2018 FIRE IN MINNESOTA

STATE FIRE MARSHAL

The mission of the State Fire Marshal Division is to protect lives and property by fostering a fire-safe environment through investigation, enforcement, regulation, data collection and public education.

FIRE IN MINNESOTA

The Minnesota Department of Public Safety State Fire Marshal Division

Statistical data pertaining to all fire-related incidents
in the state of Minnesota for the year 2018.

This report is also available as a PDF at sfm.dps.mn.gov

Introduction from State Fire Marshal Bruce West	2

2018 STATISTICS

Total Impact

Minnesota fire clock	4
Overall state totals	5
Structure fires by property type	7
Sprinkler saves	9

Causes

Structure fire causes	13
Where do fires start?	14
Incendiary fires	17–19

Casualties

Fire death history	21
Feature article: Fire deaths: People, not numbers	22–23
Smoke alarm performance	24
Civilian deaths	27–28
Firefighter deaths and injuries	30–31
Fireworks injuries and property loss	32–33

Participation

Runs, dollar loss and deaths by county	35–37
Fire department responses and dollar loss reported via MFIRS	38–58

Fire in Minnesota 2018 highlights

- Store and office property dollar loss went up over 200 percent from last year.
 - There was one \$4.5 sorting facility fire and one \$3.8 multi-commercial fire.
- Incendiary fires were at their lowest at 730 — a 30 percent decrease from 2017.
- Alcohol or drug use was a factor in 49 percent of all fire deaths in 2018.
- The number of structure (building) fires is similar to recent past years.
- Total dollar loss from fire is similar to recent past years.
- Overall fire department responses are up.
- Mutual aid responses are up.

From the State Fire Marshal

Welcome to the 2018 Fire in Minnesota Report, which includes data provided by more than 99 percent of Minnesota's fire departments.

If you pay close attention to these reports, you may have already noticed a trend: Some of the data in key categories — the number of structure fires and the total dollar loss from fire, for example — hardly varies. When it comes to fire deaths, change is obviously welcome. We want those numbers to drop. And that's what happened in 2018.

But what about the other numbers? I was recently reading a medical report where the doctor described his examination of the patient's area of pain as "unremarkable." In the medical world, this often means that the condition is unlikely to be noticed or is very common or ordinary. In many ways, Fire in Minnesota 2018 is "unremarkable" — or is it?

While the number of fires and fire loss is very similar to recent past years, there is nothing ordinary or "unremarkable" if one of these fires impacted you or a member of your family. We talk about that in some detail in the section on fatalities (see pages 22 and 23). There is nothing ordinary about the number of firefighters and investigators who have developed cancer.

If fires continue at their present and apparently "ordinary" rate, we are not doing enough in terms of fire prevention. Sure, we have dramatically reduced fire deaths and the number of catastrophic fires over the years. But have we now decided that we have done enough and that fire is simply an "unremarkable" or "ordinary" event? I hope not.

I hope you look at these seemingly ordinary numbers and they motivate you to make change in your community. Minnesotans deserve remarkable, not unremarkable, service from us all.

Thank you,

A handwritten signature in black ink that reads "Bruce West". The signature is fluid and cursive, with a long horizontal stroke extending to the right.

Bruce West
State Fire Marshal

bruce.west@state.mn.us

A photograph of a campfire at night. Bright yellow and orange flames rise from a log in the center. Several patterned blankets are draped over the fire for warmth. The scene is dimly lit, with the fire providing the primary light source. A large, semi-transparent red shape covers the top portion of the image, with a thin gold border separating it from the rest of the photo. The text 'TOTAL IMPACT' is centered over the fire.

IMPACT**

MINNESOTA FIRE CLOCK

Frequency of Responses as Reported 2018

These figures represent the collective incidents reported by 771 of Minnesota's 776 fire departments.

One Fire Department Response

One Fire Reported

One EMS/Rescue Run Reported

One Structure Fire Reported

One Rural Structure Fire

One Metro Structure Fire

One Arson Fire Reported

Fire Loss in Minnesota

\$ 613,316 / Day

\$ 26,180 / Hour

\$ 436 / Minute

In 2018, 771 of the state's 776 fire departments (99 percent of all Minnesota's fire departments) reported through the Minnesota Fire Incident Reporting System (MFIRS), which collects information on fires and related activities. More information about fire department participation begins on page 35.

The total number of fire incidents reported by participating Minnesota fire departments in 2018 was 12,929 — a 4 percent decrease from 2017. The number of responses by the fire service increased by 2 percent in 2018 to almost 310,000 (309,652).

2018 REPORTED FIRE DEPARTMENT RESPONSES					
Incidents Reported	Seven County Metro Area	% State Total	Balance of State	% State Total	State Total
Structure Fires	3,473	57	2,657	43	6,130
Vehicle Fires	1,225	47	1,371	53	2,596
Other Fires	1,732	41	2,471	59	4,203
TOTAL FIRES	6,430	50	6,499	50	12,929
Rescue/EMS Calls	132,951	68	63,220	32	196,171
False Calls	19,457	72	7,751	28	27,208
Mutual Aid Given	2,829	44	3,556	56	6,385
Other Incidents	42,886	64	24,073	36	66,959
TOTAL CALLS	204,553	66	105,099	34	309,652
ESTIMATED DOLLAR LOSS DUE TO FIRE	\$95,286,159	42%	\$134,049,176	58%	\$229,335,335

Total dollar loss increased by over \$5 million (2 percent) from 2017. Among the calls that increased in 2018 were rescue/EMS calls, good intent calls and hazardous conditions calls.

Structure fires continue to occur most frequently in residential property, including houses, apartments, boarding houses, dorms, hotels/motels, etc. In each of the last five years, an average of 4,691 fires have occurred in residential structures. These figures indicate that each year, one residential structure fire occurs for every 1,174 residents.

STRUCTURE FIRES BY PROPERTY TYPE						
Structure Type	2014	2015	2016	2017	2018	% Change 2017-2018
Residential	4,820	4,675	4,621	4,623	4,714	2%

Residential (other)	131	\$6,109,133	0	1
TOTAL	4,714	\$126,604,701	114	29

Residential fire loss increased by 6 percent while all other building fire loss increased by only 2 percent.

Residential fires accounted for 77 percent of all structure fires and 57 percent of total dollar loss.

The average dollar loss per structure fire in 2018 was over \$36,000 per incident. The average dollar loss per residential structure fire was over \$26,000 per incident.

DOLLAR LOSS BY PROPERTY TYPE

* Includes one \$5 million barn fire.

** Includes one \$4.5 million sorting facility fire and one \$3.8 million multi-commercial fire.

† Includes one \$14 million high school fire.

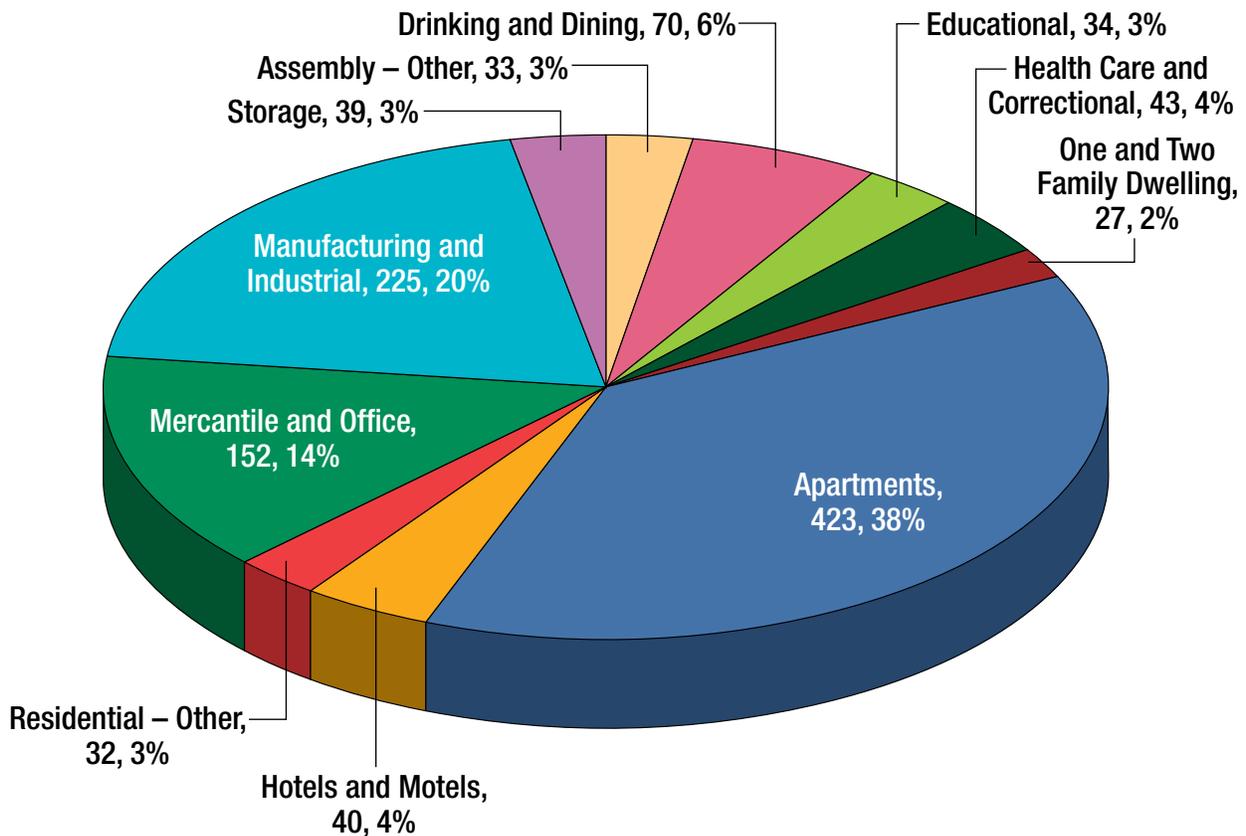

†† Includes one \$5.5 million high school fire.

