TRANSPORTATION IMPROVEMENT PROGRAM
1997-2000
SUMMARY

The Twin Cities Metropolitan Planning Organization's Transportation Improvement Program (TIP) for 1997 through 2000 responds to new procedures required by the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA). The new legislation requires that all federally funded transportation projects within the entire seven county area be included in the regional TIP. The TIP must be consistent with the projections of federal funds and local matching funds. All major transportation projects in the federally defined carbon-monoxide nonattainment area must be evaluated for their conformity with the Clean Air Act Amendments (CAAA) of 1990. This analysis must also include regionally significant non-federally funded projects. The 1997-2000 TIP is fiscally constrained and is in conformity with the CAAA of 1990 and was prepared through a process that gave adequate opportunity for public involvement.

The Transportation Improvement Program (TIP) for 1997 through 2000 is a multi-modal program of highway, transit, bicycle, pedestrian and transportation enhancement projects proposed for federal funding for the Twin Cities Metropolitan Area. Federal regulations require that a TIP be developed at least every two years. The region has chosen to revise its TIP every year. This is the first year the region has developed a TIP that covers four years. All four years are fiscally constrained. Most of the federal funds have already been earmarked for the Twin Cities Area and the specific projects have appeared in the previous (1997-2000) TIP.

The region developed separate processes to solicit projects utilizing Surface Transportation Program (STP), Urban Guarantee funds, Congestion Mitigation Air Quality Funds (CMAQ), and Transportation Enhancement Funds. A cooperative process was followed to prioritize the remaining Title I, Title III, and to a limited degree, state highway funds.

The 1997-2000 TIP for the Twin Cities Metropolitan Area includes Title I type projects valued at over $740 million for highway, transit, enhancement, bike and walk projects, of which approximately $396 million is requested of the federal government in addition to Demonstration funds allocated to regional projects.

The region has assumed it will receive approximately $68 million Section 5307 Capital Funds over the 1997-2000 period. The region will receive $1,850,000 in Section 5307 operating assistance for 1997. No federal operating assistance is assumed beyond 1997. Title 1 funds approved exclusively for transit capital projects and new service operating costs over the three year period totals approximately $29 million.

All projects selected are consistent with the regional transportation plan. In many cases, the major projects are specifically identified in the regional plan. All other projects other than those that are small and can be grouped, are specifically identified in either Appendix O or P of the Transportation Policy Plan.

The TAB held two public information meetings and one public hearing on the TIP prior to adoption. Over 300 groups were mailed notices of these meetings, in addition to the various public notifications carried out in accordance with Council requirements. The TAB considered and responded to all comments received on the draft TIP.

The TIP adopted by the Transportation Advisory Board and approved by the Metropolitan Council, is based on, implements and is consistent with the regional Transportation Development Guide/Policy Plan (TPP).

Identified projects are subject to the approvals of various agencies. The inclusion of a specific project as part of the TIP does not imply an endorsement of the specific design alternative and engineering details. Inclusion in the TIP is a funding commitment assuming the specific project development process has addressed all requirements.

1. INTRODUCTION

The 1997-2000 Transportation Improvement Program (TIP) for the Twin Cities Metropolitan Area (shown in Figure 1) is a multi-modal program of highway, transit, bike, walk and transportation enhancement projects and programs proposed for federal funding throughout the seven-county metropolitan area in the next four years. The TIP is prepared by the Metropolitan Council in cooperation with the Minnesota Department of Transportation (MN/DOT). The projects contained in the TIP are consistent with and implement the region's transportation plan and priorities.

FEDERAL REQUIREMENTS

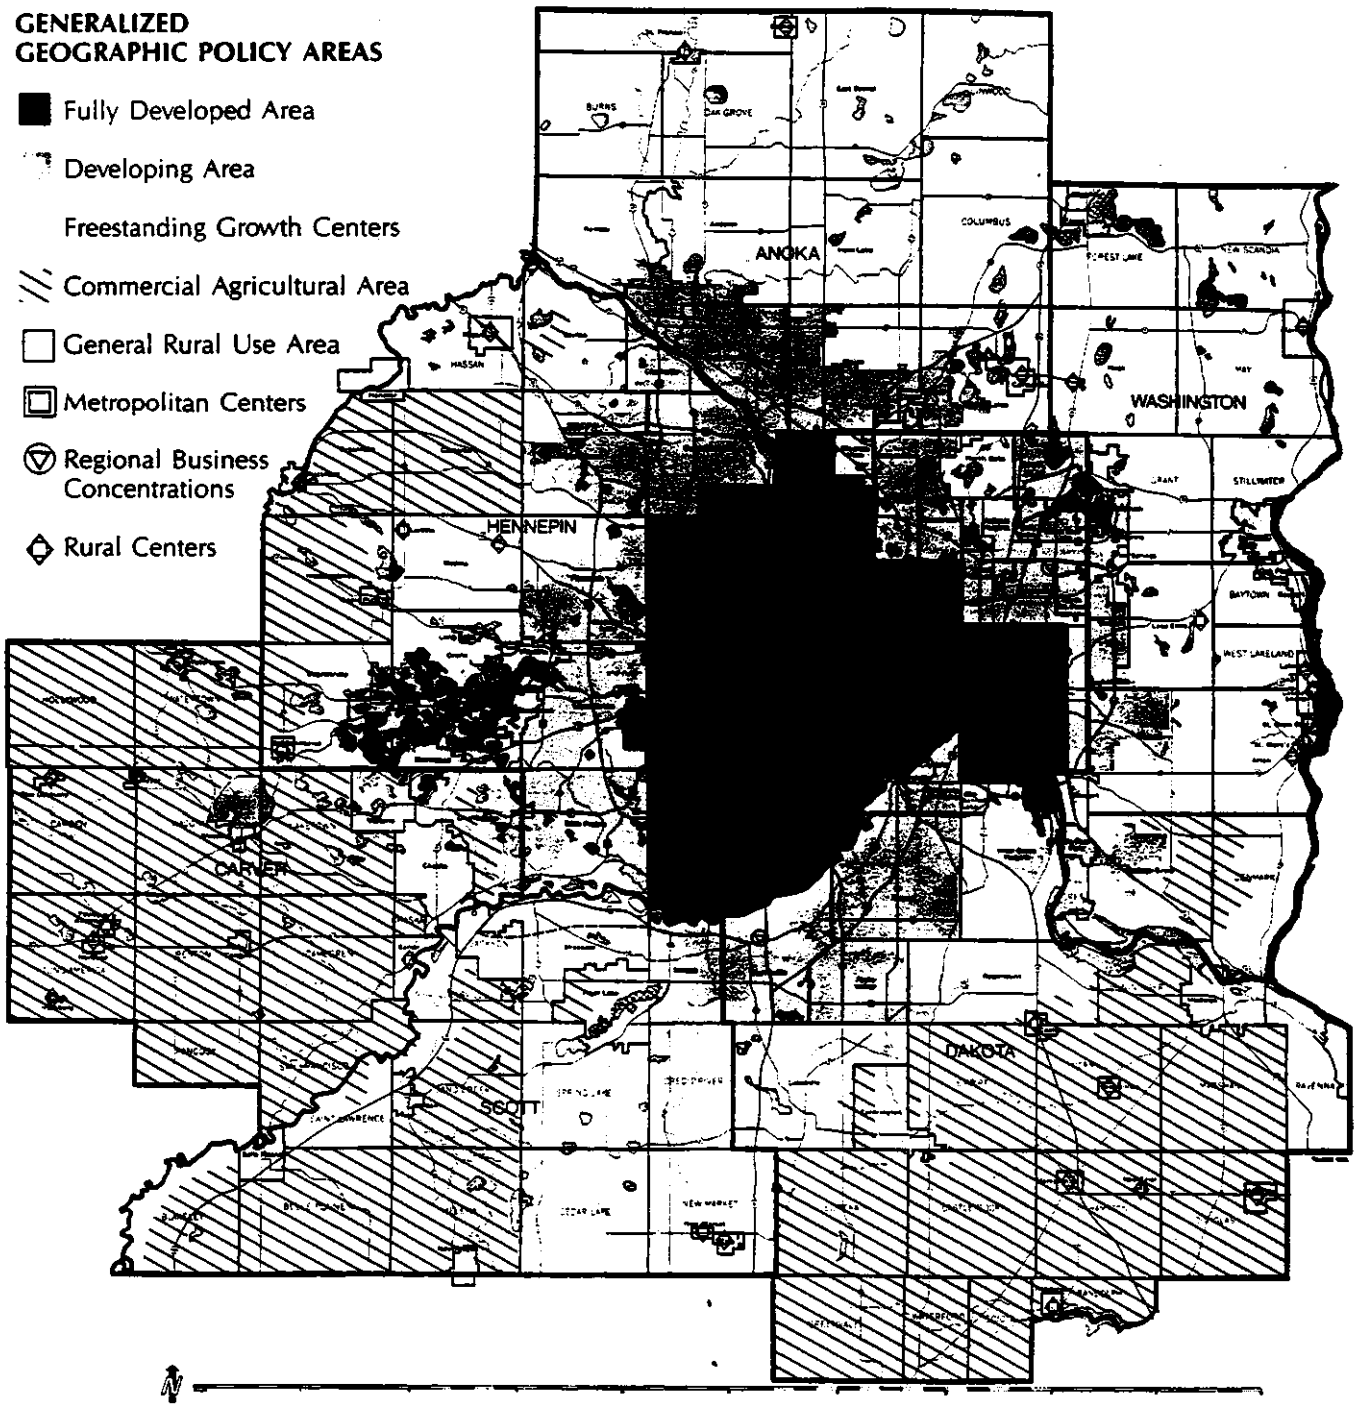
Federal regulations[1] require that a Transportation Improvement Program:

- Be developed and updated every two years.
- Must cover a period of at least three years.
- Be a product of a continuing, comprehensive and cooperative (3C) planning process.
- Be consistent with regional land use and transportation plans as well as the State Implementation Plan (SIP) for air quality.
- Identify transportation improvements proposed in the Transportation Development Guide/Policy Plan and recommended for federal funding during the program period.
- Be developed from a conforming regional metropolitan transportation plan that is fiscally constrained.
- Be initiated by locally elected officials of general purpose governments.
- Include both highway and transit projects.
- Allow opportunities for public participation in preparation of the TIP.
- Afford an opportunity for participation of private transit providers in preparation of the TIP.
- Be fiscally constrained.
- Indicate the priorities in the seven-county metropolitan area;
- Indicate year in which initial contracts will be let;
- Indicate appropriate source of federal funds;
- Include realistic estimates of total costs and revenues for the program period;
- Contain projects that are from a transportation plan approved by the Federal Highway Administration.

The 1997-2000 TIP for the Twin Cities Metropolitan Area meets all these requirements and will be submitted to Mn/DOT for inclusion in the STIP to be approved by the Governor's designee.

1. Federal regulations ISTEA, 23 USC 134.

FIGURE 1



Note: Areas are shown as of May, 1988. A precise location of the urban service area for any community is available from the Metropolitan Council Data Center, 612 291-8140. The line between the developing area and the rural area is referred to as the metropolitan urban service area boundary.

The following detailed information on each project that will use federal funds is provided in Appendix A:

- Identification of the project;
- Description of the scope of project;
- Estimated total cost and the amount of federal funds proposed to be obligated during each of the program years;
- Proposed source of federal and nonfederal funds; and
- Identification of the regional or state local agencies that are the recipients responsible for carrying out the project.
- Air Quality Analysis Category
- Identification of projects from ADA implementation plans

REGIONAL PLANNING PROCESS

The transportation planning process in the Twin Cities region is based on Minnesota Statutes and requirements of federal rules and regulations on urban transportation planning that first became effective June 30, 1983 when they were published in the Federal Register. The Metropolitan Council is the designated Metropolitan Planning Organization (MPO) and is responsible for continuing, comprehensive and cooperative transportation planning in the Metropolitan Area. Since transportation planning cannot be separated from land use and development planning, the transportation planning process is integrated with the total comprehensive planning program of the Metropolitan Council.

The Twin Cities' transportation planning process is defined in the Prospectus. Administered and coordinated by the Metropolitan Council, this process is a continuing, comprehensive and cooperative effort, involving municipal and county governments, the Metropolitan Airports Commission (MAC), the Minnesota Department of Transportation (Mn/DOT), the Minnesota Pollution Control Agency (MPCA), transit operations and FHWA and FTA. Elected local government officials are ensured participation in the process through the Metropolitan Council's Transportation Advisory Board (TAB). The TAB provides a forum for the cooperative deliberation of state, regional and local officials, intermodal interests and private citizens.

The Metropolitan Reorganization Act of 1994 merged the Metropolitan Transit Commission (MTC), the Metropolitan Waste Control Commission (MWCC) and the Regional Transit Board (RTB) into the Metropolitan Council, transferring the duties, functions, property and obligations of the abolished agencies to the Council. This restructuring changes the roles and responsibilities for transit planning and service provision significantly throughout the region.

Private transit operators are informed of transit projects and competitive bidding opportunities, and participate in the planning process through the Providers Advisory Committee and quarterly providers meetings. (See Twin Cities Area's private operator participation process, Appendix D.)

PUBLIC PARTICIPATION OPPORTUNITIES IN PREPARATION OF THE TRANSPORTATION IMPROVEMENT PROGRAM

A concerted effort has been made to insure all interested and concerned parties were offered opportunity to participate in the preparation of the TIP. Three meetings and an open house were held by the Transportation Advisory Board to provide information and to get public reaction to the TIP.

- A public meeting was held on April 17, 1996, to explain and answer questions about the TIP on schedule and approval process.
- A public meeting was held on May 29, 1996, to initiate public comment on the draft TIP.
- An open house was held in June, 1996 to provide opportunity for interested public to review TIP document.
- A public hearing was held on June 19, 1996 to hear comments on the draft TIP.

In preparation for these meetings, 300 mailings were sent, notification was made in the State Register, press announcements were sent to the media, and the schedule was published in the Metropolitan Digest which is mailed to 600 local elected officials and legislators.

A significant effort was also made to solicit projects for inclusion into the TIP. In October, 1995 solicitation for projects to be funded by Enhancement funds were mailed to 700 cities, counties, agencies and special interest groups. A forum was held to discuss the solicitation process and answer questions in Jan. 1995. By Jan. 8, 1996, 111 projects were submitted requesting over $207 million in federal funds.

