## Introduction

The Minnesota Department of Commerce regulates the financial services industries and promotes and implements energy and telecommunications policies. We work with other state agencies to provide education, information and programs to the public and work to enhance Minnesota's environment and quality of life. This report is one tool in that effort.

Minnesota's electricity and natural gas use occurs through service provided by investor-owned, cooperative, municipal and private utilities. To track usage trends, the Minnesota Department of Commerce collects data from Minnesota's electric and natural gas utilities pursuant to the Minnesota Rules parts 7610.0100 to 7610.1130. The *Minnesota Utility Data Book (or Data Book)* is a compilation of some of that information.

The 2012 *Minnesota Utility Data Book* provides aggregate information reported by Minnesota utilities through 2012. It also provides data reported by individual companies for the year 2012.

The tables in the Data Book may use certain assumptions that are not obvious to the reader. Where feasible, this report lists assumptions at the end of tables or in the General Notes on Data section.

If you have any questions about the report, please contact Lerma La Plante at 651-539-1827.

We hope that the 2012 *Minnesota Utility Data Book* will promote discussion, inquiries and interest about energy consumed through Minnesota's natural-gas and electric utilities. To obtain this report in an alternative format (i.e., large print, Braille, CD-ROM), please see our website at <http://www.commerce.state.mn.us> or call our Energy Information Center at 651-539-1886. If you are outside the Twin Cities area, please dial 1-800-657-3710. Our TAM toll free number is 1-800-657-3599. The Information Center may also be contacted through e-mail at: [energy.info@state.mn.us](mailto:energy.info@state.mn.us).

## Section I: Electric Utilities

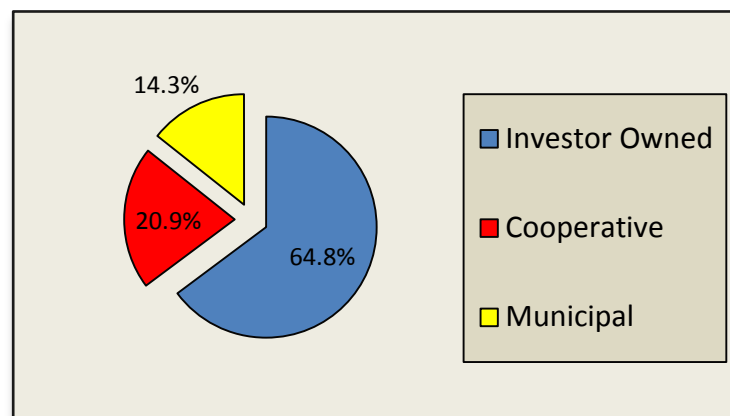

### Overview

Minnesota's electric utilities are classified as investor-owned utilities (IOUs), cooperative utilities (co-ops), or municipal utilities (munis). The Minnesota Public Utilities Commission regulates the rates of all IOUs. Co-ops' and munis' rates are not regulated by the state unless they choose such regulation. (Dakota Electric Association is the only utility that has chosen such regulation.) Instead, "municipal utilities are presently effectively regulated by the residents of the municipalities which own and operate them, and cooperative electric associations are presently effectively regulated and controlled by the membership under the provisions of chapter 308A" (Minn. Stat. §216B.01).

### Types of Electric Utilities

There are five investor-owned electric utilities serving customers in Minnesota. In 2012 there were 47 distribution cooperatives and 125 municipal electric utilities serving customers in Minnesota. Figure 1, below, shows that, of the electricity sold to retail customers by electric utilities, Minnesota electric consumers buy about two-thirds of their electricity from IOUs and the remainder is split among co-ops and munis.