Sprinkler Saves

There were 97 sprinkler saves in Minnesota in 2018. This represents the second-highest number of fire sprinkler saves in a year since the State Fire Marshal Division started tracking them. This means that once every 3.5 (three-and-a-half) days a fire is extinguished by an automatic fire sprinkler system. These sprinkler activations saved 97 buildings from devastation by fire, minimized property loss, greatly reduced business interruption and potentially saved lives.

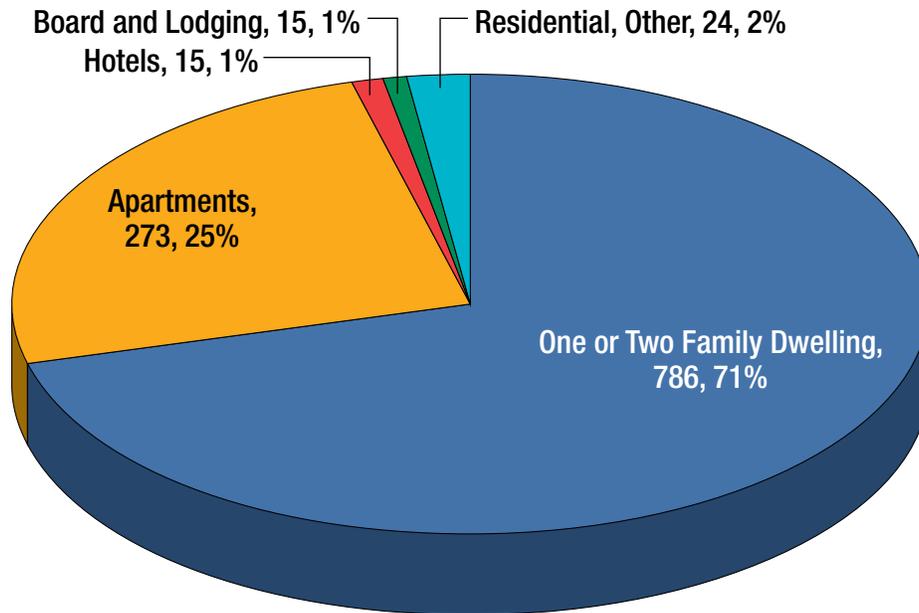

The following chart shows where the 1,118 sprinkler saves have occurred from 2004-2018. Sprinkler systems have been around since the late 1800s; they were originally developed to protect manufacturing and industrial occupancies. The most common occupancy for sprinkler saves in Minnesota is apartment buildings. This is noteworthy as apartments are one of the newest occupancies to have sprinklers. The first fire code in Minnesota to require apartment sprinklers was adopted in 1989 (less than 30 years ago) but apartments have now become the leading type of building to experience sprinkler saves.

**MINNESOTA SPRINKLER SAVES
2004 – 2018**

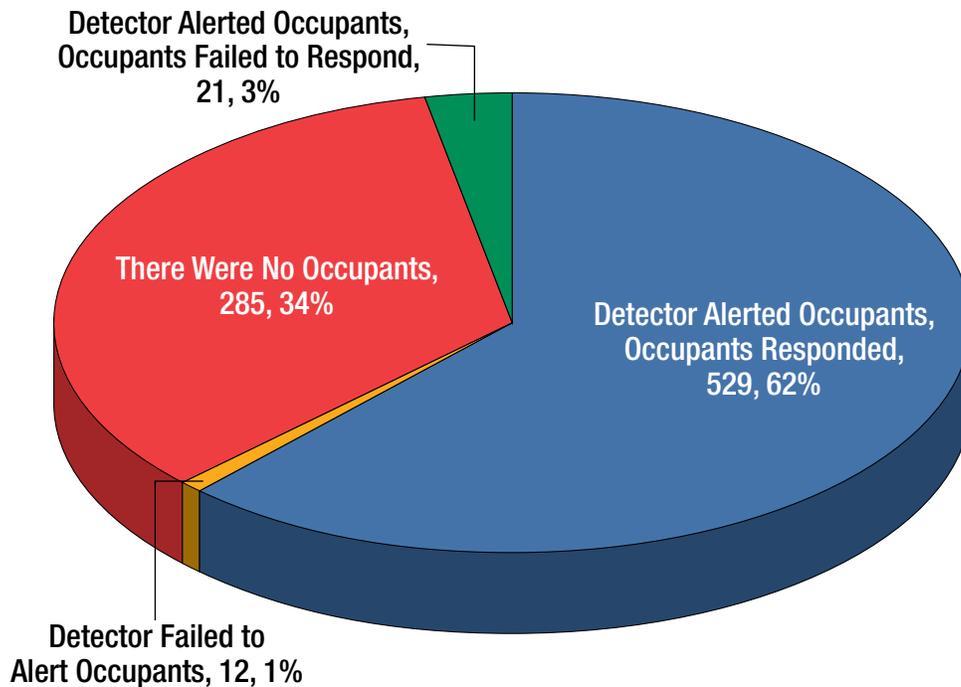

Smoke alarms are highly effective at alerting people of dangerous fire conditions, especially in residential occupancies where people sleep. In a high percentage of the residential fires, the smoke alarms activated and alerted the occupants (62 percent). Of concern, however, are the 33 residential fires last year where the occupants did not get alerted to dangerous fire conditions (shown as alarm failed to alert occupants – 1 percent – or alerted occupants but the occupants failed to respond – 3 percent).