In addition, the presentations identified the meetings of the Transportation Advisory Board's TAC, TAB, Metropolitan Council's Transportation Committee and Council meetings when actions were taken, were noticed and open to the public.

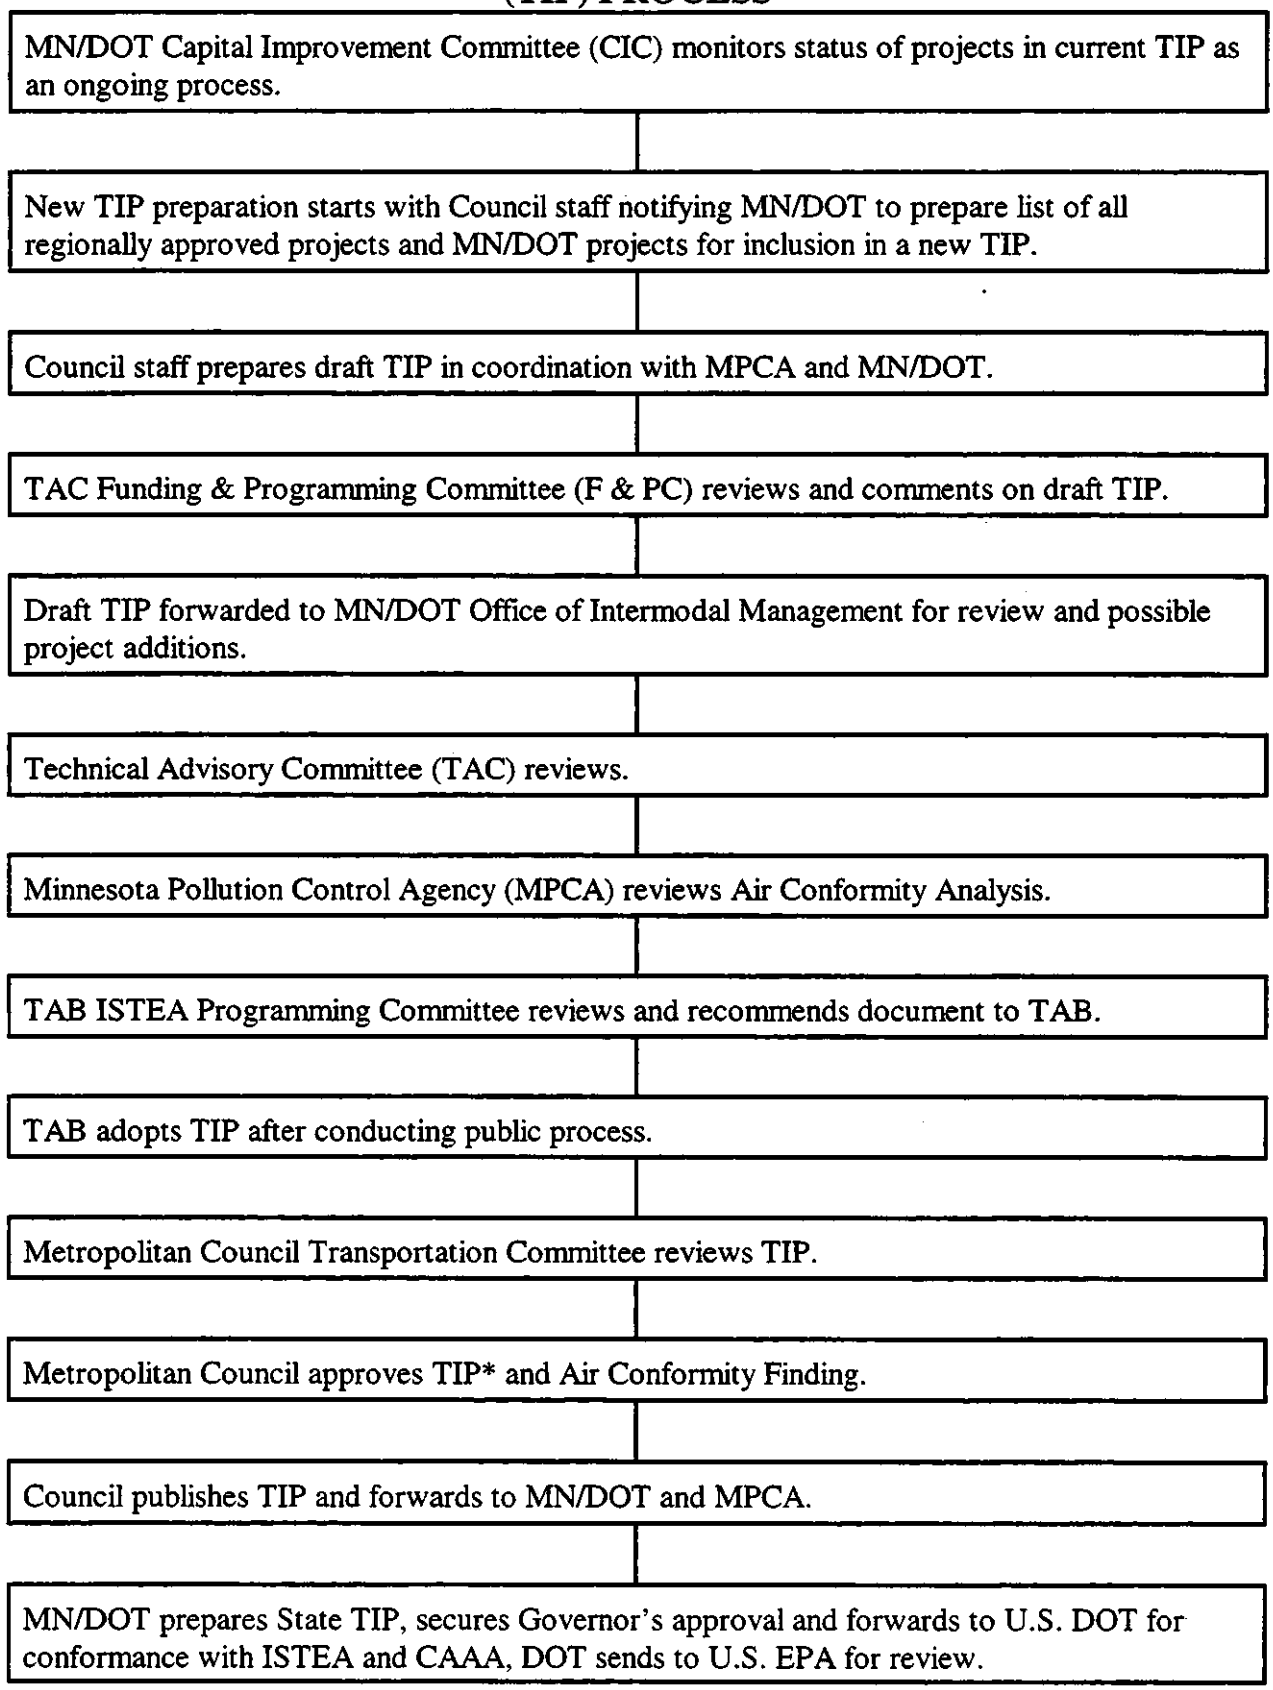
DEVELOPMENT AND CONTENT OF THE TRANSPORTATION IMPROVEMENT PROGRAM

The Transportation Improvement Program process is shown in Figure 2. The TIP is a federally required five year program. The Metropolitan Council and TAB have chosen to prepare a four year document with a major amendment in alternate years. The TIP is an integral part of the overall transportation planning process, a cooperative effort among local units of government and metropolitan and state agencies. This cooperative process uses technical skills and resources of the various agencies, and minimizes duplication by the participants.

The planning base for the TIP comes from the following planning documents:

- The Blueprint sets the overall priorities for regional facilities and services in the Twin Cities Metropolitan Area.
- The Metropolitan Council's 2015 Transportation Development Guide/Policy Plan (TPP) sets overall regional transportation policy and details major long-range transportation plans. This plan was amended in 1995 and addresses ISTEA. Requirements and considerations.

Figure 2
TRANSPORTATION IMPROVEMENT PROGRAM (TIP) PROCESS



*Although final approval rests with Metropolitan Council, TAB's action will be changed only if Council finds it inconsistent with Council policy.

- The Transportation Air Quality Control Plan, prepared by the Metropolitan Council, sets objectives and implementation strategies for transportation improvements to address air quality problems.

- Local comprehensive plans and transportation programs contain transportation elements that must be consistent with the Metropolitan Council's plans for transportation.

The TPP and the Air Quality Control Plan provide a framework for the development of specific projects by Mn/DOT, MCTO, MC, the county and local governmental units and agencies which are responsible for planning, construction and operation of transportation facilities and services. All projects contained in this TIP must be consistent with the Transportation Development Guide/Policy Plan and the transportation Air Quality Control Plan.

The Council and its MCTO identify transit service needs and objectives, planned transit service and capital improvements, and costs and funding sources that help implement the TPP.

Many of the highway construction projects included in this TIP are under Mn/DOT jurisdiction. They originate from ongoing Mn/DOT programming activities and respond to the region's transportation plan. The projects that lead to the completion of the metropolitan highway system, along with the projects on other major arterials, are based on the Council's TPP and on Mn/DOT's transportation planning and programming process.

The TPP is further refined through alternative corridor and location studies. These studies and environmental impact statements lead to specific project recommendations that are included in implementation programs. Other projects, such as those concerned with resurfacing, bridge improvements and safety, arise from continual monitoring and evaluation of existing highway facilities through Mn/DOT's pavement and bridge management plans.

City and county federal aid projects are products of local comprehensive and transportation planning programs, and reflect local and regional priorities. These projects have been determined to be consistent with regional plans before being included in the TIP. Such plans must be consistent with the TPP.

PROGRAM AREAS IN THE TRANSPORTATION IMPROVEMENT PROGRAM

The ISTEA of 1991 establishes a number of highway funding programs. In most cases, transit projects can also be funded through these programs. ISTEA utilizes a number of transit funding programs which are the same as those used in the past.

These program areas are described below.

National Highway System (NHS). The NHS, signed into law on Nov. 28, 1995, consists of 161,000 miles of major roads in the United States. Included are all interstates and a large percentage of urban and rural principal arterials, the defense strategic highway network, and strategic highway connectors. All NHS routes in the Region are eligible to use NHS funds.

Interstate Maintenance (IM). These funds will finance projects to rehabilitate, restore, and resurface the interstate system. Reconstruction is also eligible if it does not add capacity. However, high occupancy vehicles (HOV) and auxiliary lanes can be added.

The Surface Transportation Program (STP). STP is a block grant type program that may be used for any roads (including NHS) that are not functionally classified as local or rural minor collectors. These roads are now collectively referred to as federal-aid roads. Bridge projects paid for with STP funds are not restricted to federal-aid roads but may be on any public road. Transit capital projects are also eligible under this program. Transportation Enhancement Projects are funded as part of this program.

The Congestion Mitigation and Air Quality Improvement Program. CMAQ directs funds toward transportation projects in nonattainment areas for ozone and carbon monoxide (CO). These projects contribute to meeting the attainment of national ambient air quality standards.

Bridge Replacement and Rehabilitation Program. The Bridge Replacement and Rehabilitation Program is continued to provide assistance for any bridge on a public road. The program is basically unchanged from previous years in its formula and requirements.

Hazard Elimination Safety Program. Is continued but has changed in focus to safety at railroad crossings.

FTA Title III Section 5309 (formerly 3) and 5307 (formerly 9) Transit Capital and Operating Assistance Programs. These programs provide assistance with capital and operating costs.

FTA Title III Section 5310 (formerly 16) Program. This program funds the purchase of lift-equipped vehicles by nonprofit organizations which provide transportation for the elderly and handicapped.

FTA Title III Section 5311 (formerly 18) Program. This program is available for operating and capital assistance to areas with less than 50,000 population (small urban and rural programs).

PROJECT CATEGORIES

Mn/DOT has divided the programmed projects into five types for the 1997-2000 TIP. They are:

1. Preservation. Activities required to preserve existing infrastructure, including concrete joint repair, mill and/or overlay, sign replacement, etc. Replacement or revitalization of existing infrastructure, may include minimal capacity/operational improvements.

2. System Management. Projects to improve efficiency and/or operations as well as safety, capacity or air quality.

3. Agreements. Projects entered into by the department and a local unit. The projects vary in nature but benefit both Mn/DOT and the local jurisdiction.

4. Expansion. Major capital improvements which result in new or greatly expanded capabilities of corridors, i.e., new facility on new alignment, land additions in excess of auxiliary lanes, bridge at a new location, widened bridge to include more travel lanes.

5. Intelligent Vehicle Highway System Operational Tests. Projects to illustrate the effectiveness of ITS technology to improve the efficiency, operations, safety, capacity and air quality.

2. SUMMARY OF REGIONAL PLANS AND PRIORITIES

All projects in the TIP are reviewed by the Transportation Advisory Board and the Metropolitan Council for consistency with the Transportation Policy Plan/Development Guide (TPP) and the Air Quality Control Plan. This chapter summarizes the TPP, indicates Council priorities and identifies air quality control measures undertaken in the region. The Council amended the 1993 TPP in May, 1995. This amendment was prepared at the direction of U.S. DOT. The Council has prepared the amendment which is in balance with forecasted revenues over the 20-year planning period and which is in conformity with the CAAA of 1990. The Council held the public hearing on the TPP on April 20, 1995 and adopted the amendment on May 25, 1995. The material below describes the amended plan.

TRANSPORTATION DEVELOPMENT GUIDE/POLICY PLAN

By state law, the Metropolitan Council is responsible for preparing a comprehensive development guide for the Twin Cities Area which includes a multimodal surface transportation chapter and an aviation chapter. The Regional Blueprint (formally the Metropolitan Development and Investment Framework) is the plan that sets a general direction for future development patterns in the region and establishes guidelines for making decisions about major regional facilities, the sewers and highways, that are needed to support the commercial, industrial and residential development of the area.

The focus of the Council's strategy on directing growth in the region is to encourage development to occur within the urban service area. The Council's first priority is to maintain and upgrade existing regional systems throughout the urban service area. The Council will also assign a high priority to maintenance projects that support planned economic development. The Council, local government, and the metropolitan agencies are expected to act jointly to protect the capacity of regional facilities by protecting them from premature and excessive use.