Figure 1: Minnesota Electric Consumption by Type of Electric Utility<sup>1</sup>

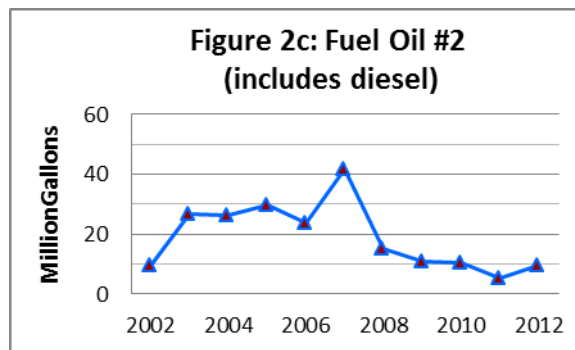

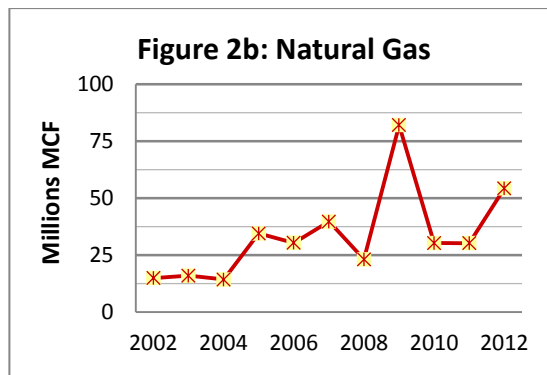

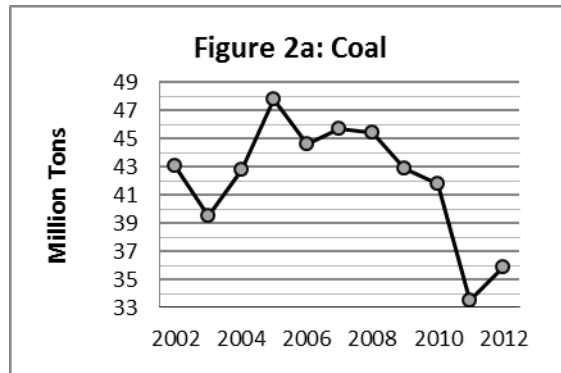

### Fuels Used to Generate Electricity

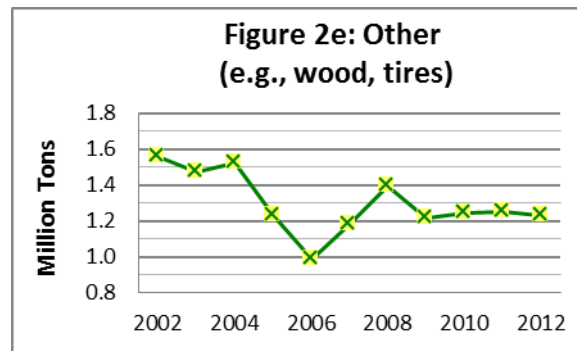

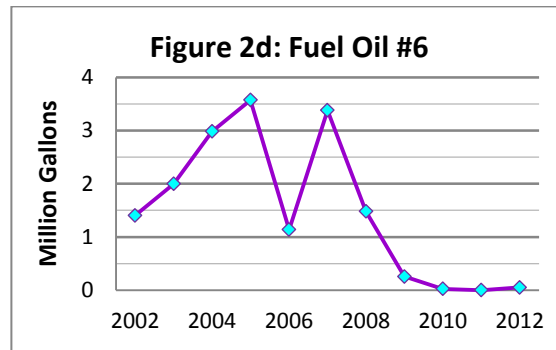

Figures 2a-2e illustrate the consumption of selected fuels (nuclear fuel is excluded) used to generate electricity from plants owned by public utilities serving Minnesota. Each data time series indicates how the use of a particular fuel has changed over the period 2002-2012. The energy derived from a unit of each fuel type is not incorporated into the time series. Therefore, no conclusions should be drawn concerning the relative importance of each fuel in generating Minnesota's electricity.

<sup>1</sup> Based on Tables 1A-1C

Figures 2a-2e: Minnesota Electricity Generation by Selected Fuels, 2002-2012<sup>2</sup>

<sup>2</sup> Based on Table 11 in the 1999-2012 Data Books.

## Introduction to Electric Tables

The tables in this section provide both aggregate and individual company information reported by electric utilities serving Minnesota. Tables 1 through 3 provide overall electric consumption, numbers of electric customers and electric revenues in Minnesota, respectively. These tables also show this information for the general types of companies: investor-owned utilities, cooperative utilities, and municipal utilities. According to Table 1, 2012 electric consumption in the residential sector was slightly lower than 2011 consumption. As Figure 3 indicates, residential customers' electricity use is generally increasing over time, even when usage is adjusted for weather impacts. However, at an average of 10.12 megawatt hours per customer over the year, 2012 residential consumption is slightly lower than the peak average of 10.27 megawatt-hours per customer reached in 2006.