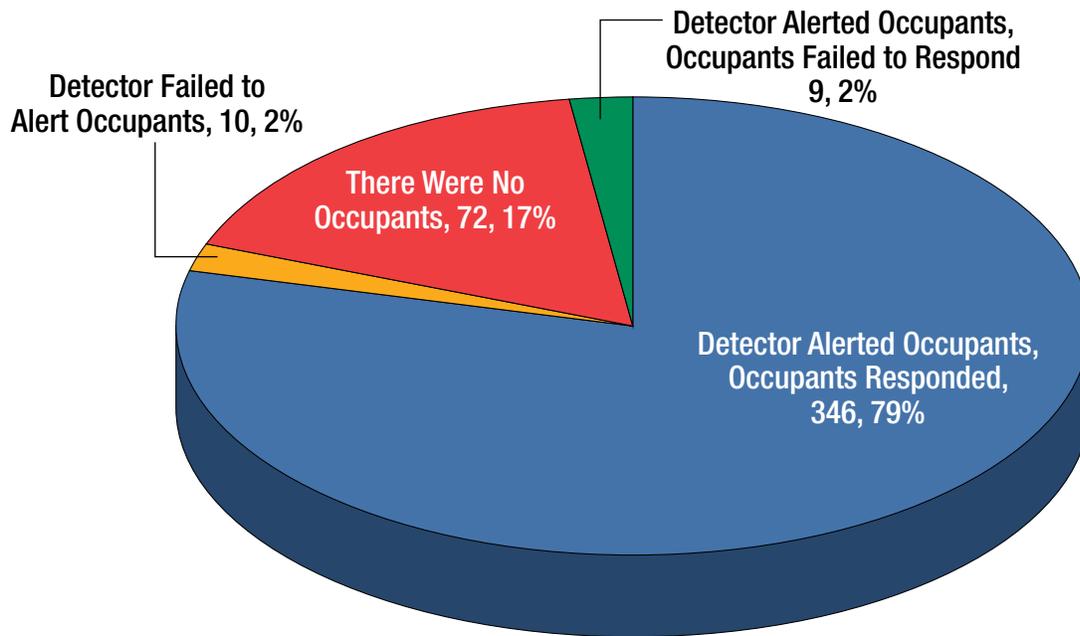

RESIDENTIAL OCCUPANCIES WHERE SMOKE ALARMS ACTIVATED — 2018

SMOKE ALARM EFFECTIVENESS — 2018

ONE/TWO FAMILY DWELLING SMOKE ALARM EFFECTIVENESS — 2018

SUMMARY

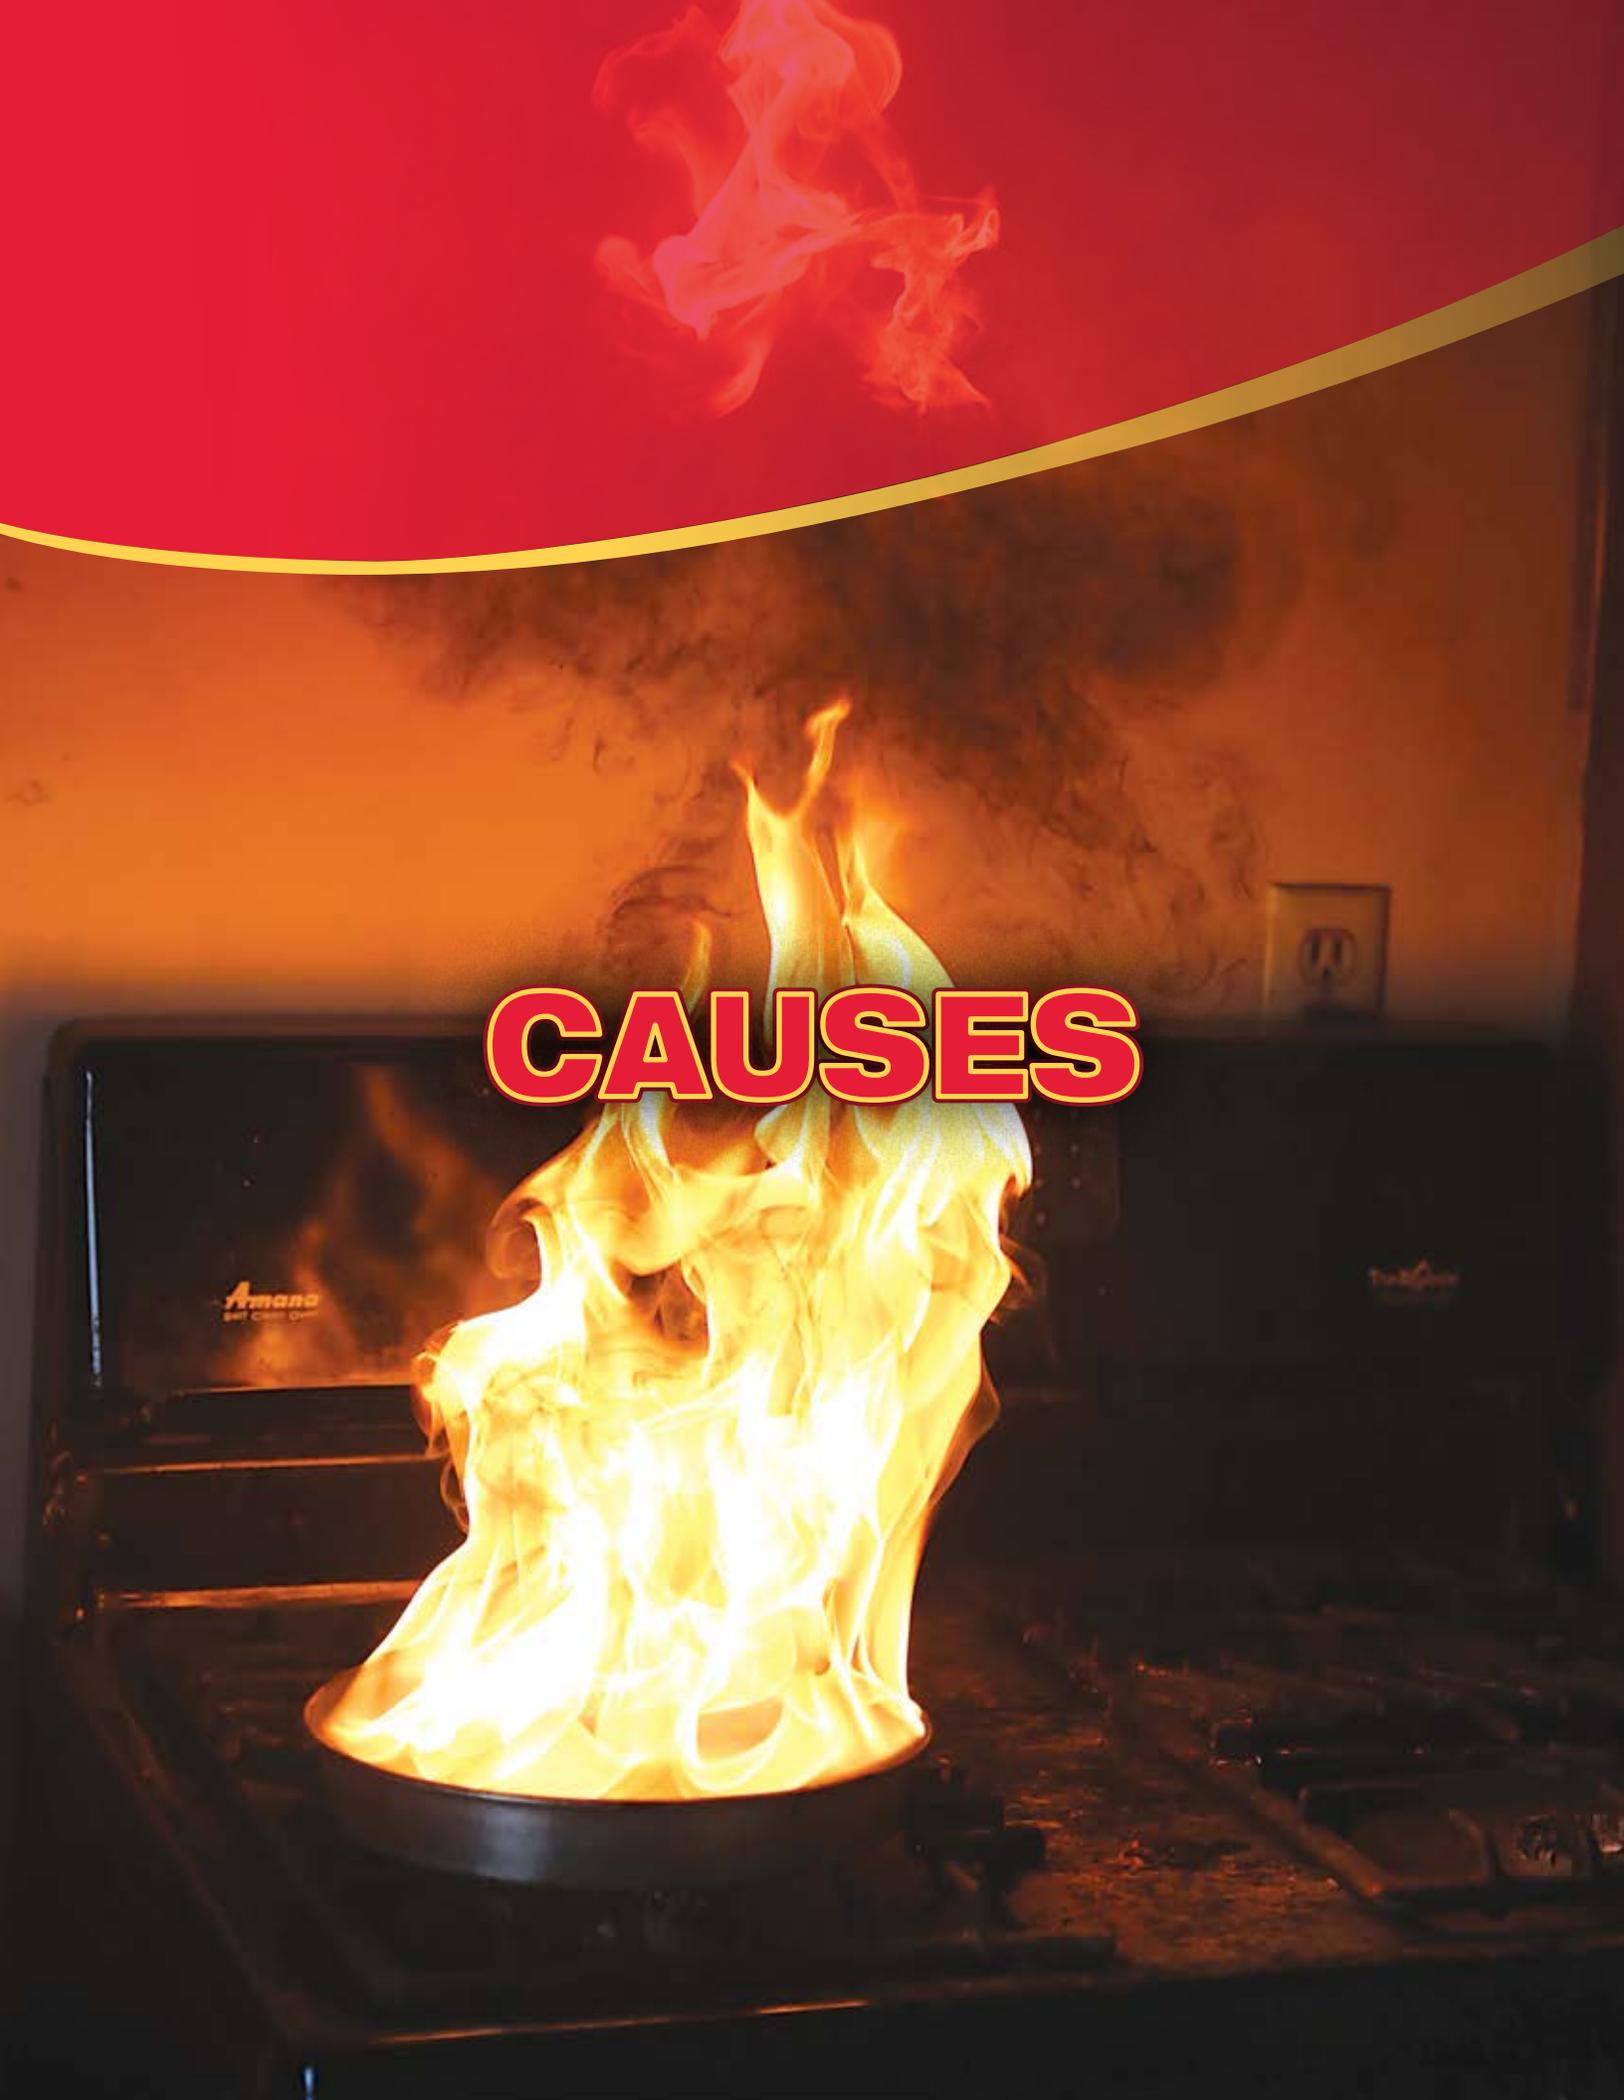

Last year, 771 (99 percent) of Minnesota’s 776 fire departments reported information for Fire in Minnesota.

The total number of calls increased 2 percent from 2017. Dollar loss was over \$229 million.

Fires occurred most frequently in residential properties. Residential fires occurred in significantly higher percentages than fires in the next most reported property type — storage facilities.

Fires in residential buildings accounted for 77 percent of all structure fires, 57 percent of total dollar loss, and in 93 percent of structure fire deaths in 2018. These statistics continue to identify the home as the most dangerous place to be.

In the last 30 years, over \$5 billion in property was destroyed by fire; over \$2.6 billion in damage occurred in residential property.

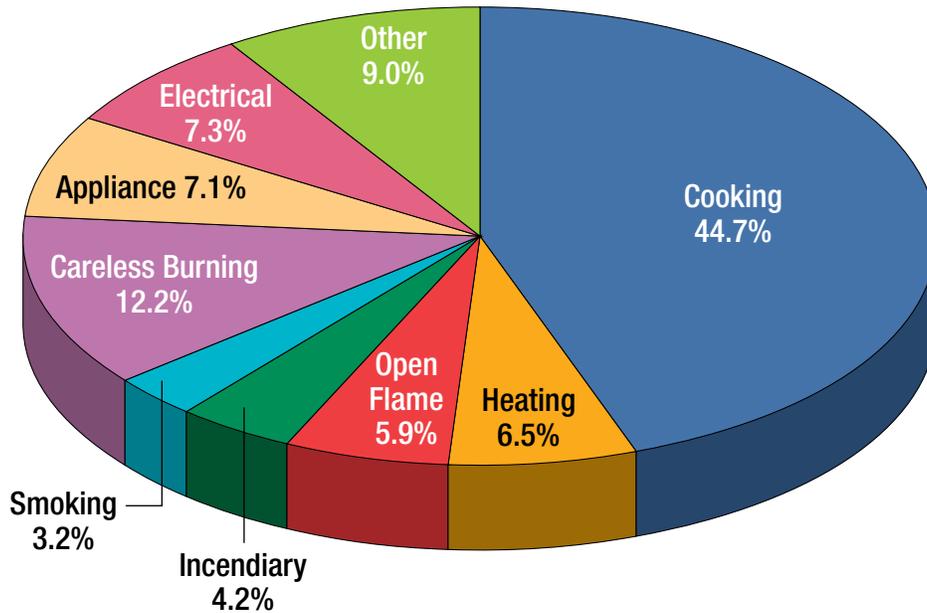

CAUSES

As in past years, cooking continues to be the top known cause of fires, with careless burning and electrical as the second- and third-leading causes.