The TPP provides policy direction for planning by government agencies, counties, municipalities and private sector participants involved in the construction and operation of transportation facilities and services in the region. This plan guides metropolitan transportation investments between now and 2015.

The Council uses the TPP to review referrals and development proposals submitted to the Council. The TPP provides direction to the Minnesota Department of Transportation as regional input into the statewide transportation project programming. The TPP includes a 2015 Metropolitan Highway Systems Plan, a 2015 Metropolitan Transit System Plan, (which appear as Figures 3 and 4 in this document), and policies and priorities for regional facilities and services.

The region's transportation plan refers to the broad spectrum of surface transportation modes, i.e., highways, transit, rail, water, bicycle and pedestrian. "Transit" is viewed as a service provided for people traveling as passengers to their destinations, regardless of the type of vehicle (fixed route public bus and light rail, minibus, shared ride, taxi, etc.) or of who provides the service (public or private sector). Major highways and thoroughfares are viewed as travel routes rather than auto and truck routes. These routes are to be designed and managed to encourage people to ride together rather than drive individually to their destinations.

The TPP conforms to the requirements of the 1990 Clean Air Act amendments. A description of the air quality analysis used by the Council to determine conformity is in Appendix B.

FIGURE 3

RECOMMENDED METROPOLITAN HIGHWAY SYSTEM, 2015

● ● ● Right of Way Reserved

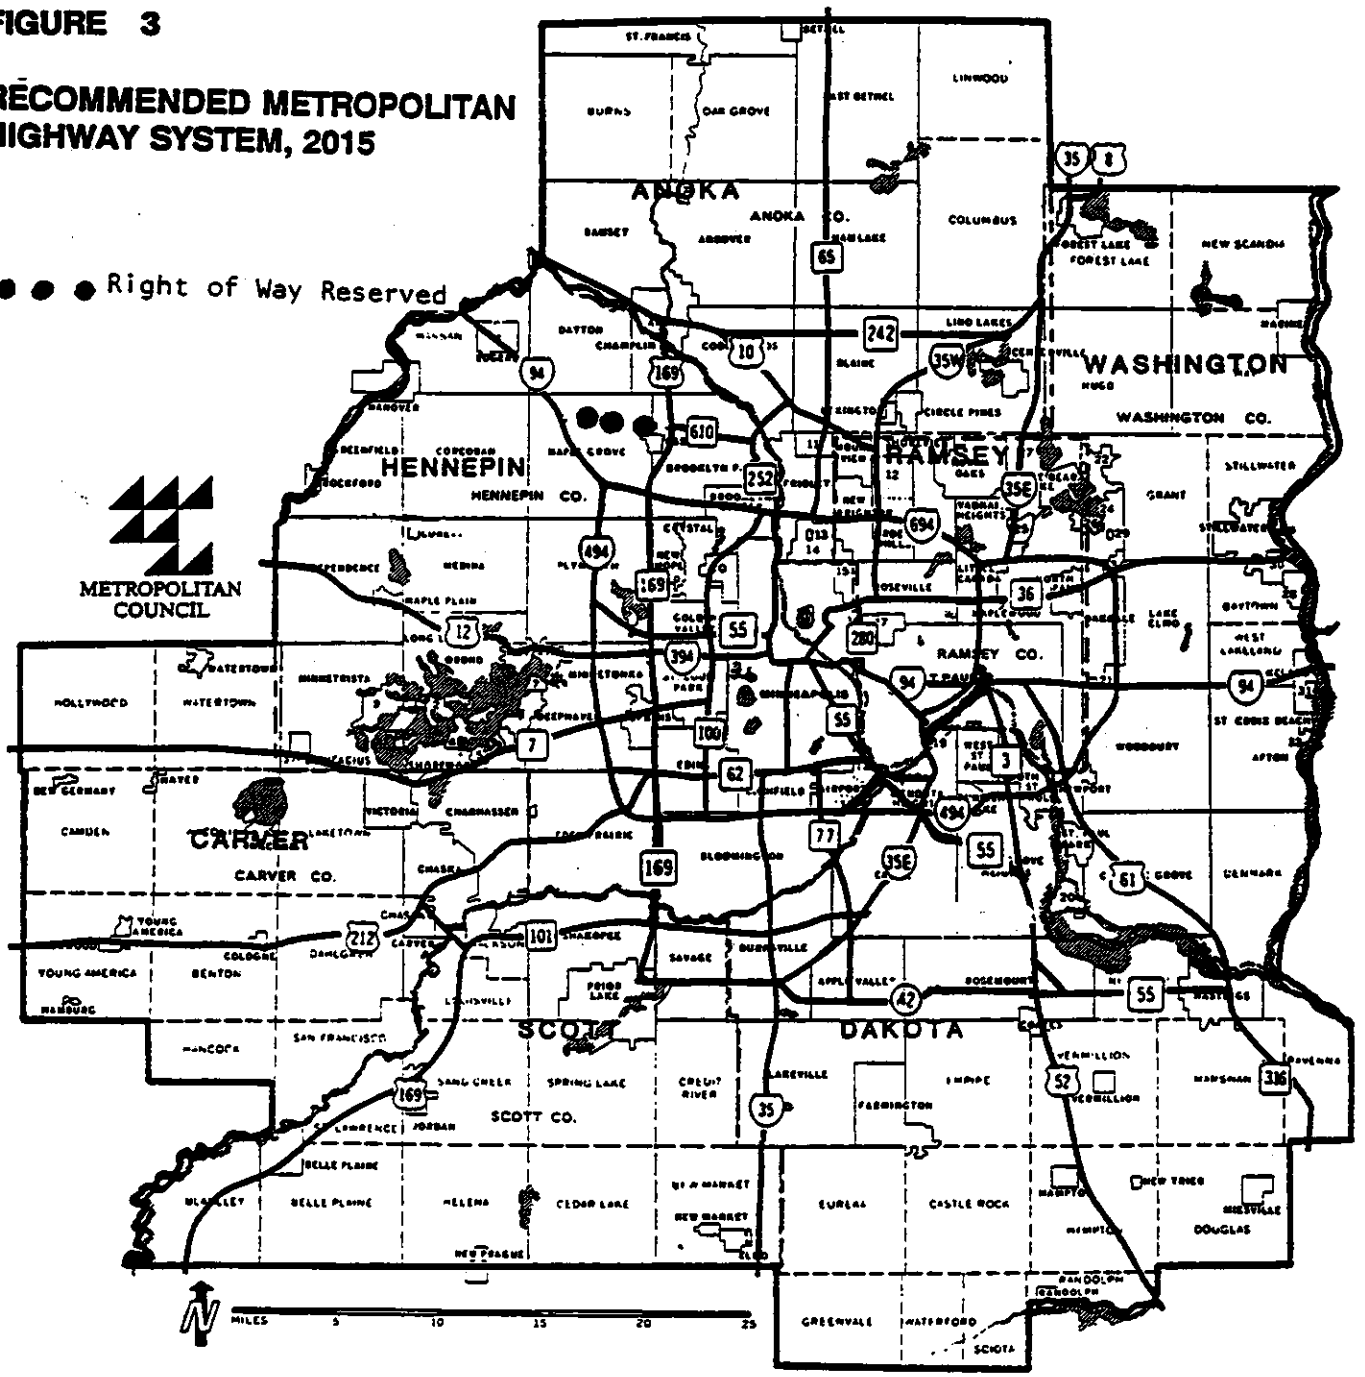


Figure 4
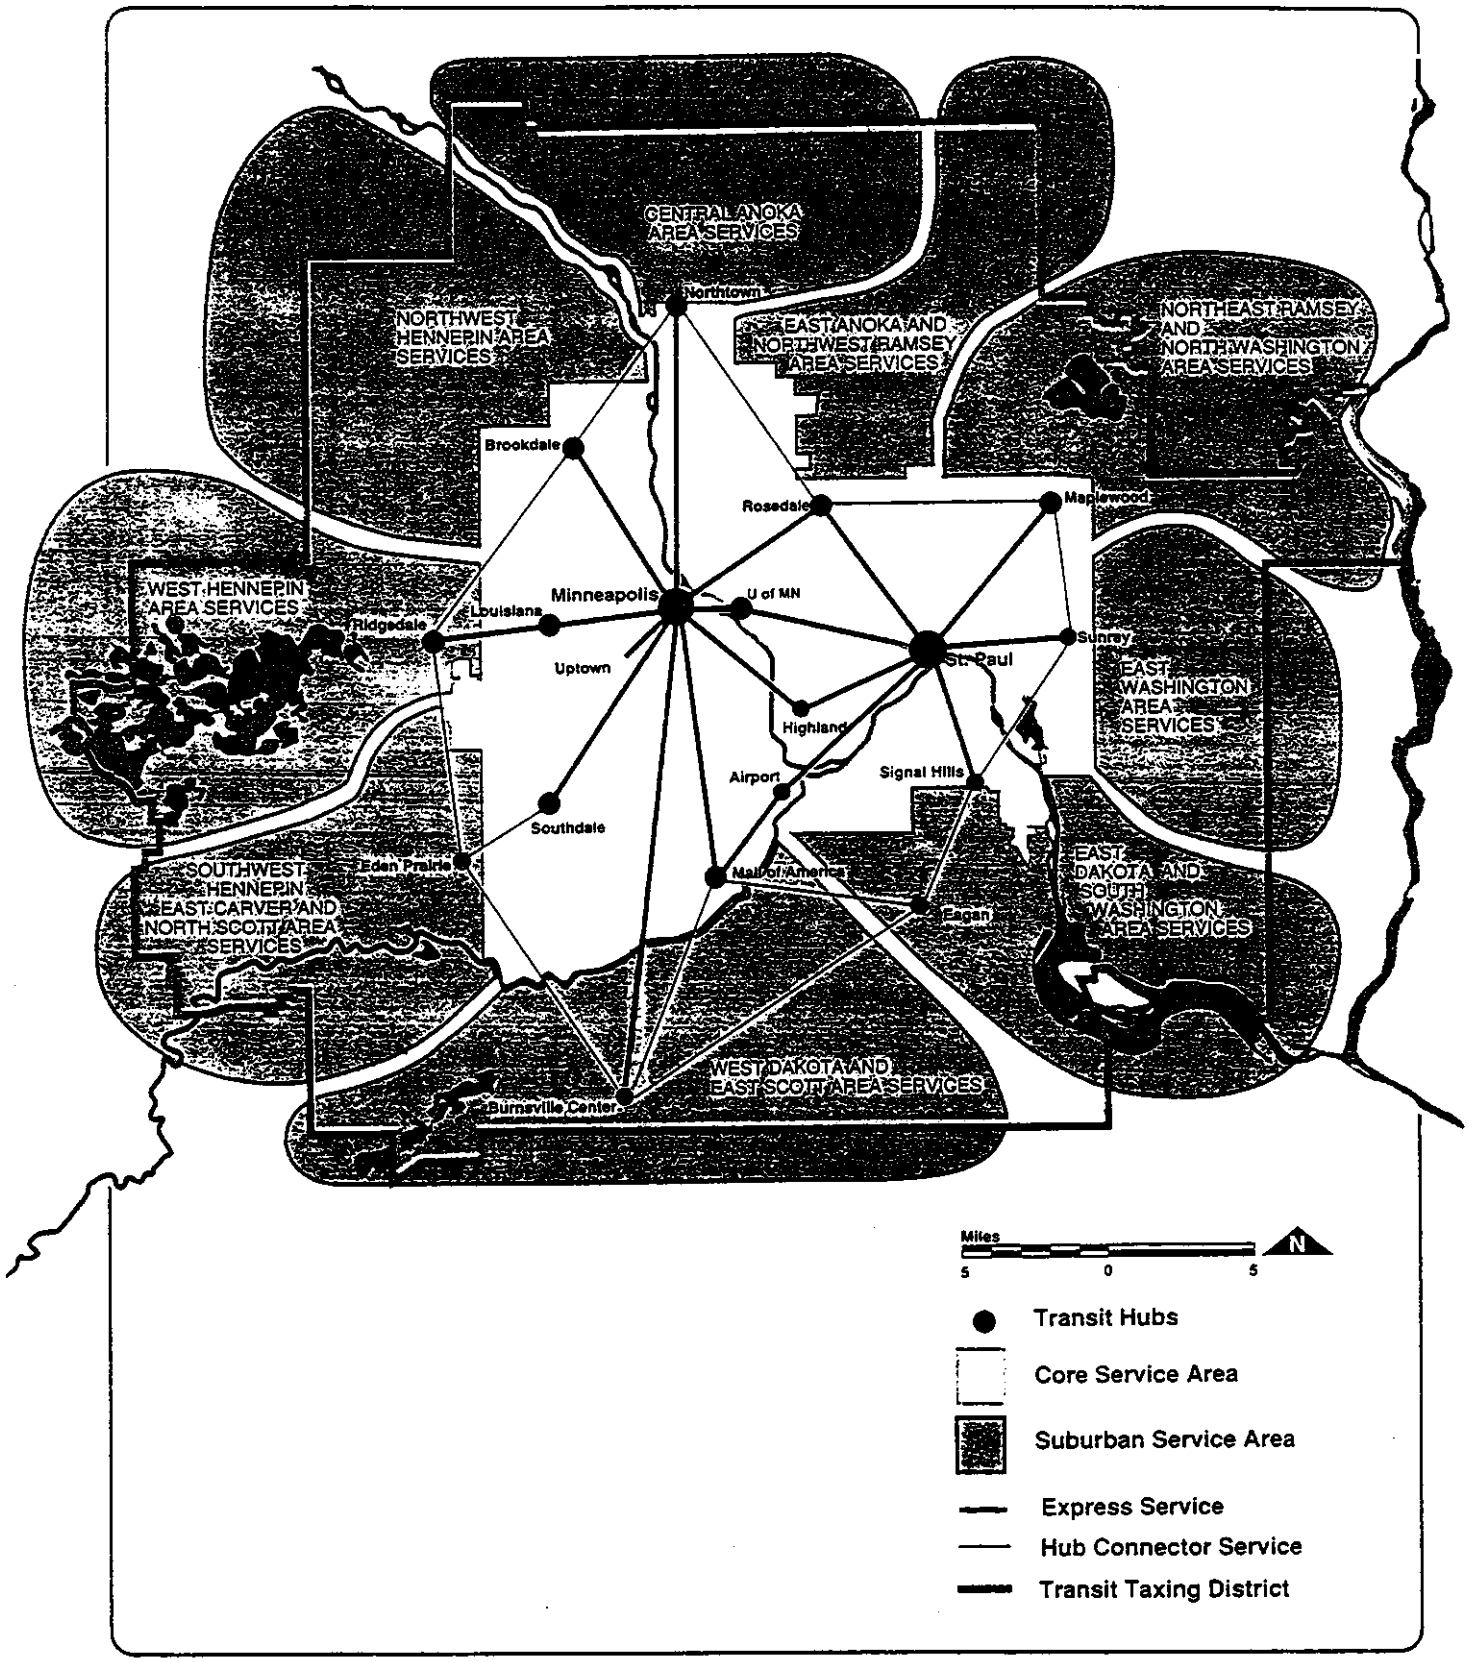
REORGANIZED TRANSIT SYSTEM



The Metropolitan Area's transportation system of highways and transit is key to the region's social and economic vitality. It provides ready access to virtually any location in the region. The transportation system makes it possible for the region's residents to take advantage of a broad range of opportunities for employment, education, shopping, recreation, health care, housing and cultural activities. As a means of conveying goods, services and workers, the transportation system plays a crucial role in supporting the region's economy.