**Figure 3: Weather-Normalized Electric Use per Residential Customer<sup>3</sup>**

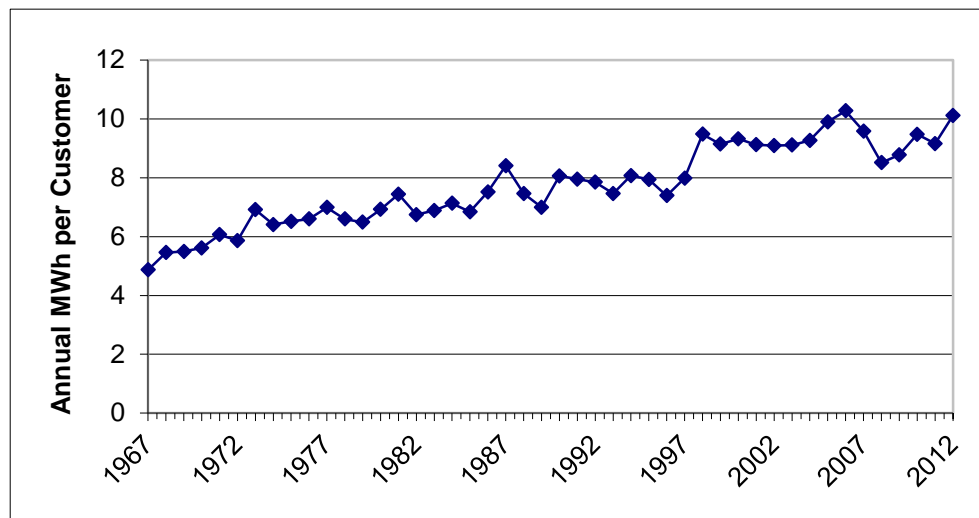

Table 4 through Table 8 provide 2012 electric consumption, numbers of electric customers, electric revenues, average retail prices of electricity per megawatt and data on residential space heating reported by each electric utility serving Minnesota. Table 9 lists utility megawatt-hours sold at retail to Minnesota customers by county and each county's consumption and population rank (1 represents the highest total consumption/population and 87 represents the lowest).

Table 10 contains general descriptions of utility-owned generation plants serving Minnesota during the 2012 calendar year.

<sup>3</sup> Based on Tables 1 and 2, and heating and cooling degree days information from the National Oceanic and Atmospheric Administration (NOAA). See [http://www.cpc.ncep.noaa.gov/products/analysis\\_monitoring/cdus/degree\\_days/](http://www.cpc.ncep.noaa.gov/products/analysis_monitoring/cdus/degree_days/).

Table 11, the final electric utility table, provides net generation and fuel consumption for utility-owned generation plants producing energy during calendar year 2012. Tables 10 and 11 include the following utilities:

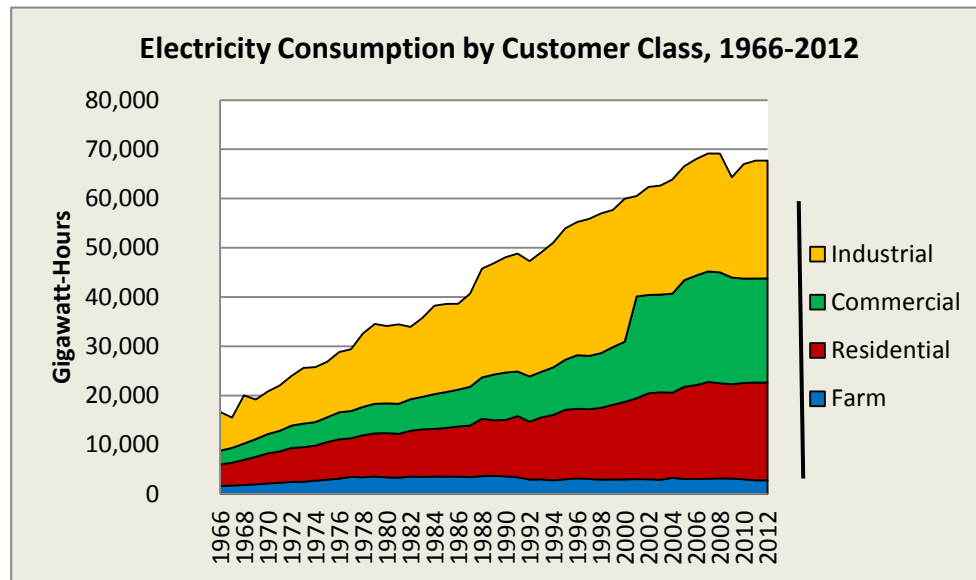

Adrian Public Utilities	Minnesota Municipal Power Agency
Alexandria Light & Power	Minnesota Power
Alliant Energy-Interstate Power Co.	Minnkota Power Cooperative
Austin Utilities	Moorhead Public Service
Benson Municipal Utilities	Moose Lake Water and Light Comm.
Blooming Prairie Public Utilities	Mora Municipal Utilities
Blue Earth Light & Water Dept..	New Prague Utilities Commission
Dairyland Power Cooperative	New Ulm Public Utilities
Delano Municipal Utilities	Nobles Cooperative Electric
East Grand Forks Water & Light Dept.	North Branch Water & Light
Elk River Municipal Utilities	Otter Tail Power Company
Fairfax Municipal	Preston Public Utilities
Federated Rural Electric Association	Princeton Public Utilities
Glencoe Light & Power Commission	Redwood Falls Public Utilities
Grand Marais Public Utilities	Rochester Public Utilities
Granite Falls, City of	St. Charles Light and Water
Great River Energy	St. James Municipal Light & Power
Halstad Municipal Utility	Sleepy Eye Public Utility
Hastings, City of	Southern MN Municipal Power Agency
Hibbing Public Utilities Commission	Spring Valley Public Utilities Comm
Hutchinson Utilities Commission	Steele-Waseca Cooperative Electric
Janesville Municipal Utility	Thief River Falls Municipal Utilities
Kenyon Municipal Utilities	Two Harbors, City of
Lake Crystal Municipal Utilities	Virginia Dept. of Public Utilities
Lakefield, City of	Wells Public Utilities
Lanesboro Public Utilities	Westbrook Public Utilities
Litchfield Public Utilities	Willmar Municipal Utilities
Luverne, City of	Windom Municipal Utility
Madelia Municipal Light & Power	Worthington Public Utilities
Marshall Municipal Uilities	Xcel Energy
Melrose Public Utilities	

## Table 1: Minnesota Historical Electric Consumption

Table 1 presents consumption data for Minnesota electric utilities by customer class from 1984-2012. Tables 1A-1C show the same information for IOUs, Coops, and Munis.

The long-term trend in electricity consumption in Minnesota has been upward, as Figure 4 below shows. The apparent jump in Commercial customer class electric consumption and accompanying reduction for the Industrial class in 2001 is largely the effect of Xcel Energy's redefinition in 2001 of the criteria for those two customer classes. About 6,000 customers moved from the Industrial to the Commercial class as a result of the redefinition.

Figure 4

### Notes for Table 1 through Table 1C – Minnesota Historical Electric Consumption

\*For 1995, Barnesville Municipal Electric reported total consumption, but not consumption by customer class.

^Xcel Energy redefined its commercial and industrial customer classifications in 2001. The new standards for the classes are:

Commercial = Small Commercial and Industrial requiring less than 1000 kW.

Industrial = Large Commercial and Industrial requiring at least 1000 kW.

**Table 1: Minnesota Historical Electric Consumption**

Total Electric Consumption for Minnesota (Gigawatt-Hours)

Year	Farm	Non-Farm Residential	Commercial	Industrial	Total
1965	1,526	4,036	2,552	4,804	12,917

**Table 2: Number of Minnesota Electric Customers**

Table 2 presents customer number data for Minnesota electric utilities by customer class from 1985-2012. Tables 2A-2C show the same information for IOUs, Coops, and Munis.

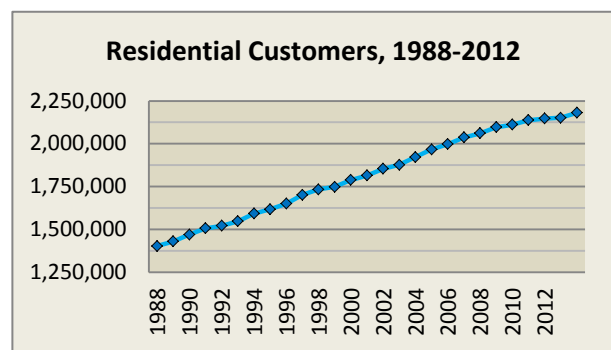

Other than the customer class designated as “Farm,” customer class proportions have remained relatively stable over the years.