Cooking remains the leading cause mainly due to contained cooking fires.

Fires in residential property represented 77 percent of all structure fires and 57 percent of the total dollar loss.

STRUCTURE FIRE CAUSES

Cooking Fires

The leading cause of structure fires in 2018 was cooking. Ninety-four percent of those fires were contained cooking fires.

The top three known factors in the remaining cooking fires were: unattended equipment at 25 percent, equipment turned on accidentally/not turned off at 14 percent and combustibles too close at 12 percent. There were three cooking-related civilian fire deaths and 18 civilian injuries, as well as five firefighter injuries. Dollar loss from cooking fires in 2018 totaled \$3,681,350.

Heating Fires

The majority of 2018 heating-related fires (330) occurred in residential properties.

The total number of these fires increased by 29 percent from last year — there were 251 heating-related fires in 2017 — and dollar loss increased by 50 percent.

HEATING FIRES IN RESIDENTIAL PROPERTIES

Equipment	Number of Fire Incidents	% of Total	Dollar Loss	% of Total
Fireplace/Chimney	196	60%	\$3,051,352	64%
Fixed Heating Units	39	12%	\$1,006,006	21%
Portable Heaters	13	4%	\$327,600	7%
Central Heating Units	55	17%	\$59,402	1%
Water Heaters	9	3%	\$114,000	2%
Other	12	4%	\$231,900	5%
TOTAL	324	100%	\$4,790,260	100%

Where Do Fires Start?

Residential Property

- Kitchen/cooking area: 52 percent
- Sleeping area: 5 percent
- Garage: 5 percent
- Balcony/patio: 3 percent
- Other areas of fire origin: 36 percent

Public Assembly Property

- Kitchen/cooking area: 53 percent
- Trash chute/container: 10 percent
- Lavatory/Locker area: 4 percent
- Outside area/other: 4 percent
- Other areas of fire origin: 29 percent

Educational Property

- Kitchen/cooking area: 38 percent
- Trash chute/container: 8 percent
- Lavatory: 5 percent
- Other areas of fire origin: 41 percent

Store and Office Property

- Kitchen/cooking area: 26 percent
- Trash chute/container: 9 percent
- Laundry: 4 percent
- Heating room: 4 percent
- Other areas of fire origin: 57 percent

% OF TOTAL	3%*	3%	3%	0%	0%	14%

* Percent of Structure Fires

SUMMARY

Cooking caused the largest percentage of structure fires. Fires in residential spaces represent 77 percent of all structure fires and 93 percent of fire deaths in structures. While careless smoking accounts for only 3 percent of structure fires, it caused 27 percent of known fire fatalities.

Nine percent of all reported fire causes were listed as “other causes.” In order to focus our fire prevention efforts where the greatest need exists, complete reporting is essential. Fire departments should provide the maximum available information on MFIRS reports.

Minnesotans continue to be in the greatest danger from fire in their own homes. Fire prevention efforts in the areas of cooking, heating, careless smoking and electrical malfunction must continue to be a top priority.

Fire Prevention Week

Since 1925, the week of Oct. 9 has been designated Fire Prevention Week in the United States in memory of the Great Chicago Fire of Oct. 9, 1871. The National Fire Protection Association has sent a special fire-prevention message to the public during Fire Prevention Week. The SFMD urges Minnesota fire departments to implement the safety theme and lead fire prevention efforts in their communities.

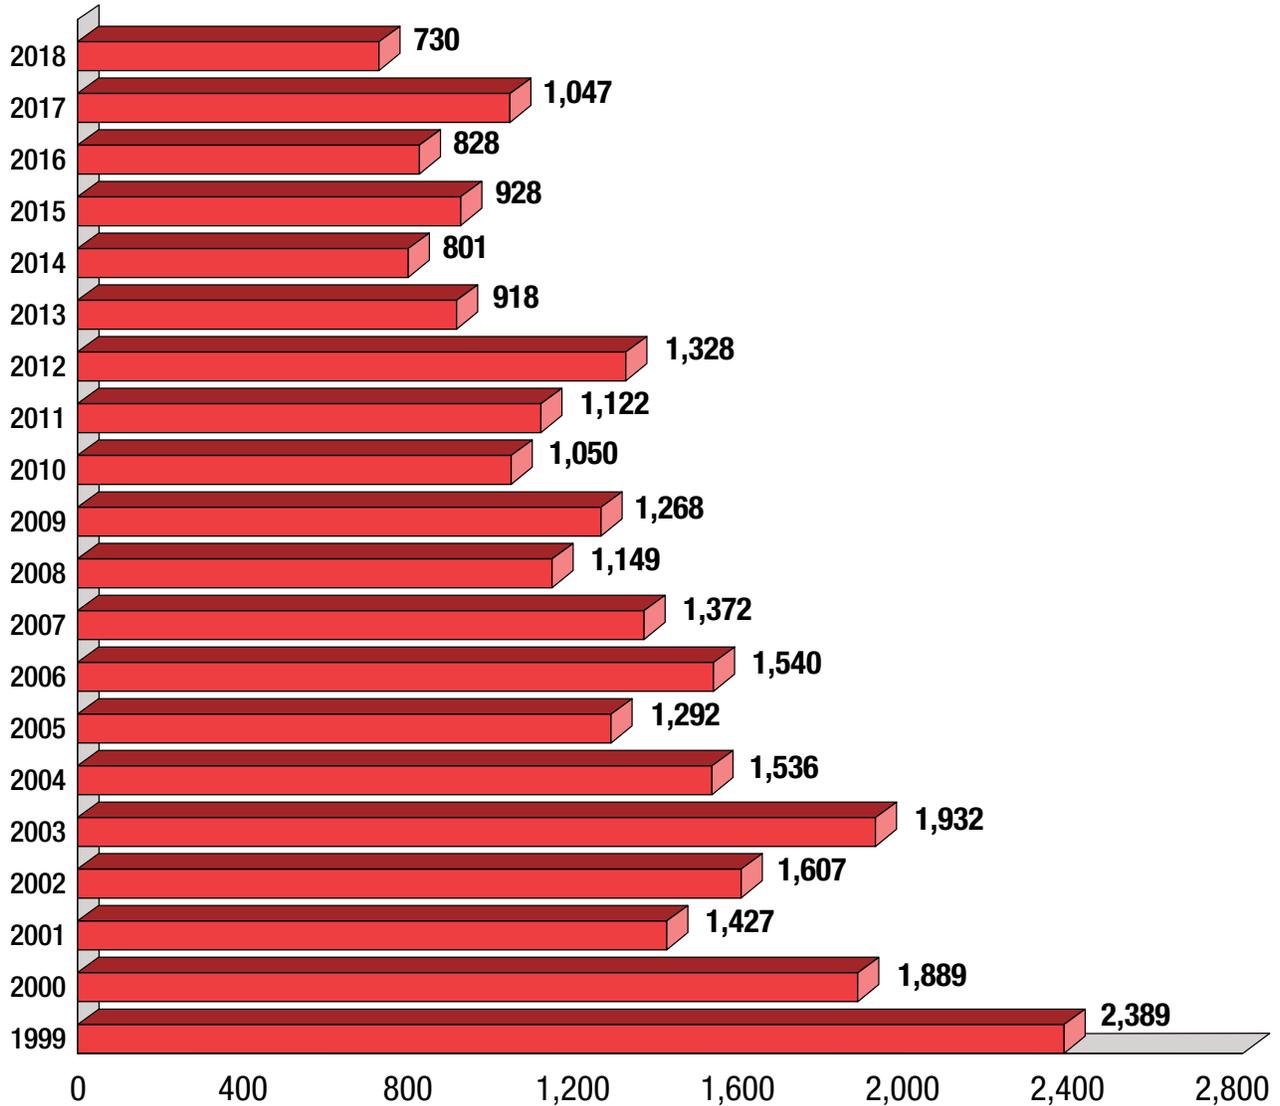

INCENDIARY FIRES

There were 730 identified incendiary fires in 2018, a 30 percent decrease from 2017.

Incendiary refers to any intentionally set fire. An arson fire is an example of an incendiary fire, but not all incendiary fires are arson. Incendiary fires may also include recreational fires intentionally set that get out of control. The value of property destroyed by incendiary fires in 2018 was over \$7 million, a 28 percent decrease from 2017. Both numbers are considerably lower than those in the 1990s.