THE HIGHWAY AND TRANSIT SYSTEMS

The metropolitan highway system consists of 657 miles of roadways that include the interstate highway network and other principal arterials, which are the heaviest traveled transportation corridors. These highways closely match the National Highway System in the region. The term "transit" applies to all forms of riding together, regardless of whether the service is provided by public or private operators, whether by organizations or individual vehicle owners, or whether the ridesharing arrangements are structured or informal. Consequently, the metropolitan transit system is seen as comprising a broad range of services that are provided by, among others, MCTO's bus system; private bus companies on regular, scheduled routes; providers for the Metro Mobility program for elderly and disabled persons; car and van pools; and informal ridesharing arrangements. School bus service is, of course, transit service but not part of a metropolitan transit system.

HIGHWAY CONGESTION

Compared to other major metropolitan areas, the Twin Cities transportation system suffers from fewer critical problems. It is clear that if nothing is done to increase the people-moving capacity of the system over the next 20 years, the resulting problems could impair the region's highly prized quality of life and hamper its economic growth.

The greatest demands on the highway system are made by people traveling to and from work. As a result, the system's capacity for moving people from one place to another is largely defined by its ability to handle work trips during peak traffic periods in the morning and afternoon. And because the work trip is essential to the operation of the region's economy, it is an important factor in defining the region's current and future travel needs. Figure 5 illustrates where congestion existed in 1993.

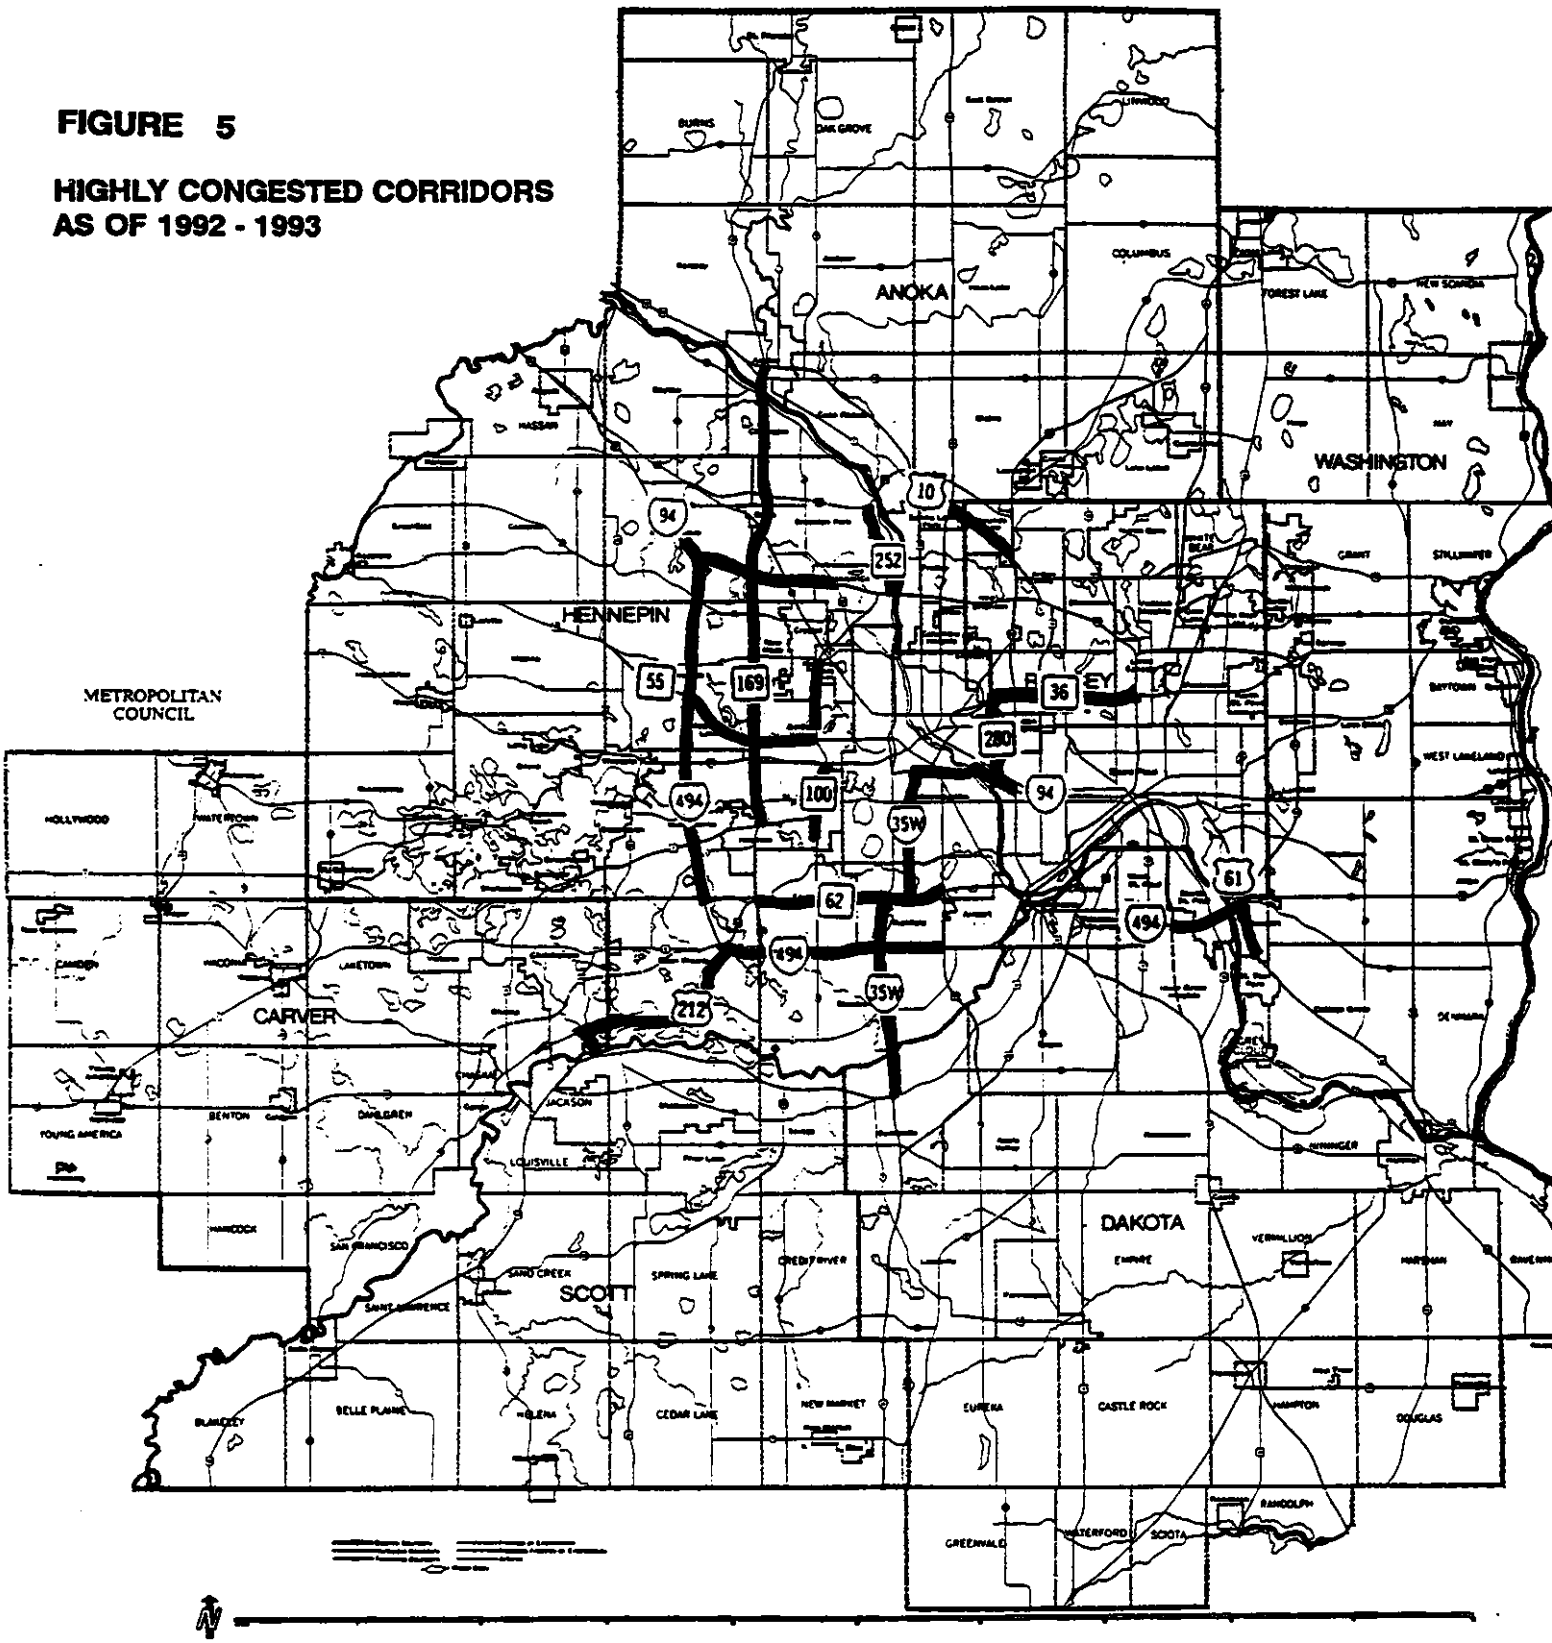
It is already clear that the highway system's current congestion problems will worsen unless steps are taken to deal with them. For example between 1970 and 1992 the number of miles of freeway and severe traffic congestion quadrupled--from 24 miles to 106 miles. If nothing is done to increase the people-moving capacity of the system, the number of miles experiencing severe congestion will nearly double between now and the year 2015 to 200 miles. At the same time, many regional highways are reaching the end of their design life, so that by the year 2015 most of the metropolitan highway system will require major rebuilding.

THE CHALLENGE FOR TRANSIT

While the highway system struggles with too many vehicles, the transit system faces the problem of too few passengers and people who are willing to share rides. The region's bus system has experienced a steadily declining ridership between 1980 and 1991, only beginning to increase in 1992 and 1993, and fewer commuters are sharing rides in cars or vans. The key challenge facing transit--all forms of sharing rides--is to offer an attractive alternative to driving alone. That means it must better serve suburban areas, where most new jobs are being created. It must be able to expand its capacity to serve commuters, which it does well now, to downtown Minneapolis and St. Paul so these metropolitan centers will continue to be economically viable. It must accommodate the growing

FIGURE 5

HIGHLY CONGESTED CORRIDORS AS OF 1992 - 1993



demand for transit services by elderly and disabled people and the needs of people who don't have a car. It must provide high-quality, convenient service with attractive facilities and equipment and offer travel times that compare favorably with driving alone. It must do all this at reasonable cost.

GOALS AND STRATEGIES

In its TPP, the Council approaches these challenges with several important considerations in mind.

- First, the guide seeks to maintain the good access to regional opportunities that the transportation system affords now, even with a large growth in demand expected in the future. That means congestion would not be permitted to deteriorate to levels that other metropolitan areas are now experiencing. The key is to increase the number of people the system can carry without greatly increasing the number of vehicles to move them.

- The guide recognizes that the region cannot meet growing travel demands by simply building new roadways or adding lanes to existing ones. In short, the region cannot build its way out of congestion. Demand is growing much faster than the amount of available funds. The 1990 Travel Behavior Inventory found that vehicle trips increased from 5 million in 1970 to 8.86 million in 1990, an increase of 74 percent. During the same time, the population of the region increased only 19 percent. Even if the money were available to build all the highway facilities needed to meet future demand, such projects would severely disrupt established residential neighborhoods and deprive cities of much-needed property tax base.

- The metropolitan highway system represents a huge dollar investment that is costly to rebuild and expand. Consequently, the region needs to manage the highway system to make it last as long as possible and to get the most out of its people-carrying capacity.

- The region's transit system (including ridesharing) must be strengthened. The TPP seeks to make sharing rides, including transit modes like buses, circulators, and light rail transit, more competitive with the single-occupant auto. The TPP emphasizes the use of ridesharing, conventional transit and other travel demand management approaches to reduce the need for building additional freeway lanes and to reduce traffic congestion during rush hour.

- Increasing the number of people who use all transit services will require the involvement of local governments and the private sector to create incentives for sharing rides. Examples of such incentives include preferential parking for car poolers and taxing employers for each parking space reserved for a single-occupant auto.

- Future development projects will need to be managed so they do not overload the metropolitan highway system. Coordination of land use with available transportation capacity is also needed along parts of the system that now experience congestion. This effort will require close cooperation among local governments, developers, major employers, and regional and state agencies responsible for transportation planning.