**Figures: Number of Minnesota Electric Customers by Customer Class**

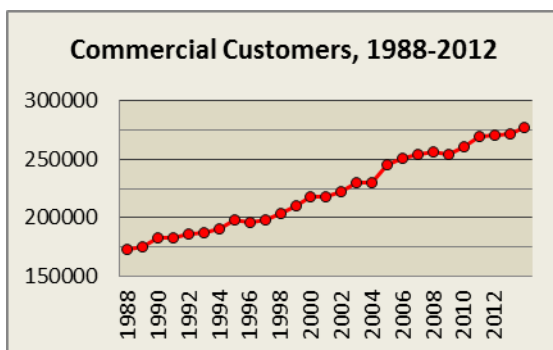

**Figure 5a**

**Figure 5b**

**Figure 5c**

**Figure 5d**

**Notes for Table 2 through Table 2C – Number of Minnesota Electric Customers**

^Xcel Energy redefined its commercial and industrial customer classifications in 2001. The new standards for the classes are:

Commercial = Small Commercial and Industrial requiring less than 1000 kW.

Industrial = Large Commercial and Industrial requiring at least 1000 kW.

**Table 2: Number of Minnesota Electric Customers**

**Table 3: Minnesota Electric Sales Revenue**

Table 3 presents revenue data for Minnesota electric utilities by customer class from 1984-2012. Tables 3A-3C show the same information for IOUs, Coops, and Munis.

Figure 6 below shows the percentage of total revenue that Minnesota electric utilities received from each customer class from 1986-2012.<sup>4</sup> The Non-Farm Residential class has grown from about 30 percent to approximately 37 percent of the total over this span. Meanwhile, the Farm class has dropped from about 11 percent to around 5 percent. The chart also indicates that the Commercial class has grown substantially, while the Industrial share has fallen. However, most, or all, of this change occurred in 2001 when Xcel Energy redefined those customer classes, causing about \$400 million to shift from the Industrial to the Commercial class. The combined percentage of the two classes has been in the range of 58-60 percent over the period covered.

**Figure 6**

<sup>4</sup> Based on Table 3.

### **Notes for Table 3 through Table 3C**

^Xcel Energy redefined its commercial and industrial customer classifications in 2001. The new standards for the classes are:

Commercial = Small Commercial and Industrial requiring less than 1000 kW.

Industrial = Large Commercial and Industrial requiring at least 1000 kW.

\* Customer class total amounts in Table 3 and Table 3C do not sum to the overall total amounts because Two Harbors Municipal did not provide revenue by customer class. Two Harbors' total revenue is included in the overall totals in the two tables.

**Table 4: Minnesota Electric Consumption by Utility**

The Minnesota 2012 consumption percentages by customer class for each utility type are shown in Figure 7 below. Please note that many utilities have eliminated the “Farm” class as a separate category. Farm customers for those utilities are included in the Residential or Commercial classes.

**Figure 7**

**Note for Table 4: Minnesota Electric Consumption by Utility**

## ***Minnesota Electric Consumption by County***

The ten Minnesota counties with the highest electricity consumption in 2012 are:

<b>County</b>	<b>MWh</b>	<b>Population Rank</b>
Hennepin	13,061,859	1
St. Louis	7,893,491	6
Ramsey	5,300,397	2
Dakota	4,988,314	3
Anoka	2,701,019	4
Washington	2,337,846	5
Steams	1,854,244	7
Olmstead	1,491,807	8
Scott	1,324,463	9
Wright	1,010,380	10
Total	41,963,820	
Minnesota Total	66,854,762	

These same ten counties also were the ten most populated counties in Minnesota in 2012. They had 62.8 percent of the state's residents.

Table 9 on the next page lists Minnesota's 87 counties in alphabetical order. The table also includes total MWh consumed in the county in 2012, the consumption rank for the county (1 is highest, 87 is lowest), and the county's population rank.

**Table 9: Minnesota Electric Consumption by County**

Minnesota Electric Consumption in 2012

County	MWH	Consumption Rank*	Population Rank*
Aitkin	132,815	71	53
Anoka	2,701,019	5	4
Becker	432,292	32	33
Beltrami	542,563	23	22
Benton	537,871	36	25
Big Stone	70,286	85	82
Blue Earth	861,222	12	14

Notes for Table 11

\* Net generation values of zero indicate less than one MWh of production; however, values are included in the Public Utility Total.

Negative net generation values indicate that the station electric consumption exceeded the gross generation of the plant. However, these plants did produce positive amounts of energy during the year.

\*\* Natural gas includes small amount of methane gas.

\*\*\* Fuel Oil #2 includes Diesel Fuel.

\*\*\*\* "Other fuels" include wood, wood by-products, tire- and refuse-derived fuel.