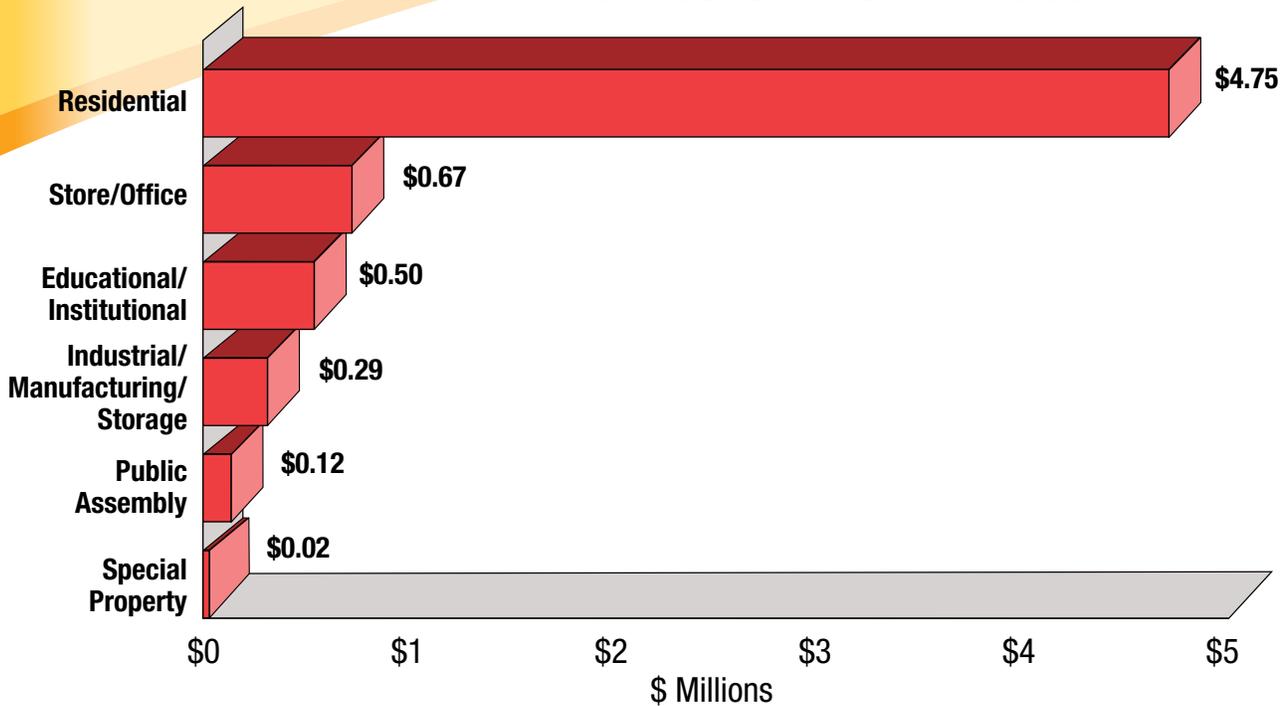

INCENDIARY FIRES IN MINNESOTA

Most Common Buildings for Incendiary Fires

- Residential structures: 67 percent
- Public assembly: 8 percent
- Special property: 8 percent
- Educational/institutional: 7 percent
- Industrial/manufacturing/storage: 7 percent
- Store/office: 3 percent

INCENDIARY STRUCTURE DOLLAR LOSS

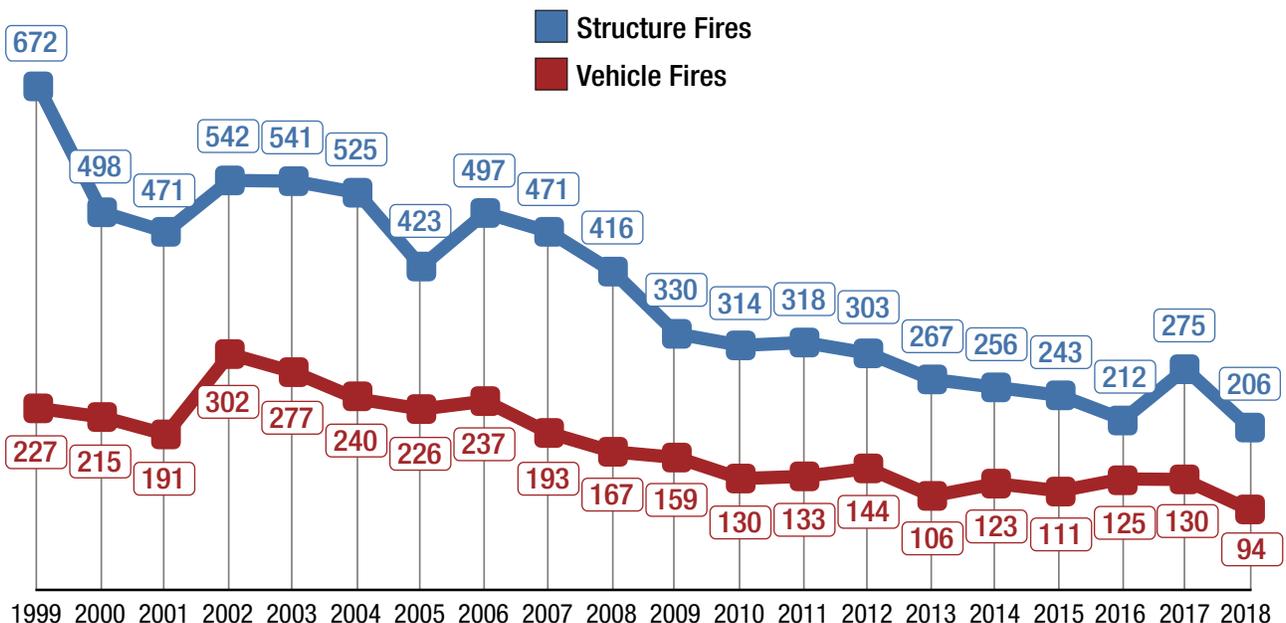

In 2018, “Incendiary” was listed as the cause of 4 percent of all reported structure fires with known causes and 4 percent of all reported vehicle fires in Minnesota.

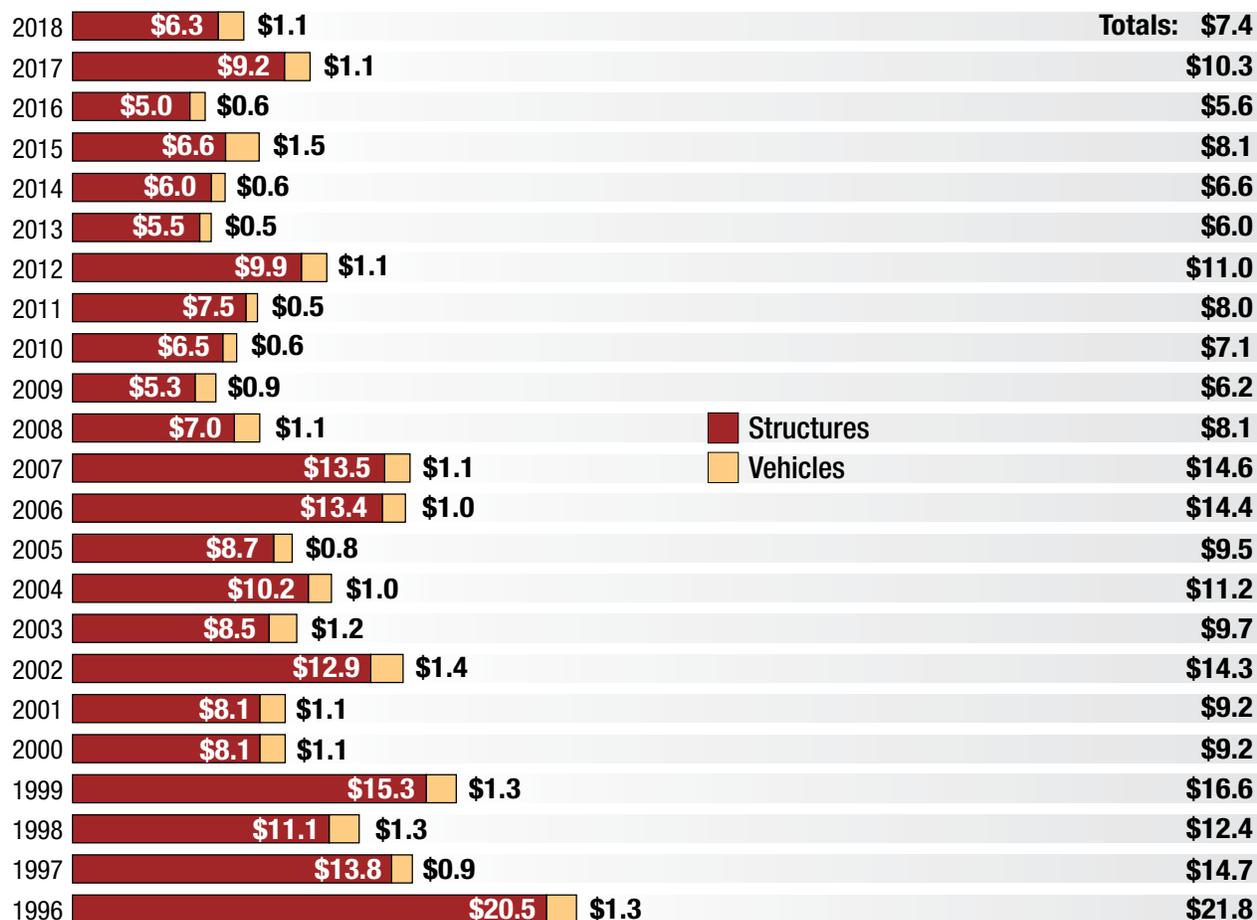

Vehicle incendiary dollar loss represented 4 percent of total vehicle fire dollar loss with an average dollar loss per incendiary vehicle fire of \$11,550.

Fire investigators agree that incendiary vehicle fires are under-reported and may not receive as much attention as structure fires receive.

INCENDIARY STRUCTURE AND VEHICLE FIRES

INCENDIARY FIRE DAMAGE IN MINNESOTA (in millions)

SUMMARY

Incendiary fires decreased in 2018 and dollar loss also decreased. Incendiary fires were the cause of 4 percent of structure fires with known causes.

In 2018, 67 percent of all incendiary structure fires were in residential property as well as 75 percent of all incendiary dollar loss.

In the past 30 years, incendiary fires caused 78 deaths and more than \$390.7 million in property loss.

Incendiary fires must continue to be addressed through such efforts as the Arson Reward Program and the Youth Firesetter Intervention and Prevention Program.

Arson Tip Line

Do you have a tip or information about a possible arson fire? Call the Arson Hotline at 1-800-723-2020.

Rewards are possible for information leading to the identification of persons responsible.

