Evaluating Affordable Housing Efforts

Disparities Report 2021

2021 Disparities Report

In 2014 Minnesota Laws, Chapter 312, Article 2, Section 16, the Legislature requires the Minnesota Housing Finance Agency to annually report on housing disparities.

(b) The Housing Finance Agency shall annually report to the chairs and ranking minority members of the house of representatives and senate committees with jurisdiction over the agency on progress, if any, the agency has made in closing the racial disparity gap and low-income concentrated housing disparities.

This report covers activities carried out in 2021 and has two sections:

- 1. Homeownership: Reducing Disparities
- 2. Rental Housing: Providing Low-Income Renters with Greater Choice

Homeownership: Reducing Disparities

While Minnesota has the third highest homeownership rate in the country, it also has the fourth largest disparity between: (1) White/non-Latinx households and (2) Black, Indigenous and households of color.

Table 1: 2019 Homeownership Rates¹

Category	Rate	National Rank
Overall Homeownership Rate	71.9%	3 rd Highest
Homeownership Rate for White/Non-Latinx Households	76.9%	6 th Highest
Homeownership Rate for Black, Indigenous and Households of Color	43.6%	37 th Highest
Percentage Point Gap in Homeownership Rates	33.4	4 th Largest

As shown in Figures 1 and 2 below, the disparity has been large and persistent, and it is especially egregious for African-American/Black households.

¹ U.S Census Bureau, *2019 American Community Survey*. Due to sampling issues during the pandemic, the Census Bureau has issued limited data on an experimental basis from the 2020 American Community Survey.

Figure 1: Historical Homeownership Rates in Minnesota, by Race and Ethnicity²

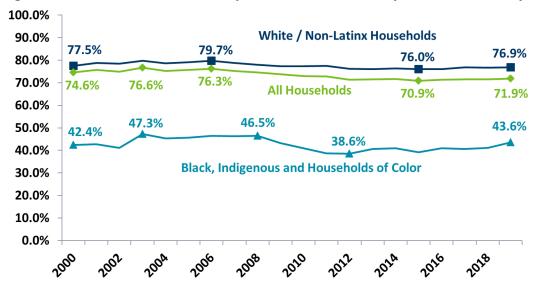

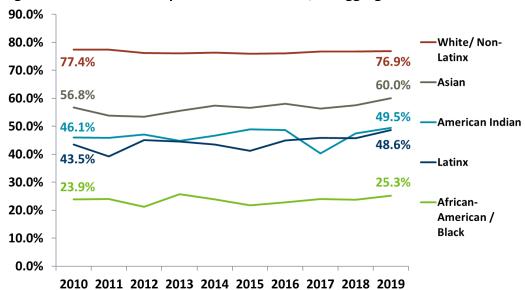

Figure 2: Homeownership Rates in Minnesota, Disaggregated³

Reducing the disparities is critical because successful homeownership is a powerful tool for families. For example, a study from the Joint Center for Housing Studies at Harvard University found that:

Each year of successful homeownership between 1999 and 2009 increased the wealth of African American households by \$8,474 on average.⁴

² U.S. Census Bureau, *Decennial Census* and *American Community Surveys*.

³ U.S. Census Bureau, *American Community Surveys*.

⁴ Joint Center for Housing Studies at Harvard University, *Is Homeownership Still an Effective Means of Building Wealth for Low-Income and Minority Households? (Was it Ever?)*, September 2006, pp 46-47. The results occurred during a less-than-ideal and tumultuous period involving a housing boom and bust.

Reducing the homeownership disparity is one of our strategic priorities, and we have made significant progress in our lending, as shown in Table 2. Highlights include:

- Since 2011, we have more than tripled our annual lending to Black, Indigenous and households of color who are first-time homebuyers, increasing the number of loans from 515 to 1,663.
- We are serving Black, Indigenous and households of color at a rate that is two times greater than
 the overall mortgage industry. Based on the most recent data, 38 percent of our first-time
 homebuyers are Black, Indigenous and households of color, while 18 percent of all homepurchase borrowers in Minnesota are from these underserved communities.