## Section II: Natural Gas Utilities

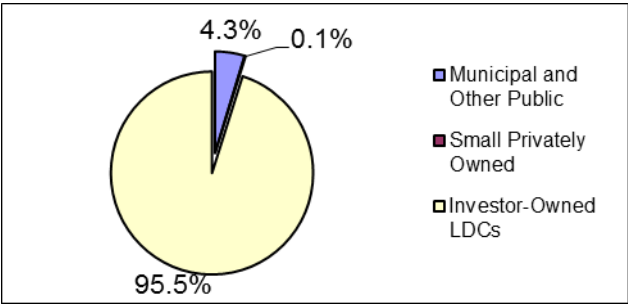

### Overview

Natural gas companies in Minnesota are owned both privately and publicly. These distribution companies deliver gas to customers, regardless of whether the utility or a third party<sup>5</sup> purchases the gas for the customer. The Minnesota Public Utilities Commission regulates the rates of large privately owned local distribution companies (LDCs). The Commission generally does not regulate rates of publicly owned utilities. The Commission also does not regulate rates of privately owned LDCs that are smaller than a legislatively set threshold.

### Types of Natural-Gas Utilities

In 2012 there were seven investor-owned local distribution companies serving customers in Minnesota. There also were five small privately owned and 29 municipal gas utilities serving Minnesota customers. As Figure 8 below shows, LDCs distribute a great majority of Minnesota’s natural gas.

Figure 8: Natural Gas Throughput Reported by Type of Utility<sup>6</sup>

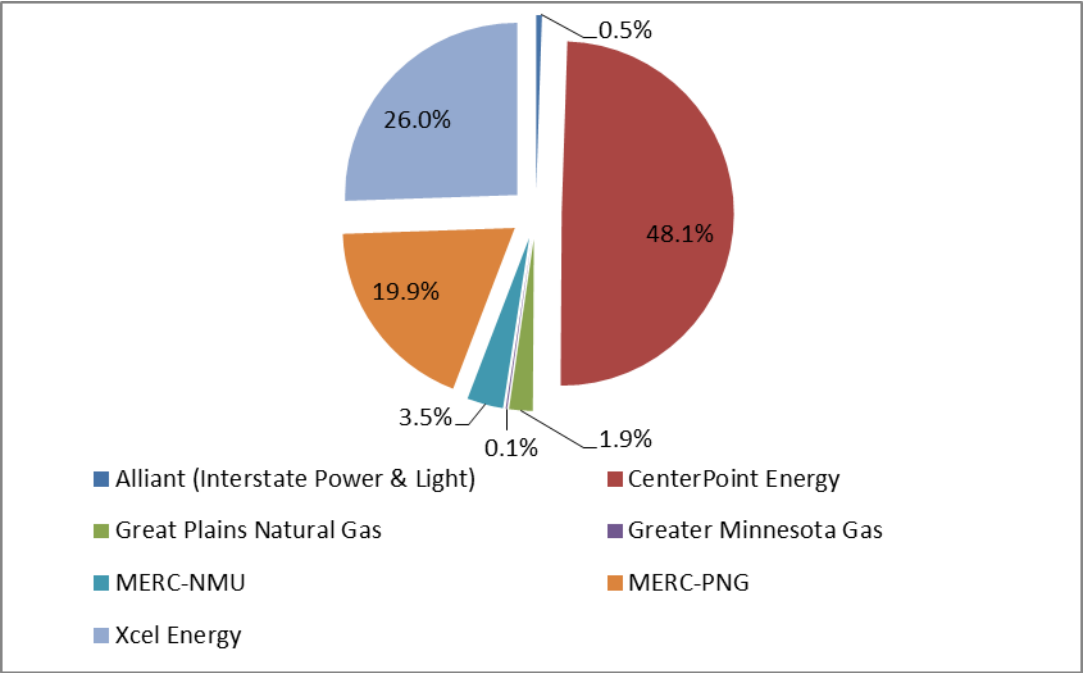

<sup>5</sup> Certain customers can purchase natural gas supplies from companies that are not regulated by state authorities. However, these customers must still transport the gas through their state-regulated local natural gas companies.

<sup>6</sup> See Table 14 for consumption by company.

**Relative Size of Regulated Utilities**

As Figure 9 shows, CenterPoint Energy is the largest of the regulated, investor-owned utilities, followed by Xcel Energy and Minnesota Energy Resources Corp-PNG. The regulated, investor-owned company with the smallest Minnesota consumption in 2012 was Greater Minnesota Gas Inc.