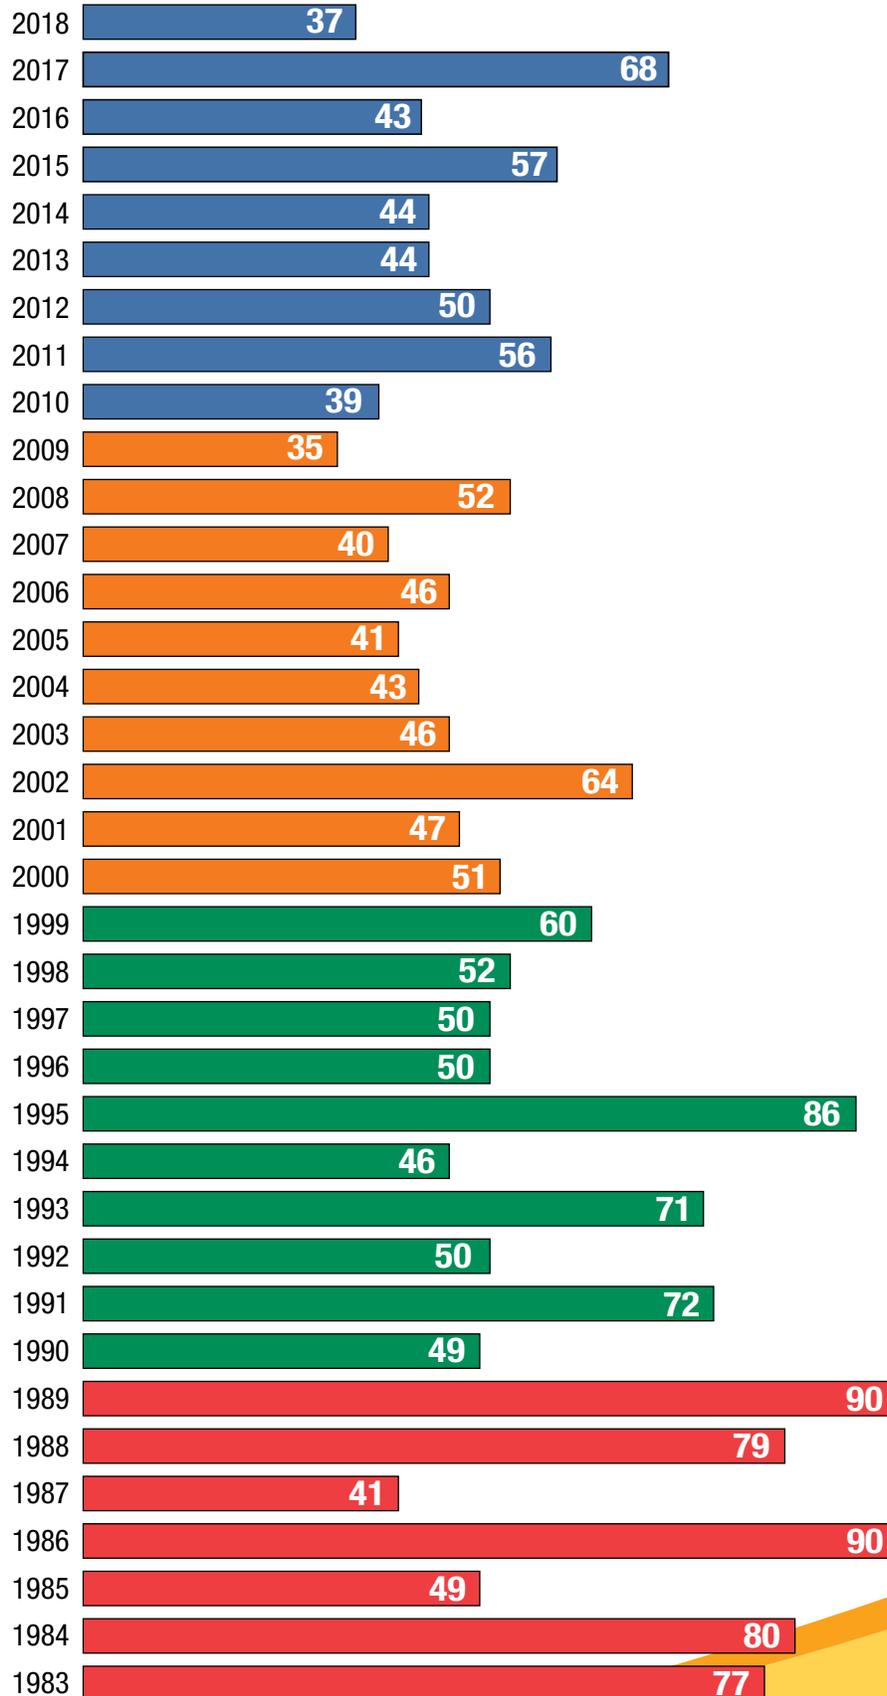

Rewards are as follows:

- An extraordinary reward of \$2,000 to \$5,000 for information or assistance that leads to the arrest of person(s) on a charge of arson.
- An information reward of up to \$2,000 for information in a meritorious situation with no requirement that the information lead to an arrest.
- A lesser reward for useful information which could prevent an incendiary fire or aid in catching a person who set one. There is no requirement that the information lead to an arrest.

A photograph of several firefighters in full protective gear, including helmets and respirators, standing at a scene. In the foreground, a stretcher is visible with a blue and yellow bag on it. The background shows a building with a red door. A red semi-transparent banner is at the top, and a yellow diagonal line separates it from the rest of the image.

CASUALTIES

FIRE DEATHS THE PAST 30+ YEARS

Fire deaths: People, not numbers

In 2018, 37 Minnesotans died in fires across the state, which is down from 68 in 2017. The average number of fire fatalities for the past 10 years is 47. Fire reports and medical examiners tell us where and how they died. We know the leading causes of fire deaths in Minnesota, and that alcohol and drugs can be a factor. The 2018 total will be added to our Minnesota database and to the national total. The numbers will appear in state and national databases for type of occupancy or location, cause of fire, smoke alarm performance, accidental or intentional, and other data. We know the numbers. But do we know the people?

Every year we talk about the number of fire fatalities, but these people weren't numbers or a piece of data in a report. Maybe we need to ask questions about who these citizens of Minnesota were, who they left behind, their future plans, their career path. Looking through media reports and obituaries written by their loved ones, we learn the stories of lives ended too soon. Through these stories, we truly see some of the impact of fire in Minnesota.

Our Minnesota victims were husbands and wives, sons and daughters, mothers and fathers, sisters and brothers, grandparents, great-grandparents,

nephews and nieces, aunts and uncles, cousins, fiancées, and longtime companions. They left behind over 250 family members and countless friends and other relatives. Ages ranged from 18 to 86. Six cities had two or three deaths, including Alexandria, with three in January of 2018. Two fires had two victims. The 31st death occurred in early July, and as the weeks went by, one wondered how long the state could go without a fire death. July 10 to Oct. 6 without a death was notable: almost three months.

The year did not begin well. There were eight deaths in January, starting with the death of a couple who had met two years earlier. Then a public works director after a 34-year career with the Minnesota National Guard, part of the Red Bulls in Operation Iraqi Freedom, who earned numerous awards including a Bronze Star. Then there was a 19-year-old attending a tech college for fashion design, who was so looking forward to being an aunt. Her nephew was born two days after her death. She was a twin and older by five minutes. Her twin misses their daily video chats.

January would come to an end with the death of a young mom, Jenna, in a vehicle crash that ended

in a fire. She leaves behind her two young sons who lost their father (her fiancée) in 2015 in a vehicle crash, five days after the birth of their second child. He was leaving the NICU after spending the night and may have fallen asleep driving to work. She was remembered for the strength of her spirit, commitment to others, and a smile that could light up a room.

There was a young man, David, who at one time had worked the North Dakota oil fields with his brother. Teresa, a prolific artist and mom known for her custom cards and Christmas décor in her art studio, who loved working in group home for the disabled. Todd, using his computer science degree from Mankato State to work for the U.S. Postal Service as a computer analyst – and 35-year retired USPS worker Tom, who also played guitar in a local rock band. Carter, the high school student who loved his brothers with his big heart and was looking forward to graduating from high school, having just passed his commercial driver's license test. Maybe he had plans to drive a big rig. There was a mom and dad burying their second child. Louise, with 40 years as an elementary school teacher in St. Paul schools. Thomas the iron worker. And Rebecca, a young mom and a liquor store manager who didn't like horseradish, but loved softball and her daughter.

Then there was Harold who met his future wife at a roller rink, but was drafted into the Army to serve in Korea for three years and came home to marry Carolyn and become a dairy and crop farmer. And Joseph who was born, lived, farmed and died on his family farm, always concerned about his farming neighbors.

Frequent themes in their obituaries were faith and a love of the outdoors, fishing, and hunting; Minnesota sports teams; and family. What is not told is the lasting impact on the families and first responders, EMS, medical personnel and others. Reading through the fire investigation reports, you discover that many, if not all, of these deaths were preventable.

Fire prevention must be a priority for everyone, every day, if as a state we want to achieve zero fire deaths and injuries. Smoke alarms, escape windows, fire extinguishers and fire sprinklers do save lives, but only after the fire has started. Each of us needs to be willing to change our own behavior when it comes to fire. We become complacent and think it won't happen to us, but not a single obituary said that the victim anticipated dying in a fire.

The top three causes of fire are men, women and children. The behavior is unattended cooking, combustibles too close to a heat source, misuse of appliances, not following manufacturer's operating instructions, misuse of flammable liquids, and playing with fire. Fire is a tool for cooking and heating, not a toy.

While we still hope to arrive at zero fire deaths someday, there are some things out of our control, such as Mother Nature and lightning strikes. There are products manufactured with flaws or defects that may lead to a fire. The Consumer Product Safety Commission is a great resource for product recalls. Online shopping has made counterfeit and unsafe products more and more prevalent, so encourage your community to purchase products that are listed and tested by a testing laboratory.

As prevention professionals, we have a lot to overcome. The movie and commercial industries misrepresent fire and all too often show people using it in inappropriate ways. Social media spreads viral challenges with posts, photos and videos of people playing with fire. Our daily interaction with fire is controlled and most often out of sight, making it more important than ever that people know the risks, speed and dangers of fire. May the memories of the real, living people who died in fires spur us on in our work.

Fire Deaths and Smoke Alarm Performance

In 2018, 37 civilians lost their lives in Minnesota fires, which is a decrease of 46 percent. In 36 percent of the residential casualties, smoke alarms were absent or non-operating. In 14 percent of residential fires, it was not possible to determine whether a smoke alarm was present or operating.