Role of Transit

- The Council's transit system plan reaffirms the importance of transit in satisfying the overall transportation needs of the region. This commitment includes both service improvements and reorganization of the bus system and capital investments to enhance transit's attractiveness and maximize the people-carrying capacity of the transportation system. The system will be strengthened by adding five additional high occupant vehicle lanes by the year 2015.

- Transit is important because it serves people who don't have other means of transportation. It also

reduces dependence on the single-occupant automobile and helps protect the region from unforeseen contingencies such as fuel shortages. It helps support higher-density land uses such as those found in downtown Minneapolis and St. Paul and in other major business concentrations. These areas can't be served only by single-occupant cars because of the capacity limitations of highways, streets and parking facilities and because of environmental constraints, such as air quality limits. Transit reduces the need for additional highway capacity particularly in areas where expanding roadways or building new ones would be difficult and expensive. Transit supports the environment by helping reduce trips and resultant automobile emissions.

- Different types of transit services are needed for different geographic areas and different groups of transit riders. Ridesharing should be used regionwide with an emphasis on travel demand management incentives in congested corridors and areas where regular-route service is minimal. As population and employment continue to disperse and as congestion levels increase, ridesharing will continue to be the most common form of multi-occupant travel.

Reorganized Transit System

- The transit plan envisions an improved, reorganized system to meet the changing travel needs of the region. It calls for a hub-and-spoke system, where local transit routes would link with express buses, suburban circulators, carpools and services for elderly and disabled persons. All types of services would be expanded and enhanced. The transit plan provides for increased suburb-to-suburb, reverse-commute, paratransit, and frequently operating local and express service needs to and within the inner part of the region. (Figure 4) Since the development of the Transportation Policy Plan, a transit redesign study has been conducted and summary recommendations were presented to the Council in early April, 1996, which will influence how transit service will be delivered in the Twin Cities region.

HOV Lanes

- The plan recommends the building of four high-occupancy vehicle (HOV) lanes in the the following corridors: I-35W south of Minneapolis, I-94 north of Minneapolis, I-94 east of St. Paul, and I-494 from the airport to I-394. Additional park/ride and HOV bypasses of meters and bottlenecks are recommended. (Figure 6)

Mobility for Elderly and Disabled People

- A variety of service-delivery methods are necessary to meet the transportation needs of elderly and disabled people. They include lift-equipped buses and vans, taxis and volunteer drivers, regular route buses, both accessible and non accessible as well as carpool opportunities. Services are provided by Metro Mobility within the urban service area and by local programs and social services throughout the region. A combination of higher travel demand and increasing numbers of elderly people over the next 23 years will require increased commitment to transportation for elderly and disabled people.

Circulator Transit

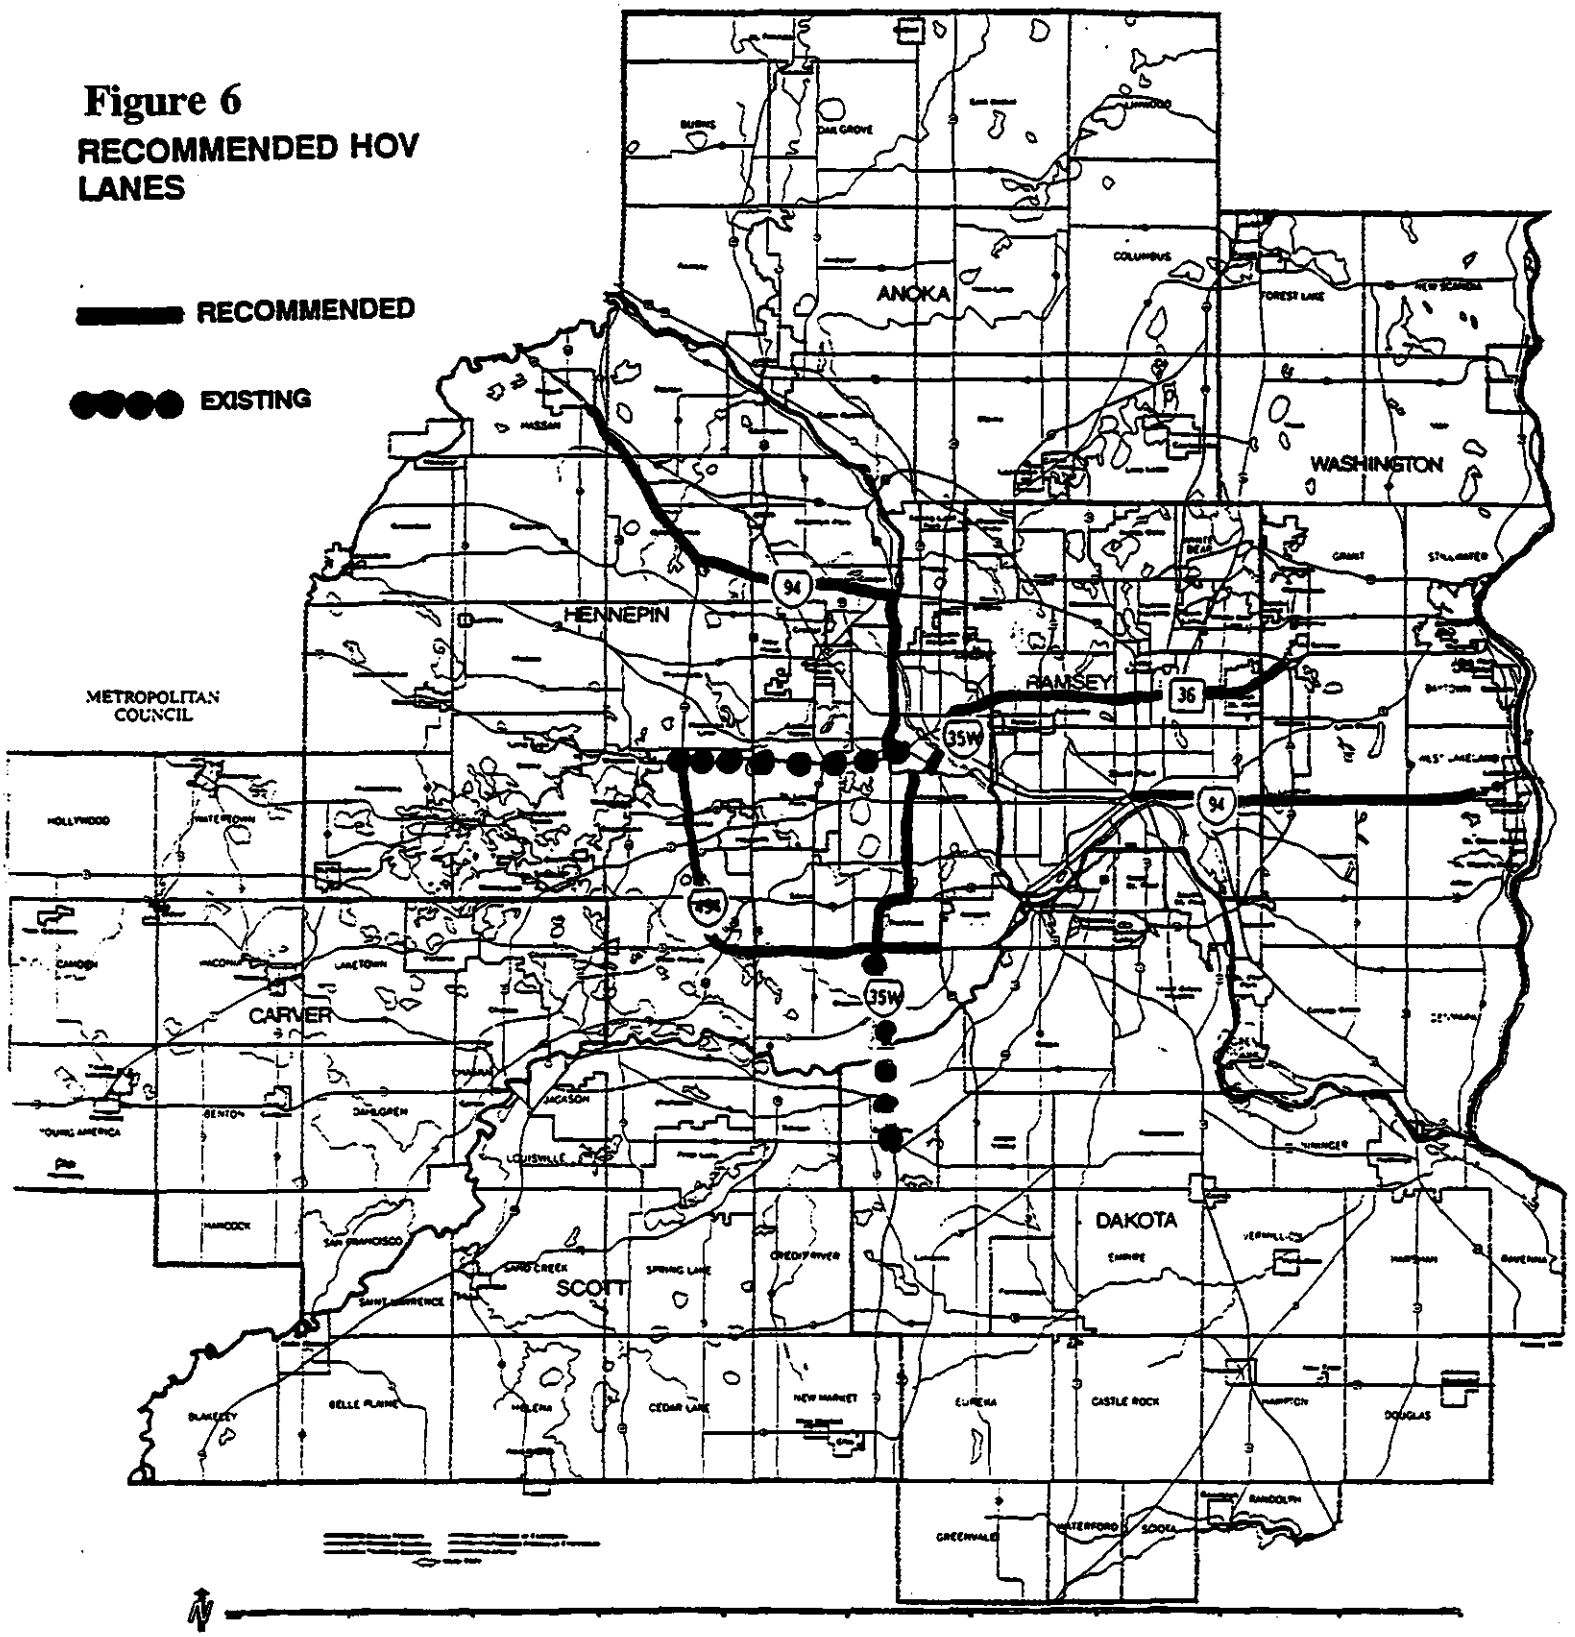
- The transit system plan also supports maintenance of the existing transit services provided in freestanding growth centers, and the continuance of community based circulators, and rural (county) programs. The transit plan advocates increases in community-based services in small urban and suburban communities and envisions addition of circulator services within regional business concentrations and in downtown Minneapolis and St. Paul.

Pedestrian and Bicyclist Needs

- The needs of pedestrians and bicyclists are emphasized as important to a multimodal regional transportation system. Development patterns, transportation infrastructure, and urban design

Figure 6

RECOMMENDED HOV LANES



should respect the need for communities that emphasize people, and begin to de-emphasize automobile orientation.

The Highway System

- The region needs to address four major challenges in maintaining good regional transportation access through 2015 via the metropolitan highway system. They are 1) significant increases in travel demand; 2) increasing costs associated with maintenance of the aging highway system; 3) social, physical and political impacts of adding capacity; and 4) insufficient funding. The metropolitan highway system plan calls for a variety of actions to address these challenges.

  The metropolitan highway system plan calls for managing the system and travel demand and for providing additional facilities that will provide enough additional capacity to optimize the people-carrying capacity of the system. (Figure 3)

  To accomplish this, the following strategies need to be put in place:

  1. The Minnesota Department of Transportation is encouraged to meter freeway entrance ramps on a system-wide basis. This can increase roadway capacity by about 11 percent and can regulate traffic flow at locations generating excessive traffic. Freeway entrance ramps for exclusive use by high-occupancy vehicles (buses, car pools, van pools) are recommended so they bypass the metering systems. Ramp meters and high-occupancy vehicle bypasses will increase capacity, improve safety, provide incentives for people to share rides and use buses, and should protect the metropolitan highway system from additional demand brought about by unforecasted development. As discussed in the policy section and the highway system plan, eventually all access-controlled highways in the urban service area should be fully metered. Mainline metering also needs to be considered.

  2. High-occupancy vehicle (HOV) lanes should be provided where additional lane capacity is needed. Any additional lanes that are built on highways of four lanes or more should be HOV lanes, not lanes for mixed traffic. HOV lanes are especially critical in corridors where high travel demand exists and where significant development has occurred adjacent to the highway. Conversion of existing lanes to HOV lanes should also be considered. Four corridors have been recommended for HOV lanes. (Figure 6)

  3. Local governments should work with the Council to protect the metropolitan highway system. Communities should evaluate the impact of land use decisions on the transportation system and on adjacent communities. The metropolitan highway system should be protected from traffic generated by unplanned development that exceed the system's capacity. In comprehensive plans, local governments should address the need to create an environment favorable to pooling and bus use and to encourage travel during off peak, instead of peak, hours. Comprehensive plans should conform to the Council's development forecasts and highway design requirements. The Council will issue systems statements to local units of government indicating what local governments need to address in comprehensive plans.

ADEQUACY OF FINANCIAL RESOURCES FOR MAINTAINING AND OPERATING THE EXISTING AND PLANNED HIGHWAY AND TRANSIT SYSTEM

Federal regulations require that the TIP demonstrate the consistency of proposed transportation investments with already available and projected sources of revenue. The estimated revenue from existing and proposed funding sources that can reasonably be expected to be available for transportation uses must be adequate to meet the estimated costs of constructing, maintaining and operating the total (existing plus planned) transportation system. The highway system is discussed first.

This section focuses on the adequacy of financial resources for maintaining the existing and planned highway system and to maintain and operate the transit component.