Figure 9: Regulated Investor-Owned LDCs’ Percentages of Total Type Consumption

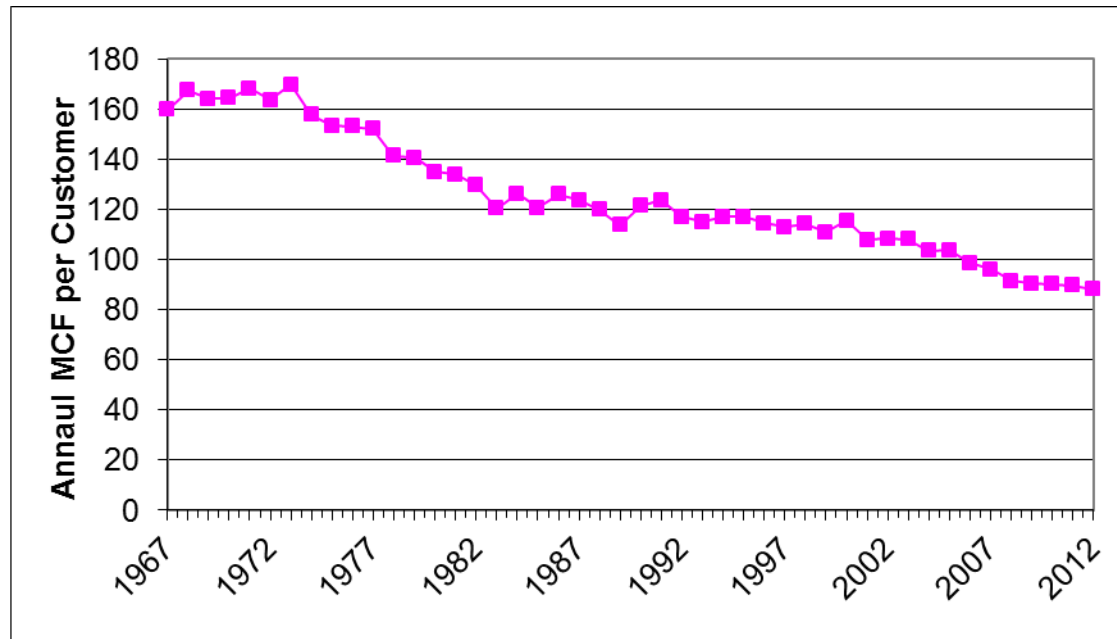

## Introduction to Natural Gas Tables

The tables in this section provide both aggregate and individual company information reported by natural gas companies serving Minnesota. Tables 12 and 13 provide overall natural gas consumption and numbers of natural gas customers in Minnesota.

Tables 14 and 15 provide natural gas consumption and numbers of natural gas customers reported by each natural gas company serving Minnesota in 2012. Table 16 provides revenues reported by the natural gas companies.

Table 12 indicates that 2012 consumption of natural gas in the residential sector was 14 percent lower than 2011 consumption. As Figure 10 below indicates, residential consumption of natural gas on a weather-normalized basis has declined since 1973.

**Figure 10: Weather-Normalized Natural Gas Use per Residential Customer**

**Table 12: Total Minnesota Historical Natural Gas Consumption**

Minnesota Natural Gas Consumption (1,000 MCF)

Notes for Table 12

\*Electric Generation is included in Industrial prior to 1999.

\*\* Some natural gas customers can purchase gas supplies from unregulated natural gas suppliers and transport this gas through regulated utilities' systems. Deliveries to Transportation was reported as a separate category starting with 1987.

\*\*\* Figures for some categories may not equal the corresponding figures in Table 14 due to reporting discrepancies.

Notes for Table 16

^ The categories shown capture natural gas sales and transportation revenues.

^^ May include electric generation.

\* Withheld to avoid disclosure of individual customer information. Data included in totals

## Section III: Attachments

### ***General Notes on Data***

- 1) **Consumption.** In general, electric companies report retail electric consumption as follows:

Farm. Electricity supplied to farm households and for agricultural purposes.

Residential. Electricity supplied to non-farm private households.

Commercial. Electricity supplied to small commercial and industrial power accounts. May include use by some apartment dwellers.

Industrial. Electricity supplied to large commercial and industrial power accounts, including mining accounts.