However, Minnesota Housing accounts for only 6 percent of the overall home-purchase mortgage market, and to make significant progress in closing the homeownership gap, the entire homebuying and mortgage industry needs to work together and accelerate its efforts.

Table 2: Home Mortgages for Black, Indigenous and Households of Color in Minnesota

Year	Number of First-Time Homebuyer Mortgages Supported by Minnesota Housing ^a	Number of Minnesota Housing's First-Time Homebuyer Mortgages Going to Black, Indigenous and Households of Color ^a	Share of Minnesota Housing's Mortgages to Black, Indigenous and Households of Color	Share of Overall Market's Mortgages to Black, Indigenous and Households of Color ^b
2007	3,422	508	15%	11%
2008	2,764	451	16%	9%
2009	1,222	383	31%	10%
2010	1,920	595	31%	10%
2011	2,245	515	23%	10%
2012	2,328	530	23%	9%
2013	2,746	634	23%	11%
2014	2,430	602	25%	11%
2015	3,769	1,054	28%	12%
2016	3,418	1,076	31%	14%
2017	3,541	1,175	33%	15%
2018	4,002	1,377	34%	16%
2019	4,082	1,402	34%	17%
2020	4,328	1,473	34%	18%
2021	4,390	1,663	38%	Not yet available

a. Minnesota Housing's mortgage program for first-time homebuyers (Start Up). The counts are based on purchased loans.

Until the last five years, the agency's highest lending rates to Black, Indigenous and households of color occurred during the housing crisis of 2009 and 2010, when overall mortgage lending was very low. Even though our lending was significantly down during this period, our outreach efforts to Black, Indigenous and households of color maintained the number of loans going to these underserved households (roughly 400 to 600 loans annually), which resulted in higher lending rates (31 percent).

b. Federal Financial Institutions Examination Council, Home Mortgage Disclosure Act (HMDA) data. Data applies to home purchase mortgages and excludes refinancing.

Over the last decade, we have carried several initiatives to reach and better serve Black, Indigenous and households of color. For example:

- At the end of 2014, we created the Homeownership Capacity program through which, we provide grant funding to organizations that work with households facing barriers to homeownership. The grantees provide intensive homebuyer and financial training that prepares the households for homeownership. In 2021, 86 percent of the 839 program participants were Black, Indigenous and people of color.
- In 2015, we introduced a redesigned down-payment assistance program (Deferred Payment Loan Plus) that provides larger deferred loans (which is currently \$15,000 rather than the standard \$12,500) to households that have at least two of the following four characteristics:
 - 1. A sole head of household with at least one eligible dependent,
 - 2. A household of four or more people,
 - 3. A household member with a disability, or
 - 4. Mortgage costs that will be more than 28 percent of the household's income.

The program has effectively reached Black, Indigenous and households of color, accounting for 69 percent of the borrowers receiving this assistance.⁵ In contrast, Black, Indigenous and households of color account for 33 percent of borrowers receiving the standard deferred loan.

As shown in Table 2, our lending to Black, Indigenous and homebuyers of color increased substantially for a few years starting in 2015, after these two programs were launched.

To increase awareness about our home mortgages and down-payment and closing-cost resources and promote homebuyer education, we actively reach out to consumers and the business community.

Potential homebuyer outreach

- Host booths at community events that are well-attended by Black, Indigenous and households of color
- Create videos, posts, and ads for Social Media
- Develop targeted-market and public-relations efforts, including interviews on community publication and radio shows
- Launch an outreach campaign in the African-American/Black community in the metro area to address the very large homeownership disparity

Business-to-business outreach

- Cultivate relationships with lenders and real estate agents who work in diverse communities
- Create strategic partnerships with:
 - Real Estate Associations e.g. National Association of Hispanic Real Estate Professional (NAHREP), National Association of Real Estate Brokers (NAREB), Asian Real Estate Association of America (AREAA)
 - Non-profit homeownership advisors who work in diverse communities

⁵ Based on purchased loans from October 1, 2020 through September 30, 2021.

