having too few patients to be reported.</p> |
| <p>AVERAGE  Average – Results are equivalent to the state average.</p> | |

Throughout the redesign project, a variety of stakeholders provided input, including consumers, providers, employers, payers and others. We conducted extensive testing with consumers to ensure the site is user-friendly and easy to understand. Additionally, all clinics and medical groups whose data is displayed on the site were given an opportunity to preview their HealthScore results, and attend a webinar to preview the new website design, prior to the launch of the new website.

APPENDIX 3

MNHealthScores

In our effort to make the site as consumer-friendly as possible, some measure names were adjusted for clarity. They include:

Measure Name for Data Collection	Measure Name on MNHealthScores.org
Adolescent Immunization	Vaccinations: Adolescents
Appropriate Testing for Children with Pharyngitis	Sore Throats: Children
Appropriate Testing for Children with Upper Respiratory Infection	Colds: Children
Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis	Bronchitis
Childhood Immunization	Vaccinations: Children
Controlling High Blood Pressure	High Blood Pressure
Depression: 6 Month PHQ-9 Follow Up	Depression: Follow Up (6 Months)
Depression: 6 Month Remission	Depression: Feel Better (6 Months)
Depression: 6 Month Response	Depression: Improved Symptoms (6 Months)
Depression: 12 Month PHQ-9 Follow Up	Depression: Follow Up (12 Months)
Depression: 12 Month Remission	Depression: Feel Better (12 Months)
Depression: 12 Month Response	Depression: Improved Symptoms (12 Months)
Depression: PHQ-9 Utilization	Depression: Assessing Symptoms
Follow-up Care for Children Prescribed ADHD Medication	Attention Deficit Hyperactivity Disorder (ADHD)
Maternity Care: Primary C-Section	Maternity - Cesarean Deliveries
Optimal Asthma Control - Adults	Asthma: Adults
Optimal Asthma Control - Children	Asthma: Children
Optimal Diabetes Care	Diabetes: Adults
Optimal Vascular Care	Vascular Care
Use of Spirometry Testing in the Assessment of COPD	Chronic Obstructive Pulmonary Disease (COPD)
Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening	Mental Health Screening: Teens
Pediatric Preventive Care: Overweight Counseling	Overweight Counseling: Children

We hope you'll visit MNHealthScores.org and recommend it as a resource to your patients and other community members.