The approach taken for this section was to 1) define the highway system included in the transportation plan, 2) determine the current costs of maintaining that system and 3) comparing those costs with currently available financial resources. The highway system in the TPP is the existing metropolitan highway system comprised of principal arterials, and "A" minor arterials designated by the TAB. These two systems are eligible for federal transportation funding.

Estimates of the 1995 cost for routine maintenance and lifecycle treatments included here were obtained by updating cost estimates developed in the *Phase II Final Report of the Highway Jurisdiction Task Force* adopted by the TAB in September, 1984. That report developed costs per mile for routine maintenance and lifecycle treatments by functional class (principal arterial, minor arterial, collector, local) and by location inside or outside the 1976 Federal Aid Urban boundary. Routine maintenance includes patching, joint and crack filling, slope repair, drainage structure clearing, cutting and clearing vegetation, sweeping and clearing debris, striping, snow and ice control and pavement repairs of less than 500 continuous feet. Lifecycle treatments include periodic application of bituminous overlays, seal treatments, milling, crack routing and filling and base repair of 500 or more continuous feet. The frequency of these treatments is related to the volume and type of vehicles using a roadway (wear) and the impact of the elements (time).

Lifecycle treatment costs were updated to 1995 using the Minnesota construction cost index for surfacing tabulated by MnDOT. Based on this index, the costs per mile in the 1984 report were inflated by 9.5 percent (0.76 percent per year). Routine maintenance costs were updated to 1995 using the Consumer Price Index, since labor is such a large component of these costs. Routine maintenance costs per mile in the 1984 report were inflated by 44.8 percent (3.14 percent per year).

Estimates of available financial resources focus on state highway user tax distribution fund revenues available to the metro district of MnDOT from the trunk highway fund for maintenance of state highways in the seven-county metropolitan area and available to the seven counties through county state aid apportionments for county state aid highways. County State Aid Highway funding provides base funding to maintain county highways, but these allocations are not the only financial resources available to counties. Counties spend significant amounts of their own source of funds on county highways. In addition, revenues are available to the twelve municipalities with "A" minor arterial segments through municipal state aid apportionments, but because the portion of the "A" minor arterial system under the jurisdiction of these municipalities is minor, these financial resources are not considered in the comparison.

Recorded in Table 1 are the mileage cost and resource information. From this data it is evident that MnDOT's and the counties' financial resources are adequate to maintain the highway system.

Table 1

Comparison of 1995 Routine Maintenance and Lifecycle Treatment Costs for Principal Arterials and "A" Minor Arterials with Financial Resources Available to MnDOT and Counties in the Seven-County Metropolitan Area				
	Mileage	Routine Maintenance	Lifecycle Treatment	Combined
Estimated 1995 Cost per Mile:				
Urban Principal Arterial		$28,100	$20,000	$48,000
Urban Minor Arterial		10,300	10,000	20,300
State Highways (MnDOT)				
Estimated Need:				
Principal Arterials	568	$15,961,000	$11,360,000	$27,321,000
"A" Minor Arterials	476	4,903,000	4,760,000	9,963,000
Total	1,044	20,864,000	16,120,000	36,984,000
Estimated Resources		29,159,000[2]	17,450,000[3]	46,609,000
Resources/Need		140%	108%	126%
County Highways				
Estimated Need:				
Principal Arterials	45	$1,265,000	$900,000	$2,165,000
"A" Minor Arterials	1,136	11,701,000	11,360,000	23,061,000
Total	1,181	12,966,000	12,260,000	25,226,000
Estimated Resources - CSAH		10,591,485[4]	3,000,000	13,591,485[5]
Estimated Resource - Property Tax		2,374,515	9,260,000	11,634,515
Resources/Need		100%	100%	100%

Total County State Aid allocations to the seven metro area counties in 1995 are listed below.

Table 1 assumes that a portion of the total allocations is available for routine maintenance and lifecycle treatments on principal and "A" minor arterials, based on the proportion of the mileage for those highways to total CSAH mileage. This is a conservative assumption, since counties are likely to spend more per mile on the principal and "A" minor arterials than on other minor arterials and collectors on their CSAH system.

2. 1995 MN/DOT 8-county metro district maintenance budget ($33.7 million) adjusted to reflect 7-county area and principal/"A" minor arterial proportion of total state mileage.

3. On-third of estimated federal and state funds available for preservation of the metro highway system ($52.35 million per year).

4. 1995 maintenance allotment for seven counties (40 percent of total CSAH allocation). Counties can spend more than this amount of maintenance.

5. 1995 CSAH allocation to seven metro area counties, adjusted to reflect the principal/"A" minor arterial mileage as a proportion of total CSAH mileage.

Table 2
1995 CSAH ALLOCATIONS

County	1995 CSAH Allocation
Anoka	$ 4,228,364
Carver	2,319,404
Dakota	5,101,976
Hennepin	16,984,685
Ramsey	8,057,535
Scott	2,677,111
Washington	3,338,526
Total CSAH Allocation	$42,707,601
Assumed Percent Available for Principal/"A" Minor Arterials	62%
Amount Available for Principal/"A" Minor Arterials	$26,478,714[6]

Transit System Operating Costs and Funding

This section presents the cost of operating current levels of transit service and the resources available to fund these costs. General service categories for the regional transit system include:

- Regular Route Services. Included in this category are routes provided by MCTO, replacement service (opt-out) programs, and private operators under contract to the Council.
- Metro Mobility Service. The regional paratransit service for persons with disabilities that implements a major part of the region's ADA required paratransit plan.
- Community Based Programs. These are paratransit services provided by counties and cities which receive funding assistance from the Council. The Anoka, Dakota and Washington County services are part of the regional paratransit plan required under ADA.
- Travel Demand Management Services (TDM). Included in this category are rideshare and other programs aimed at reducing single occupant vehicle trips.

6. Distribution:

Routine Maintenance 40%	=	10,591,485
Life Cycle Cost (Estimate)	=	3 ,000,000
Expansion, Reconstruction, Local Match	=	12,887,229
		26,478,714

The costs to operate these services for 1995 are recorded below.

Table 3
1995 Transit System Operating Costs
($ millions)

Regular Route	$ 145.7
Metro Mobility	18.1*
Community Based Programs	3.2*
TDM Programs	1.1
Total	$ 168.1

* Only the subsidy level is shown here.

Funding for transit system operating costs is received from regional, state, and federal sources (Table 4). The following describes assumptions concern level of funding from these sources.

- Fare Revenue. Nearly all system-wide fare revenue is collected on regular routes. Significant increases in regular route fares occurred in 1991 and again in 1993. Together, these increases resulted in a doubling of the base fare from $.50 to $1.00. No additional regular route fare increases are planned in the short term.

- Property Tax. The Metropolitan Council levies a transit property tax for transit operations. The amount of this levy is set by statute. In the past two years, the total levy has grown by less than two percent annually. Future annual increases are projected in the range of two to three percent.

- State Funding. Projections of future levels of state assistance are based on funding proposed in the Governor's budget for the 1996-1997 biennium. The State is committed to provide all operating subsidy needed for the ADA required regional paratransit services in the region.

- Federal Funding. Federal operating assistance is obtained from formula funding programs and ISTEA grants. Although uncertainties exist about future levels of federal transit assistance, it is assumed that funding will continue at current levels.

Table 4
1995 Transit System Funding
($ millions)

Fare Revenue	$42.3
Property Tax	66.3
State	40.2
Federal	7.6
Interest/Misc.	8.5
Fund Balance	3.2
Total	$168.1

As in the case with all large public transit systems, operation must be subsidized and therefore there is a constant pressure to find additional revenues. The Council is strongly committed to providing a viable transit service and has begun a transit redesign study to improve the efficiency of operations.

FINANCIAL PLAN

ISTEA requires the regional plan includes a financial plan that illustrates the recommended improvements and services are in line with the reasonably expected financial resources. In turn, the TIP needs to reflect and be consistent with the financial plan. The region, working closely with Mn/DOT, prepared an estimate of the financial resources available to preserve, manage, and enhance the region's transit and highway system over the next 20 years. The 20 year average is made up of two separate estimates; one for the years 1996 to 1998 and the other 1999 to 2015. The 1996 to 1998 figures are those used to develop this TIP for this period and closely reflects the present level of funds available to the region from a variety of sources. The 1999 to 2015 figures parallel this estimate of funding levels, but reflects some what different assumptions which are described below and recorded in Table 5.

The Title I ISTEA funds and state trunk highway funds have been established by Mn/DOT as the target levels the region should use as it prepares the 1997-2000 TIP. In addition, the federal funds will generate a local match of over $7 million annually. Due to the definition of region, Mn/DOT uses to establish targets, a deduction is required to reflect the funds available to only the seven metropolitan area counties. The resulting annual total is $169 million. (These figures were used to develop the 1995 TPP.) The current target figures are found in Table 11.)

The same sources of revenue for 1999 to 2015 will generate approximately $195 million annually. These estimates are based on Mn/DOT analysis. A key assumption is that ISTEA will be funded at 100% of the authorization level and that certain "hold backs" Mn/DOT has imposed in the past, would be removed. These include, for example, hold backs for the cost of engineering and project contingencies.

The transit funds from ISTEA Title III are also recorded next in Table 5. The three year estimates are held constant for the 1999 to 2015 period in all cases except for Section 9. The 1996 figure used as the basis for the 1996-1998 period has been established by federal authorization at 9.6 million. This level was reduced for the 1995-2015 period in light of the congressional debate presently taking place.

The last category of funds reflect the region's funding for transit capital available from bonding paid back from a regional property tax levy. Both historical and future budgets were analyzed to estimate an appropriate level. The five year historical average for the bond principle was approximately $13,340,000. The five year annual projection now being used in developing the budget is $25,000,000. The ten year average that results using these two figures is $19 million. Because the budget now being prepared for presentation to the Legislature will extend to 1998, the higher figure was used, but only for the next three years. The ten year average was used for the period 1999 to 2015.

In accordance with ISTEA direction Mn/DOT has closely analyzed the future potential of federal and state funds that will be available to the state and in turn the region. The conclusion of that analysis is that the historic levels of increases projected into the future will only keep pace with inflation and compensate for improved fuel efficiency of new cars and trucks. Therefore, the funding levels shown for the 20 year period indicate no gain in real purchasing power.

COMPARISON OF CAPITAL RESOURCES WITH REGIONAL CAPITAL PRIORITIES

The main focus of the 20-year amended regional plan is to match the available resources with an appropriate set of priority projects. In turn, these projects have been used over the next 20 years to evaluate air quality conformity for the region.

The major projects and project categories to be funded have been described in the plan. These are summarized in Table 6. Specific short term projects are identified in Appendix O of the TPP which was taken from the 1995-1997 TIP. Projects to be funded for 1998-2000 are found in Appendix P of the TPP. The projects included in this TIP are consistent with the projects specifically identified in the plan. The comparison of the annual revenues available for 1996 to 2015 period (as recorded in Table 6 to the average capital requirements from Table 5) illustrates that capital resources are under spent by approximately $20 million per year or approximately $400 million for the 20 year planning horizon. Clearly the Plan is in fiscal balance with reasonable expected resources.

The Council has deliberately restricted major capacity expansions of both the transit and highway system to achieve this balance. This does not mean some or all of these capacity increases are not needed at some time in the future. The Council will under take a complete revision to the transportation plan to be completed by the end of 1996 to respond to the new Regional Blueprint. That effort will once again visit the capacity the region needs for both transit and highways. The non-allocated $400 million capital funds are available to implement additional priorities that may be defined during that exercise. Should these funds not be adequate then the Council will have to once again examine the categories and project priorities reflected in this amendment and summarized in Table 6.

In conclusion, the region has provided itself with some flexibility to provide for additional capital expenditures, but there are a number of reasons to believe these excess funds will not be adequate to address all the additional needs. If this is true, then the region will re-examine the commitments it has made in the TPP and it will continue to seek added funds.

Table 5
ESTIMATE OF REVENUES AVAILABLE FOR CAPITAL INVESTMENTS
1996-2015

	1996-1998 Funding Estimate	1999-2015 Funding Level (Revision Based on Mn/DOT Analysis 2/16/95*)
Historic Capital Funds for Highways		
Federal funds available to 8-county region according to Mn/DOT STIP Guidance (Title I)	$ 99m	$ 116.1m
State trunk highway funds available to 8-county region according to Mn/DOT STIP Guidance	65m	73.1m
Local funds to match federal funds.	$ 7.45**	$ 8.6m**
	$ 171.45	$ 197.8m
Reduction of funds to reflect 7-county region. • Chisago Co. represents 1.4% of 8-county population in 1994	-2.4m	-2.77m
	SUBTOTAL $ 169.05m	SUBTOTAL $ 195.03m
Historic Transit Capital Funds		
Federal Transit Funds (Title III)		
• Section 3 (10-year average)	$ 2.5m	$ 2.5m
• Section 9 (1996 funds)	9.6m	5.0m
• Section 16 (same level as 1996,1997)	0.135	0.135
• Section 26 (same as 1995 level)	0.5m	0.5m
	SUBTOTAL $12.735m	SUBTOTAL $ 8.135m
State Funds • None, Title III Section 16 funds are administered by State	–	–
Local/Regional Transit Capital Funds • Regional Bonding (5-year historic average of Principal excluding interest and 5 year projection of principal)	$ 25.0m	$ 19.170m
	TOTAL $ 206.785m	TOTAL $ 222.335m
	x 3	x 17
	620.355	3779.695
		+ 620.355
20-YEAR TOTAL		4400.05
AVERAGE ANNUAL LEVEL		$ 220.0m

* The basis of these estimates are explained in memorandum from Jon Bloom, Mn/DOT. 2/16/95

** The local share would be contributed by cities, counties and other sponsors of projects that receive federal funds.

TABLE 6
TPP FINANCIAL COMMITMENTS 1996 to 2015

Trunk Highway (TH) System-wide Life Cycle Preservation	$1,038,000,000
Special Preservation Needs Required due to Major Project Delays, will Meet Existing Design Standards	$1,081,000,000
Special Management Needs Required input due to Major Project Delays	$138,000,000
TH System-wide Management	$200,000,000
Major Capacity Projects	$461,000,000
"A" Minor Arterial Improvements	$324,000,000
Transit Improvements	$522,000,000
Enhancements and Alternative Modes	$200,000,000
Total	$3,964,000,000
20-Year Average	$198,200,000

TRANSPORTATION AIR QUALITY CONTROL PLAN

The Metropolitan Council's Transportation Air Quality Control Plan (TAQCP), a supplement to the TPP, sets forth three principal objectives: to attain National Ambient Air Quality Standards (NAAQS) for carbon monoxide (CO) and ozone; to implement transportation systems management (TSM) strategies that effectively contribute to air quality attainment and maintenance; and to meet federal and state air quality standards in the most economical and equitable manner. The Twin Cities area meets the ozone standard but is still a nonattainment area for CO. Planning for control of carbon monoxide pollution caused by transportation sources in the Twin Cities Metropolitan Area is the responsibility of the Metropolitan Council as the Metropolitan Planning Organiztion (MPO). The TAQCP specifies strategies to improve the management of the region's transportation system, based on an analysis of the air quality problems in the seven-county Twin Cities area.