Offer educational opportunities for Realtors, including continuing education credits

Industrywide Outreach

 Lead an industry-wide coalition to expand homeownership for Black, Indigenous and households of color. <u>The Homeownership Opportunity Alliance</u> works to address barriers to homeownership, educates the industry on market opportunities to serve households of color, and has implemented a campaign called "Get Ready. Be Ready!" to connect households of color with <u>homeownership is possible.</u>

In addition to mortgage financing, we fund single-family development projects that have the goal of serving Black, Indigenous and households of color. Since 2016, the share of these properties serving Black, Indigenous and homebuyers/owners of color has increased from 45 to 65 percent in 2021.

Rental Housing: Providing Lower-Income Renters with Greater Choice

To give lower-income renter households more options to live in safe, decent housing that is affordable and in the community of their choice, we have identified two types of communities that need more affordable rental housing:

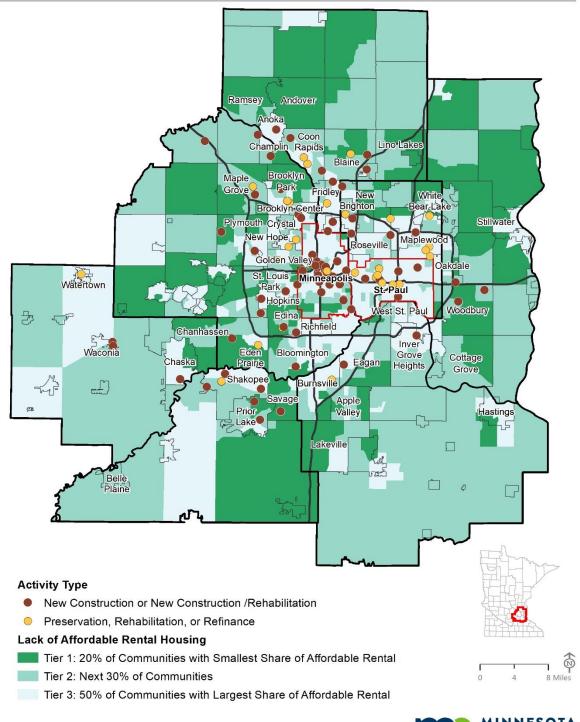

- Communities (typically higher income) that have limited choices because a small share of the
 overall housing stock is affordable rental housing. We have classified communities across the
 metro area into three tiers:
 - Tier 1 The 20% of communities with the smallest share of the housing stock that is affordable rental and the fewest choices for lower-income renters
 - o Tier 2 The next 30% of communities in terms of having the smallest share
 - o Tier 3 the 50% of communities with the largest share.

It's important to note that even those communities with the largest share of housing stock that is affordable still have an inadequate supply.

- Communities (typically lower income) where **current demand for affordable rental housing is greater than the supply**, as reflected by a large share of renter households spending more than 30% of their income on rent and utilities. Again, we have classified communities across the metro area into three tiers:
 - Tier 1 The 20% of communities with the largest share of cost-burdened renter households
 - o Tier 2 The next 30% of communities in terms of having the largest share
 - Tier 3 The 50% of communities with the smallest share