FIRE DEATHS AND SMOKE ALARM PERFORMANCE			
Circumstance	Fatalities	% of Dwelling Fires	% of Total Deaths
No Smoke Alarms Present	8	29%	22%
Inoperable Smoke Alarms Present	2	7%	5%
Working Smoke Alarms Present	9	32%	24%
Unknown If Alarms Present/Working	4	14%	11%
Not a Factor/Suicides, Explosions, etc.	5	18%	14%
TOTAL DEATHS IN DWELLINGS	28	100%	76%
Other Fire Deaths (Including vehicles, outdoors, other structures, etc.)	9		24%
TOTAL FIRE DEATHS	37		100%

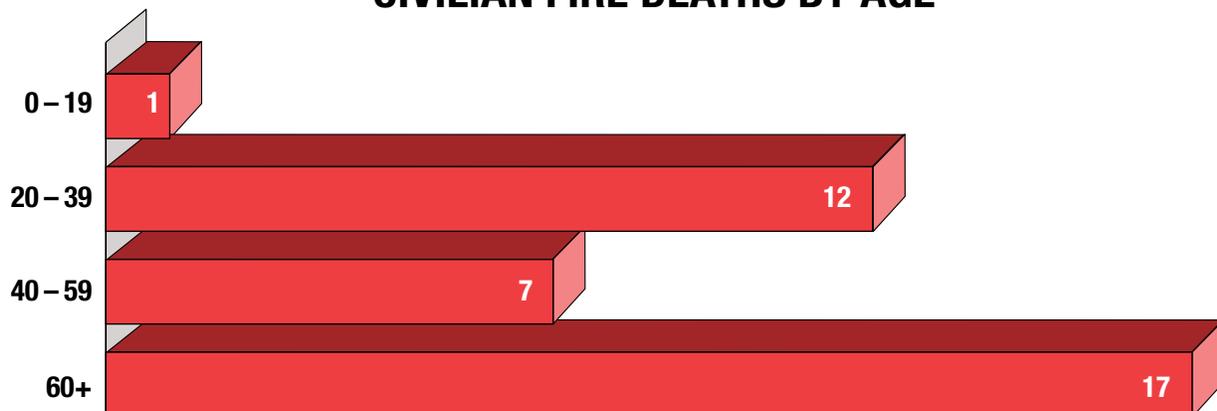

Nine Deaths in Homes with Working Smoke Alarms: Why Didn't They Get Out?

- Alcohol and Drug Use: 6
- Medical/Mobility Issues: 1
- Unknown: 1
- Irrational Action: 1

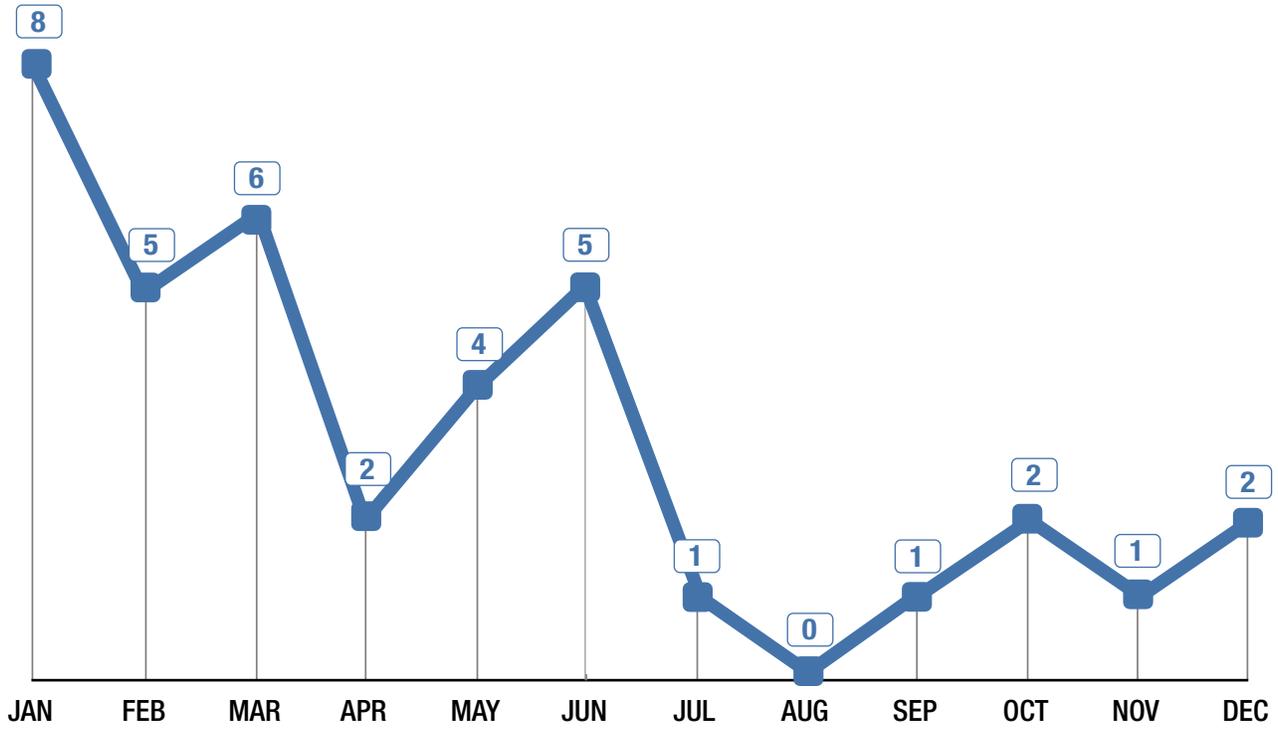

Civilian Fire Deaths

The number of people killed in fires in 2018 who were ages 20 – 39 increased by 71 percent. Sixty-eight percent of fire deaths in 2018 occurred between the hours of midnight and 6 a.m. Fifty-one percent of the fire deaths occurred in January through March.

CIVILIAN FIRE DEATHS BY AGE

CIVILIAN FIRE DEATHS BY MONTH

FIRE DEATHS BY TIME OF DAY

Cause	0000-0600	0600-1200	1200-1800	1800-2400	Total
Careless Smoking	4	2	1	3	10
Arson/Suicide	0	1	1	3	5
Combustible too Close	2	1	2	0	5
Cooking	0	0	0	3	3
Other	4	2	1	0	7
Undetermined	4	0	1	2	7
TOTAL	14	6	6	11	37

Civilian Fire Deaths: Where and Why?

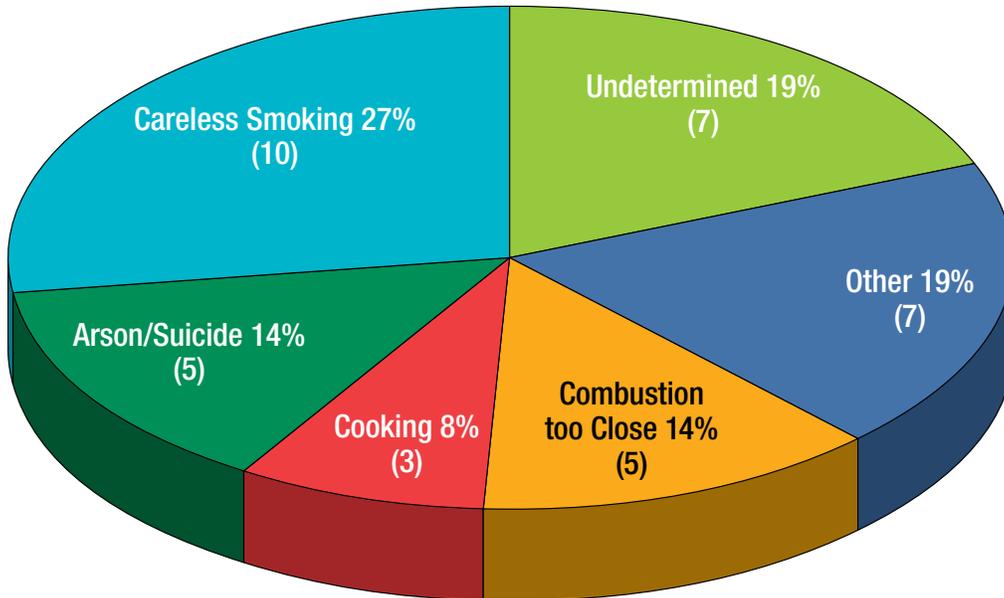

Seventy-four percent of all 2018 fire deaths occurred where people generally feel safest – in their homes.

2018 civilian fire deaths by location:

- Single family homes: 23
- Multi-family homes..... 5
- Outside..... 2
- Vehicle 5
- Other 2

In 2018, careless smoking was the leading cause of known fatal fires. Alcohol or drug use was a factor in 60 percent of the careless smoking deaths and in 49 percent of all fire deaths.

CIVILIAN FIRE DEATHS BY CAUSE

2018 FIRE DEATHS

In the past 29 years, 1,471 Minnesota civilians have died in fires (see distribution by county on the next page). In 2018, 45 percent of our state population lived in greater Minnesota, where the per capita fire death rate was 0.80 deaths for every 100,000 people. The per capita fire death rate for the metro area in 2018 was 0.55 per 100,000, while the rate for the state as a whole was 0.66 per 100,000. That is below the national per capita fire death rate, which was 1.04 per 100,000. There are three Minnesota counties that have remained fatality free for the past 29 years: Traverse, Stevens and Murray.

CIVILIAN FIRE DEATHS SINCE 1990 (1,471 TOTAL)

CIVILIAN FIRE DEATHS BY COUNTY SINCE 1990 (1,471 TOTAL)

30-Plus Years of Fire Death History

As Minnesota’s population has grown from 3.8 million in 1970 to 5.61 million in 2018, fire deaths have decreased. During the 1980s, fire deaths in Minnesota dropped 19 percent from the levels of the 1970s. The 1990s showed a further decrease of 25 percent from the levels of the 1980s. The 2000s had a decrease of 21 percent from the 1990s.

Much of this decline in the fire death trend can be attributed to fire service advancements. Since the mid-seventies, the promotion of fire protection technology (smoke alarms, sprinkler systems, etc.) has become widespread in Minnesota.