The 1977 Clean Air Act Amendment (CAAA) requires a State Implementation Plan (SIP) for air quality for all areas that have not attained the NAAQS. The 1990 Clean Air Act Amendment (CAAA) retained this requirement. The SIP is a planning document prepared by the Minnesota Pollution Control Agency (MPCA), and submitted by the its Commissioner as the Governor's representative. The SIP contains the programs and plans that will result in achievement of the NAAQS in areas currently not meeting standards ("nonattainment") for any pollutant covered by the NAAQS. The SIP serves as the state's legally binding commitment to actions that will reduce or eliminate air quality problems.

The TAQCP and the SIP contain the same measures to control CO. All federally approved or financially funded functions must "conform" to the SIP, and be consistent with the TPP and other officially adopted transportation plans of the MPOs under the 1977 and 1990 Clean Air Act Amendments. MPOs can only legally approve projects, plans, or programs that conform to the SIP.

CONFORMITY TO THE CLEAN AIR ACT AMENDMENTS

Conformity Determination Based on November 1993 Final Rule

The U. S. Environmental Protection Agency (EPA), in accordance with requirements of the CAAA, issued a final transportation conformity rule in November, 1993. As described in the rule, the MPO must make a conformity determination on transportation plans and programs for nonattainment areas, including federally funded or approved projects, as well as non-federal projects which are regionally significant. The MPO prepared the 1996-98 TIP following the requirements of the final conformity rule. A consultation process was followed, involving the Minnesota Pollution Control Agency (MPCA), Mn/DOT, U.S.DOT and the Council, as described in the provision of the interagency consultation process.

Projects Included in TIP Conformity Analysis

The TIP conformity analysis involves review of all federally funded or approved highway and transit projects, all state trunk highway projects, and all projects which meet the federal definition of regionally significant (see Appendix B) in the Twin Cities nonattainment area. Certain project types will not have regional or local emissions impact. The TIP project tables annotate the projects "exempt" from regional emission analysis with a code under the column "AQ," corresponding to the appropriate category listed in Appendix C. Certain types of exempt projects may require a hotspot analysis. Those projects which are not exempt and can be modeled in the regional network used for computer modeling, are included in the regional emissions analysis for the TIP. In addition, those projects in the portion of Wright County and New Prague within the nonattainment area are also included as appropriate in the analysis as documented in Appendix B.

Conformity of the TIP

The TIP has been found to conform to the broad intentions of the CAAA and to the specific requirements of the final transportation conformity rules (EPA's 40 CFR PART 51). The TIP emissions analysis, using the latest available planning assumptions, traffic forecast models and EPA emission analysis approved models, show that the TIP continues to meet the carbon monoxide emissions reduction test of comparing the emissions between the baseline and action scenario. The TIP is fiscally constrained, and comes from the conforming metropolitan long range transportation plan. Interagency consultation and public participation processes specified in the EPA rule nd in the Transportation Policy Plan were followed in the development of the TIP and the conformity analysis. A detailed description of the conformity analysis is found in Appendix B.

Original and New SIP Measures

The region has implemented all of the adopted transportation control measures in the SIP strategies contained in the original Air Quality Control Plan. A list of the plan amendments, strategies, their status, and how they have changed with new improvements, is in Appendix B.

3. PROJECT SELECTION PROCESS AND CONSISTENCY REQUIREMENTS WITH THE REGIONAL PLAN AND FINANCIAL RESOURCES

ISTEA requirements have changed the project selection process and the content of the TIP. This chapter discusses how projects were selected for inclusion in the TIP, the progress made on major projects, consistency with the regional plan and the balance with financial resources.

The detailed description of projects approved for Title I and III funds are recorded in Appendix A. Also included are descriptions of projects being requested for additional Title III funds. The Title I funded projects are recorded in tables A-1 through A-11 identified by funding sources. Also included are state funded projects. A table of projects with letting dates in 1996 are also included. Technically, these need not be in the TIP since they will have funds obligated but they are included if for some reason a delay occurs. All Title I projects are also recorded in Table A-20 but identified by route number. When a project cannot be identified by route number, a project code has been provided instead.

PROJECT SELECTION PROCESS AND CRITERIA

The region has moved toward a process by which most federal Title I and III funds are selected in a comprehensive and consistent manner. Mn/DOT is committed to a statewide regional project selection process for all Federal Title I funds. A competitive regional process was used to select projects funded with STP Urban Guarantee, CMAQ, Enhancement, bridge improvement/replacement railroad surface and signals, and hazard elimination/safety funds. Projects funded through other Title I categories such as NHS and Interstate Maintenance, were selected through a cooperative process having representatives of the MPO, Mn/DOT and the TAC involved, including local, county and regional government staff. The decisions on investments were made based on jointly agreed upon regional and Mn/DOT priorities. The categories of investment priorities as well as the major facility investments are recorded in the TPP. The specifics of the two processes are discussed below.

COMPETITIVE PROJECT SELECTION PROCESS FOR STP, CMAQ AND ENHANCEMENT FUNDS

A competitive process was developed by the region to select projects to be funded with STP, STP Urban Guarantee, CMAQ and TEP. This process has been used by the region to prioritize projects for use of these funds.

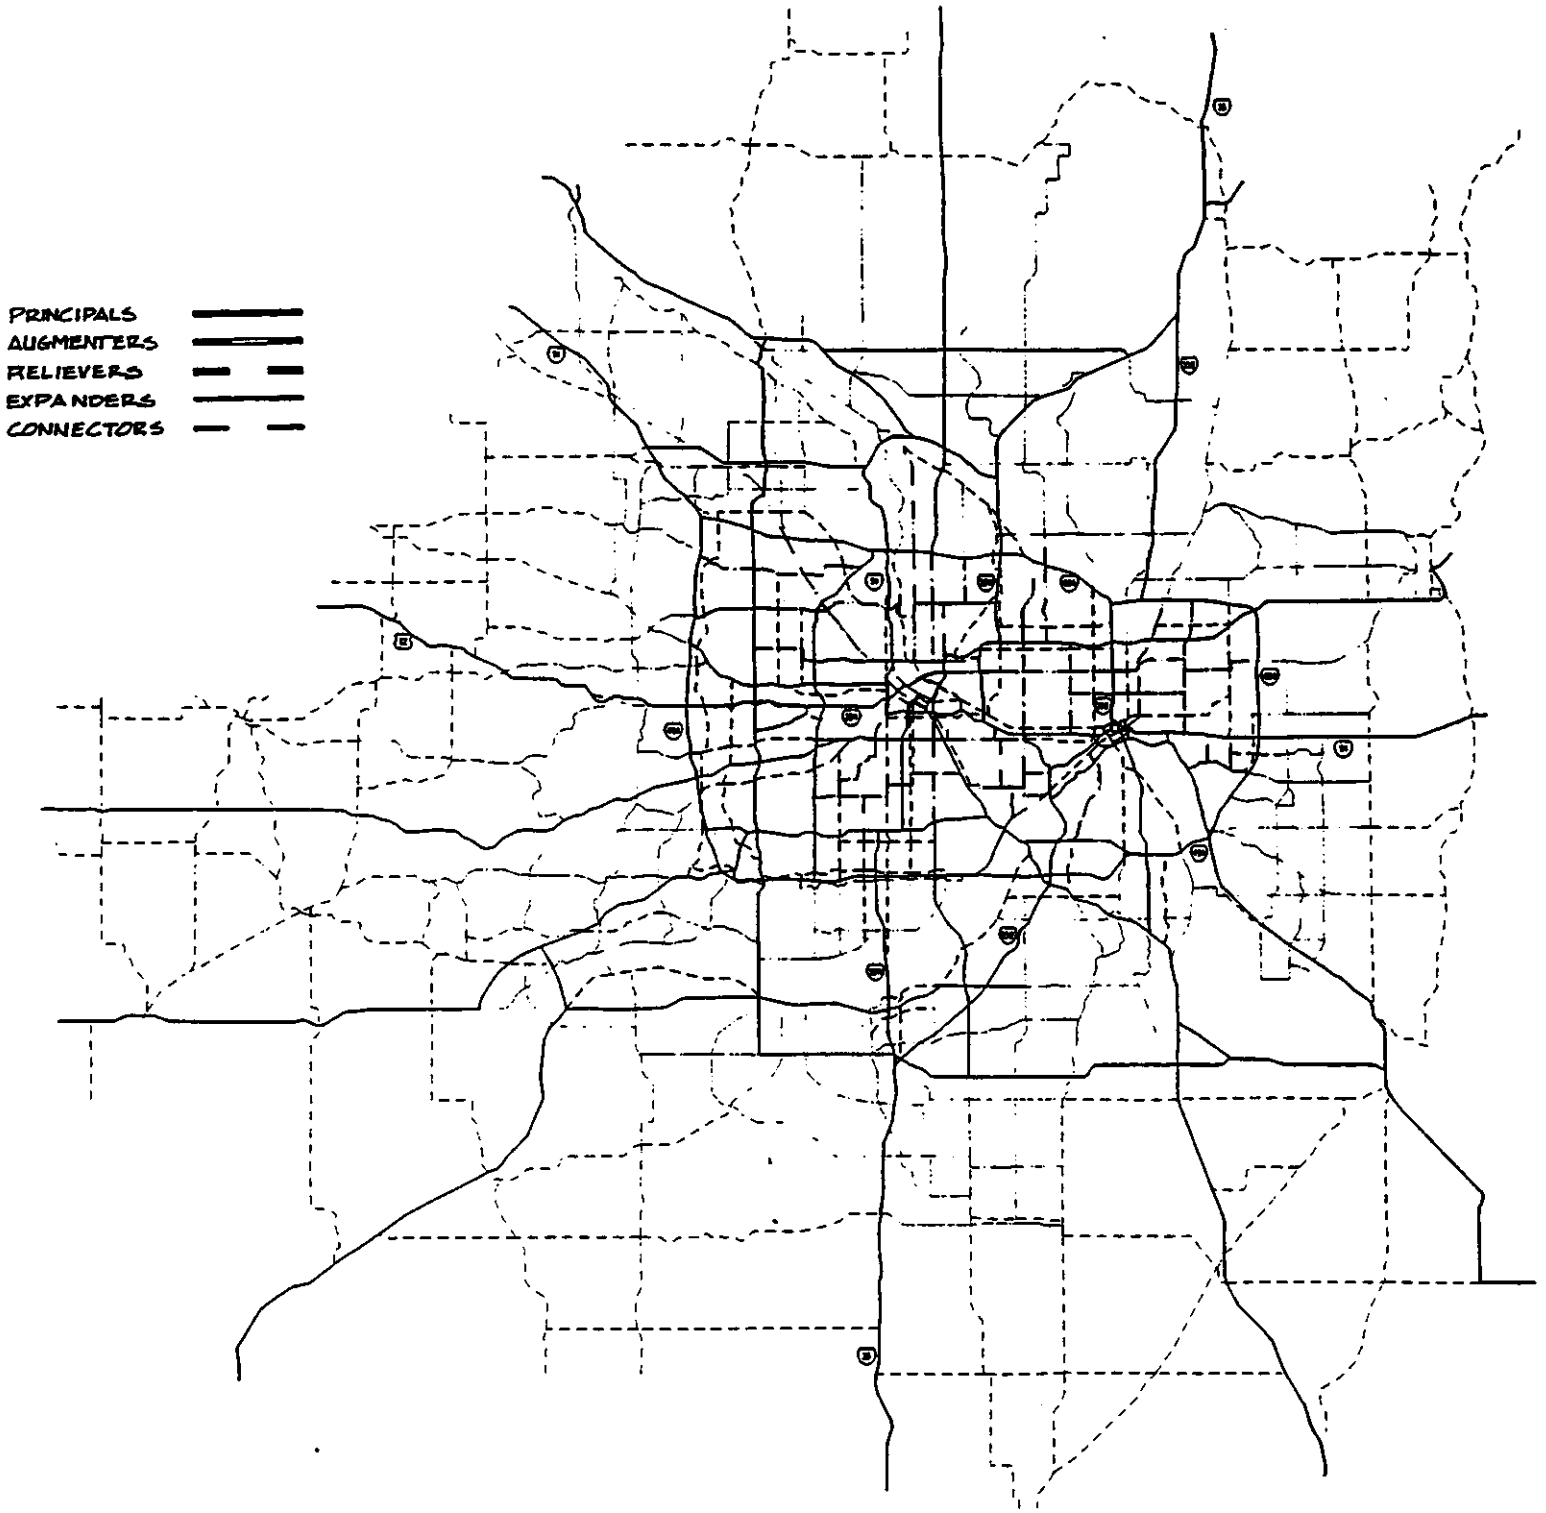
The regional partners designed the process to insure federal Title I funds would help the region implement its plan and high priority projects and programs. Those priorities focus first on safety and preservation of the transportation system, second on management, and third on expansion.

Projects have been solicited in the following categories:

- Principal Arterials
- "A" Minor Arterials (A category of minor arterials with regional importance, see Figure 7.)
  - Relievers
  - Augmenters
  - Expanders
  - Connectors
- Transit
- Bikeway

FIGURE 7

"A" MINORS AND PRINCIPAL ARTERIALS



- Walkway
- CMAQ
- Enhancements
- Bridge Improvement/Replacement
- Hazrd Elimination/Safety
- Railroad Surface and Signals

Separate qualifying and prioritizing criteria were used for each category. A numerical rating was completed for each project in each category.