- 2) **Missing Data.** Although all utilities are required to report data used in this report annually, some utilities have provided either partial information or no information. In some places, this report notes where these utilities have not reported information. In other places, for the general purpose of comparing 2012 data to previous years' data, this report shows the most recent comparable data for non-reporting companies.

- 3) **Accuracy of Data.** While the Department does not audit the records supporting the data companies provide, we do check the reasonableness of the data. We also correct errors in reported data where feasible. However, some data reported by smaller companies may contain a few errors or inconsistencies. These errors should not significantly affect the totals.

## ***Glossary of Terms and Abbreviations***

**Btu:** British thermal unit; the amount of heat required to raise the temperature of one pound of water one degree Fahrenheit under stated conditions of pressure and temperature (equal to 252 calories, 778 foot-pounds, 1,005 joules and 0.293 watt-hours). It is the U.S. customary unit of measuring the quality of heat, such as the heat content of fuel.

**cf:** cubic foot; the U.S. customary unit of measurement of gas volume. It is the amount of gas required to fill a volume of one cubic foot under stated conditions of temperature, pressure and water vapor. One cubic foot of natural gas equals 1,000 British thermal units under standard conditions of atmosphere (one) and temperature (60 degrees Fahrenheit).

**Ccf:** one hundred cubic feet.

**Cooperative utility:** a utility owned and operated by its members.

**Department or DOC:** the Minnesota Department of Commerce.

**Gas turbine:** a type of electric generation plant that relies on turbines driven by the combustion of natural gas or diesel fuel to produce electricity.

**GWh:** gigawatt-hour; the unit of energy equal to that expended in one hour at a rate of one billion watts. One GWh equals 1,000 megawatt-hours.

**Hydro:** a type of electric generation plant that relies on a water wheel to convert falling water into electricity.

**Int. comb. (Internal Combustion):** a type of electric generation unit that relies on an internal combustion engine to convert burned diesel, fuel oil, gasoline, or natural gas into electricity.

**Investor-owned utility (IOU):** Common term for an electric privately-owned utility regulated by the Minnesota Public Utilities Commission.

**kW:** one kilowatt or one thousand watts.

**Local Distribution Company (LDC):** Common term for a gas privately-owned utility regulated by the MPUC.

**Mcf:** one thousand cubic feet; a unit of measure of gas volume.

**Minnesota Public Utilities Commission (Commission):** the state agency with regulatory jurisdiction over certain Minnesota utilities.

**MWh:** megawatt-hour; the unit of energy equal to that expended in one hour at a rate of one million watts. One MWh equals 3,414,000 Btus.

**Natural Gas (gas):** a mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with crude oil in natural underground reservoirs. It comes from the ground with or without crude oil and is generally much higher in heat content than manufactured gas.

**Net generation:** the total amount of electric energy produced by a generating unit less the electricity consumed by the generating station.

**Nuclear:** a type of electric generation plant that uses energy obtained by fission, fusion or by radioactive decay to drive the turbines.

**Number 2 fuel oil:** a distillate fuel oil used for domestic heating and in moderate capacity commercial or industrial burners as well as for generating electricity.

**Number 6 fuel oil:** a residual fuel oil that is heavier than distillate fuel oil and is used to generate electricity as well as in industrial burners.

**Plant capacity:** the amount of electric load, measured in megawatts or kilowatts, for which a generating unit is rated either by the user or the manufacturer.

**Privately owned utilities:** utility corporations owned by shareholders. Large privately-owned utilities are regulated by the Minnesota Public Utilities Commission.

**Publicly owned utilities:** utilities owned, operated and regulated by the city or legal entity in which it resides.

**REIS:** Regional Energy Information System; the Minnesota Department of Commerce's state energy data collection and information system authorized by Minnesota Statutes section 216C.10 and conducted pursuant to Minnesota Rules Chapter 7610.

**RDF:** refuse-derived fuel, composed of garbage, that is used in some electric generation plants.

**Steam:** a type of electric generation plant that relies on steam-driven turbines to generate electricity. Steam is produced in a boiler heated by several combinations of fossil, refuse-derived, or wood-waste fuels.

**Transportation (of natural gas):** the action taken by a retail customer who purchases natural gas supplies directly from a supplier or marketer and then moves or transports the gas through a utility's distribution system to the customer's destination.

**Watt:** the unit of measure for electric power or rate of doing work. The rate of energy transfer equivalent to one ampere flowing under pressure of one volt.

**Weather-normalized information:** information adjusted to remove fluctuation due to changes in weather.