Also during this time, the state has mandated new inspection and code enforcement programs targeting hotels, motels, schools, and health and day-care facilities.

Firefighter Deaths

The Minnesota Fire Service mourns the loss of one of its members in 2018. Firefighter Timothy Royce died from a heart attack following two responses.

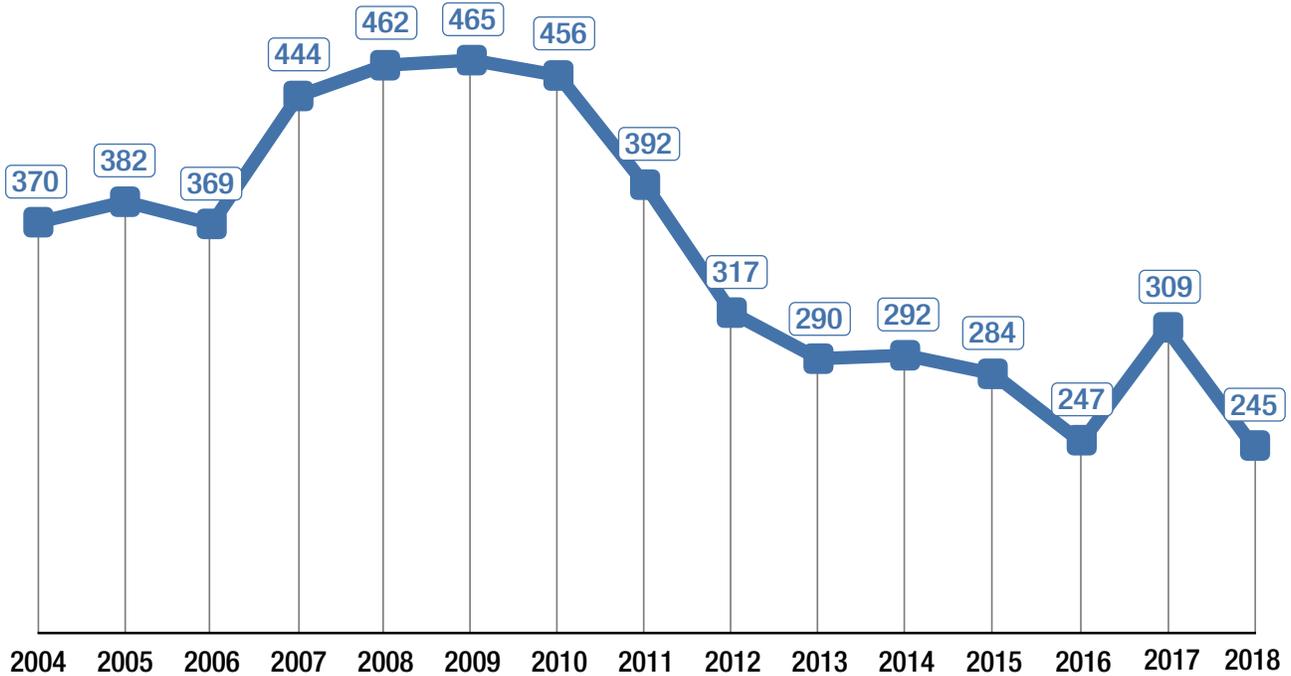

In 2018, 64 on-duty firefighter deaths occurred in the United States. That number represents the eighth time in the last 10 years the total has been below 70. We honor those who have fallen and remember them with pride and gratitude for their dedicated service in protecting their fellow citizens.

MINNESOTA FIREFIGHTER LINE OF DUTY DEATHS 1996 – 2018		
Year	Name Of Firefighter	City
1996	Melvin Windschitl	Chanhassen
1997	Harvey Chlian	Starbuck
1997	Leroy Swanson	Minneapolis
1998	Michael Wiborg	Chanhassen
1999	Marvin Huisman	Wilmont
1999	William Myers	St. Anthony

2017	Jeff Vollmer	Mayer
2018	Timothy Royce	Mapleton

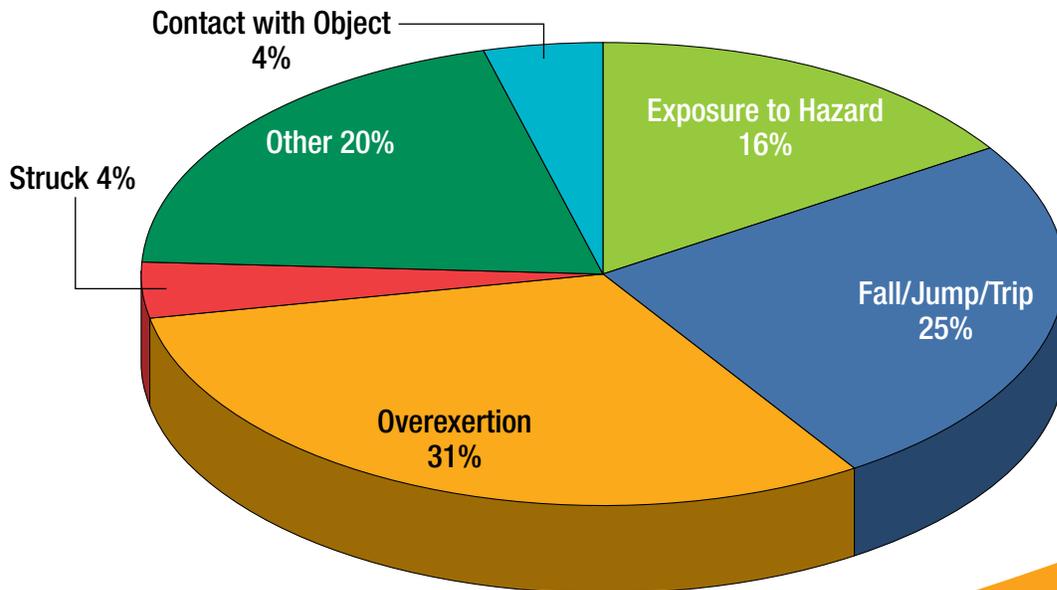

Firefighter Injuries

In 2018, 245 Minnesota firefighters were injured on the job — a decrease of 21 percent from 2017. Of these injuries, 138 (56 percent) were fire-related. Seventy percent of these fire-related injuries occurred while firefighters were fighting residential structure fires (97). Of known causes, “overexertion” was the most common (31 percent) with fall/jump/trip as the next highest at 25 percent.

FIREFIGHTER INJURIES

CAUSES OF FIREFIGHTER INJURIES

Fireworks Property Loss

The State Fire Marshal Division has gathered information about fireworks injuries and property damage since 1989. Minnesota hospitals voluntarily report injuries treated in their emergency departments during the period of June 25 through July 15 each year.

Property damage information is taken from the Minnesota Fire Incident Reporting System. From 1989 through 2001, a total of \$1.6 million in property damage resulting from fireworks use was reported, averaging more than \$123,000 per year. The total property damage due to fireworks use from 2002 through 2004 was over \$3 million. Property damage reported from 2009 through 2018 totaled almost \$4 million, averaging over almost \$400,000 per year.

Fireworks Injuries

Fireworks injuries most commonly occur to males between 10 and 29 years of age, with burns being the most common type of injury reported. Burn injuries include those to the extremities, eyes and face. It is impossible to know how many injuries occurred for which medical attention was not sought. Approximately 85 percent of Minnesota hospitals participate in the survey of fireworks injuries.

* Information collected from survey conducted at Minnesota hospitals from June 22 through July 15 each year.

** There was one injury in 2011, one injury in 2015, one injury in 2016, one injury in 2017 and two injuries in 2018 that listed age as “unknown” or “0.”

† There was one fire death from fireworks in 2015.

SUMMARY

Historically, Minnesotans have been at greatest risk of fire death and injury in their own homes. In 2018, 74 percent of fire deaths and 78 percent of civilian injuries occurred in residential settings. Ninety-three percent of fire deaths in structures were in residential property. The presence or absence of working smoke alarms is often a factor in fire fatalities. In 36 percent of fire deaths occurring in dwellings, smoke alarms were not present or not working. In 14 percent of residential deaths, it was not known whether alarms were present or functioning.

Careless smoking was the leading cause of fire deaths in 2018 with 10 fire deaths. Alcohol or drug use was an impairing factor in 49 percent of all fire deaths.

Overall, fire deaths have decreased over the past 30 years in Minnesota, even as the population has grown. However, many preventable tragedies continue to occur. Prevention and education efforts, particularly those targeting vulnerable populations, are essential to reduce losses from fire.

A group of firefighters in full gear, including helmets and air tanks, are positioned at a night fire scene. The scene is illuminated by the bright orange and yellow flames of a fire in the background. The firefighters are wearing brown turnout gear with reflective yellow stripes. One firefighter's air tank is labeled "MSA". Another firefighter's name tag reads "CRAWFORD". The word "PARTICIPATION" is overlaid in large, bold, red letters with a yellow outline across the center of the image. The background is a dark night sky with a large plume of fire rising from the ground.

PARTICIPATION

Minnesota Fire Incident Reporting System

The Minnesota State Fire Marshal Division appreciates the efforts of the fire departments that submitted data via the Minnesota Fire Incident Reporting System (MFIRS) in 2018.

This information is essential if we are to understand and effectively combat the fire problem in Minnesota. It allows the division to focus on real fire problems, rather than popular perceptions. On the local level, this data provides information to help focus on prevention efforts; it also assists with budget planning for staffing and equipment.

Fire data is requested on a weekly basis by the media, the public, the fire service, and the fire protection community. It is used to support

legislative initiatives and to guide public fire/safety campaigns.

Information about reporting departments is listed on the following pages. In 83 of Minnesota's 87 counties last year, 100 percent of the fire departments reported via the MFIRS system.

In some instances, the protection district of the reporting fire department goes beyond its county boundary, but the incident is recorded within the department's home county. The fire rate equals one fire per number of persons indicated. For example, in Aitkin County in 2018, there was one fire for every 330 people.

RUNS, DOLLAR LOSSES AND DEATHS BY COUNTY

County	Population	Fire Runs	Other Runs	Total County Dollar Loss	Fire Rate	Avg. Dollar Loss/Fire	Fire Deaths