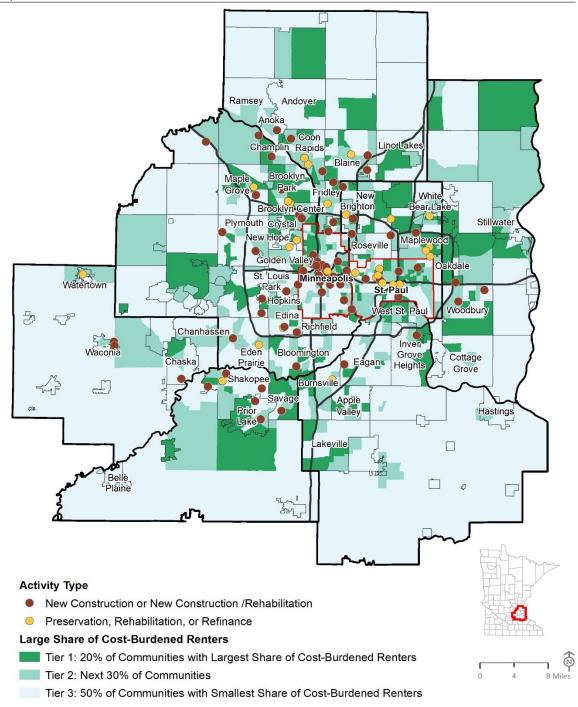

To increase choice, we encourage development in Tier 1 and 2 communities of both types by providing more points in our funding selection process to developments in these communities. To assess that, we have mapped the location of all the developments we have selected for funding through our Consolidated Request for Proposals (RFPs) over the last five years (2017 – 2021). The following two maps show the tiers and the locations of the developments selected for funding.

Map 1: Consolidated RFP Selections in Areas with Lack of Affordable Rental Housing

Map 2: Consolidated RFP Selections in Areas with Cost-Burdened Renter Households

In Map 1, the communities with the darkest shades of green have the most limited supply of rental housing that is affordable, providing lower-income renters the fewest choices. In Map 2, the communities with the darkest shades of green have the most renters who are cost burdened by their housing payments, indicating that the demand for affordable rental housing is greater than the supply. In both maps, the dots show the location of the developments we selected for funding.

Table 3 aggregates and summarizes the locations of the selected developments and compares it with where renters are currently living. For example, the first set of numbers in the top row show that 7 percent of the new construction units are in Tier 1 communities (the 20% of communities with the smallest share of affordable rental housing), 32 percent are in Tier 2 communities, and the final 61 percent are in Tier 3 communities.

Table 3: Share of Units in Developments Selected for Funding through the 2017-2021 Consolidated RFPs in Each Tier, Seven-County Metro Area

	Lack of Affordable Rental Housing			Large Share of Cost-Burdened Renters					
Activity Type	Tier 1: 20% of Communities with Smallest Share of Affordable Rental	Tier 2: Next 30% of Communities	Tier 3: 50% of Communities with Largest Share of Affordable Rental	Tier 1: 20% of Communities with Largest Share of Cost- Burdened	Tier 2: Next 30% of Communities	Tier 3: 50% of Communities with Smallest Share of Cost- Burdened	# of Units or Households		
Community Characteristics: Where Selected Developed Are Located									
Units in New Construction Projects OR New Construction Combined with Rehabilitation	7%	32%	61%	19%	43%	38%	5,402 units		
Units in Preservation / Rehabilitation / Refinance Projects	3%	14%	83%	20%	64%	16%	2,601units		
All Units (Two Categories Combined)	6%	26%	68%	19%	50%	31%	8,003 units		
		Community Cha	aracteristics: Whe	re Current Renter	s Live				
All Renter Households	8%	32%	60%	19%	37%	44%	374,867 households		
All Lower-Income Renter Households (<\$50,000 annual income)	6%	27%	67%	25%	41%	34%	188,328 households		

These data indicate that Minnesota Housing is taking a balanced approach to serving different types of communities and taking steps to increase renter choice and deconcentrating wealth. For example, the share of new construction units going into the communities with the most limited supply is slightly greater than share of lower-income renter households living there.

- While only 6% of all lower-income renter households live in the 20% of communities with the
 most limited supply of affordable rental housing (see green shading, Tier 1 and bottom row), 7%
 of the new construction units selected for funding are in these communities (see green shading,
 Tier 1 and top row).
- In addition, while only 27% of all lower-income renter households live in the next tier of communities (Tier 2), 32% of the new construction units selected for funding are there.

Higher-income communities generally have a smaller stock of affordable rental housing, and developing affordable rental housing in these higher-income communities deconcentrates wealth.⁶ It gives lower-income households the opportunity to live in higher income communities if that is their choice.

In our funding application process to develop rental housing, we formally adopted in the fall of 2020 the priority of selecting developments that are in either communities with a limited supply of affordable rental housing (Tier 1 or 2) or communities with a large share of cost-burdened renter households (Tier 1 or 2).

⁶ The correlation coefficient between share of the housing stock that is affordable rental and median household income is -0.77, which is a strong association. In other words, about 59% of the variation across communities in the share of the housing stock that is affordable rental is explained by median household income.