The ranking of all categories of projects was done by subcommittees of the TAC's Funding and Programming Committee. Using these rankings, the Funding and Programming Committee recommended the projects to be funded to the TAC. There was no predetermined distribution of funds by category or geographic subarea other than the level of funding suggested for enhancements and CMAQ.

The qualifying and prioritizing criteria used were selected to be consistent with and implement regional priorities and plans. Recorded below are the most commonly used qualifying criteria. These are followed by the subject matter of the prioritizing criteria used. The complete solicitation package is available.

Examples of Qualifying Criteria

- The project must be consistent with the policies of the Metropolitan Council's officially adopted Regional Blueprint which includes the TPP.

- The project must implement a solution to a transportation problem discussed within the local or county comprehensive plan and/or in a locally approved Capital Improvement Program (CIP).

- The proposer must include with the submittal a letter from the agency with jurisdiction over the road indicating it is aware of and understands the project being submitted and that it commits to operate and maintain the facility for its design life.

- The proposer must show that the project has been coordinated with all affected communities, MCTO and other levels of government.

Categories of Prioritizing Criteria

- Demonstrated Need for Facility - Present and Future.
- Service Provided.
- Characteristics of Area or Population Served.
- Consistency with Regional Plans.
- Access to Regional Activity Centers
- Reduction of congestion on principal or minor arterials (from CMS)
- Increase in hourly person through put (from CMS)
- Accident Prevention and Control.
- Personal Safety
- Cost Effectiveness
- Air Quality
- Integration of Modes
- Innovation

Recorded in Table 7 is a summary of the project types selected through the competitive process in the region in 1995 and 1996. The selection process covered the letting years 1999 and 2000. The projects had to be placed in either of the two years; first priority was given to the project sponsor wishes and second, by the need to financially balance the TIP.

Mn/DOT solicited projects for Hazrd Elimination/Safety, Railroad Surface and Signals and Bridge Improvement and Replacement. The criteria for project evaluation were reviewed and approved by the Funding and Programming Committee of the TAC. Once the project were evaluated by Mn/DOT staff, the Funding and Programming Committee selected projected to be funded.

PROJECT SELECTION FOR ADDITIONAL TITLE I FUNDS THROUGH CAPITAL IMPROVEMENT COMMITTEE PROCESS

The Capital Improvements Committee (CIC), facilitated by Mn/DOT Metro Division, aids in identifying Mn/DOT projects for inclusion in the MPO's TIP. (See Figure 8 for explanation of CIC process.) The committee deals with state trunk highway projects, provides investment strategies for Mn/DOT programs and prioritizes projects across program categories; it identifies and carries major programming issues to Mn/DOT Metro Division management and to the TAC Funding and Programming Committee.

Participation on the committee includes Mn/DOT Metro Division functional areas, Transportation Advisory Board staff, Metropolitan Council staff and four members of the Technical Advisory Committee.

The Council and Mn/DOT have cooperatively identified priorities to be used to direct the inclusion of major projects into the TIP. In large part, the projects in the 1997-2000 TIP are the same projects (less those implemented) that were found in the 1996-98 TIP.

The partners have agreed to follow the process described below to determine what projects should be in the TIP. Many priorities discussed below have been taken directly from the TPP.

- The first step in the process was to determine if the project in the TIP could be implemented in accordance with the scheduled letting date. If not, the project was either moved to a later year or moved out of the TIP. The projects that have obligated funds are removed from the TIP.

- The second strategy used to identify projects was to follow the three broad regional priorities recorded in the order of importance:

  - Preserve
  - Manage
  - Expand

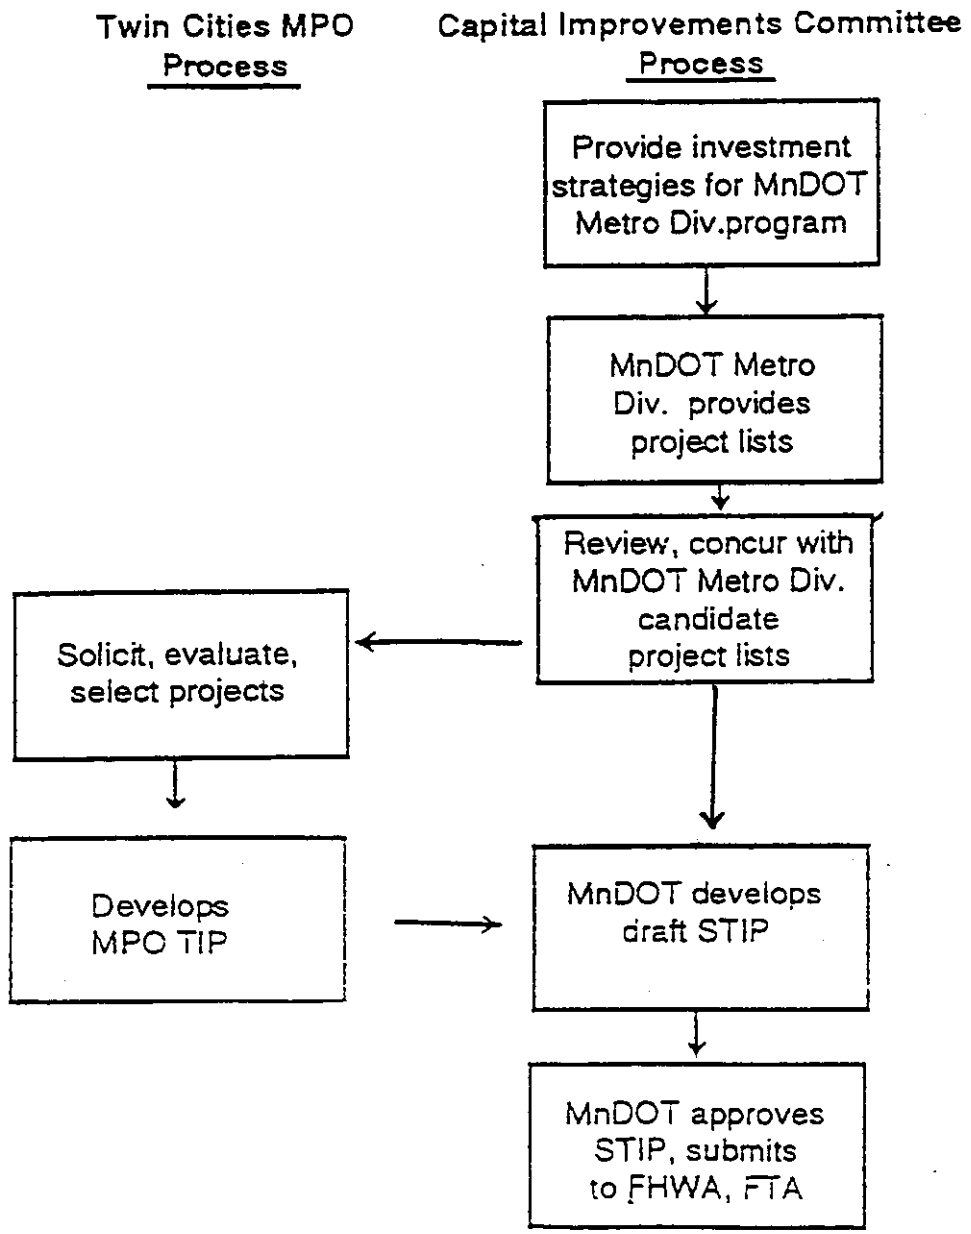
- The "preserve" and "manage" projects were considered highest priority and those "needs" were attempted to be met within the available funds. With the remaining funds, "expansion" projects were selected. The following criteria were used to establish priorities for the expansion projects:

Table 7

SUMMARY OF PROJECTS SELECTED COMPETITIVELY IN FIRST QUARTER, 1996

PROGRAM CATEGORY	PROGRAM YEAR FISCAL 1999	PROGRAM YEAR FISCAL 2000
Hazard Elimination/Safety (HES)		$2,245,600
Railroad Surface & Signals (RRSS)		$2,012,000
Bridge improvement /Replacement (BIR)	$1,352,000	$5,282,500
Enhancements (EN)	$ 440,000	$4; 078,000
Congestion Mitigation Air Quality (CMAQ)	$3,640,800	$3,847,050
Surface Transportation Program (STP)	$24,400,000	$23,360,000
TOTALS	$29,832,800	$40,835,150

Figure 8
CAPITAL IMPROVEMENT COMMITTEE PROCESS



1. Complete projects which are currently under construction. This covered projects such as:

   - TH 101 - Shakopee Bypass
   - TH 10 - North Suburbs

2. Implement Demonstration projects. The region assumed that Demonstration funds were available until year 2000. The projects below were prioritized to allow use of these funds.

   - TH 55
   - TH 212
   - TH 610

3. Fund other expansion projects as money permitted with the intent projects that provided incentives for those willing to share rides would be given a higher priority than projects to accommodated single occupant vehicles or projects that were identified through a specific process undertaken to identify priorities. The four following HOV projects, these interim and one permanent HOV lanes, are needed to take advantage of certain opportunities and to address critical congestion problems and are identified in the TPP as high priority.

I-35W	from Mpls CBD to I-494
I-94	from Mpls CBD north to I-494
I-494	from TH 169 to 34th Av.
I-94	from St. Paul to St. Croix River. (This is a permanent HOV lane that will require conversion of a mixed use lane in part of the corridor.)

Status of Major Projects

Federal TIP guidance requires the progress made on major projects, or lack there of, to be recorded in the TIP. Over the past seven years the region has included a list of major projects in the TIP. Separate tables have been prepared on major highway and transit projects. The highway projects are found in Table 8. For each project a summary has been provided. The current letting year, cost and comments on the status of the project are included.

Most of the projects continue to move toward completion. The CR 18 Bridge and approaches and TH 169 Osseo Bypass were completed in the last year or the last contract let. TH 101 from Elk River to I-94, TH 101 the Shakopee Bypass and TH 55 Hiawatha are under construction. TH 55 has been extended one year to 1999.

The status of the four HOV lanes recommended in the TPP are important to the region. The start of the I-35W HOV from Minneapolis CBD to I-494 has been delayed one year to 1999 and the level of funds reduced for the initial phase from $10 million to $5 million. The remaining $46 million have been tentatively allocated to this project in 2001. This project has been delayed and funds reduced for a number of years.

I-94 HOV lane from CSAH 152 to I-494 was moved out of the TIP in 1994. Mn/DOT is now starting an MIS on this project. $25 million have been tentatively allocated to this project in 2001.

I-494 HOV lane from TH 212 to 34th Av. This project is under study by Mn/DOT as a managed corridor instead of an HOV lane. $20 million are allocated to the project in 2000.

I-94 HOV lane from St. Paul CBD to the St. Croix River. This project is not in the TIP. Funds are tentatively allocated to this project in 2004. The timing puts this project in jeopardy since it is anticipated to covert a mixed use lane to an HOV lane and the longer it is delayed, the higher the level of traffic and the less likely the project can be completed.

The status of major transit projects appears in Table 9. Bus replacement contracts have been regularly let. For the most part, transit projects have been moving toward completion on schedule. Relocation of the Snelling Garage is in the planning stage. The funds for the Nicollet Mall Shuttle have been allocated to future natural gas bus purchases and required maintenance and garaging needs.

Table 8

STATUS OF MAJOR HIGHWAY PROJECTS

Project	Original Cost Estimates	Federal Participation	Program Year	Status/Comments
Highway and Bridge				
1. TH 10, Anoka County (Stage 2/3)	48,000	38,750	96,97,98	All stages will be let by 1998
2. I-35W, Temporary (HOV) Lane and Preservation work from I-35E to Minneapolis	26,000	21,000	96,97,98	HOV south of I-494 complete - HOV north of I-494 $5M in 1999, $46.5 M in 2001, $9M in 2002 (this project has been delayed).
3. TH 36, St. Croix Bridge	78,000	39,000	1996,1997	Const.in 1996 & 1997. $25.5M will be paid by Wisconsin.
4. TH 55, Hiawatha Avenue	12,000	9,600	1996-98	Total project costs have increased to $57.3M, extended to 1999.
5. I-94 Dartmouth Bridge/U of M Interchange	23,500	18,800	--	Under construction.
6. I-94, CSAH 152 to I-494 in Brooklyn Center HOV lane	10,000	8,000	--	Moved out of TIP in 1994. Not now programmed until 2001.
7. TH 100, Reconstruct from Glenwood Av. To CSAH 152	27,350	22,000	1999,2000	EIS will define project, additional funds & time required to complete project.
8. TH 101, Rogers to Elk River	17,000	13,600	1996	Under construction.
9. TH 101, Shakopee Bypass	20,200	16,100	1996,1997	All contracts to be let by 1997.
10. TH 212, Eden Prairie to Cologne - Prelim. Eng. & R/W Aquisition	18,000	14,400	1996-98	Construction to Mitchell Rd., contracts let by 1998. Construction Construction to CSAH 4 let in 1999.
11. I-494, TH 100 to TH 212 HOV lane	20,000	16,000	2000	Project under study, managed corridor demo expected.
12. TH 610, TH 10 to I-94 - first phase	40,000	38,400	1996-98	All contracts let by 1999.
13. TH 3, Lafayette	8,200	6,600	--	Complete
14 TH 55, Mendota Interchange & Bridge	16,400	13,100	--	Complete.
15. TH 169, Osseo Bypass	6,000	4,800	--	Complete
16. CR 18, Bridge & Approaches, Reconstruct S. of I-494	31,500	18,000	--	Complete.

Table 9
STATUS OF MAJOR MCTO CAPITAL PROJECTS

Project	Total $ ($1,000s)	Federal Participation ($1,000s)	Grant Application	Type	Status
1. PROJECTS IN PLANNING STAGE					
• Snelling Garage Replacement	$16,000	$ 6,000	1992	5307	In planning stage
• Purchase 60 Articulated Buses	$25,000	$19,320	1995,1996	5309,5307	Preparing techinical specification
• Transit Hubs					
▸ Highland	$300	$240	1994	STP	In planning stage
▸ Robbinsdale	$210	$160	1994	STP	In planning stage
▸ Uptown	$4,250	$3,200	1994	STP	In planning stage
2. PROJECT DESIGN/ CONSTRUCTION SCHEDULE					
• Co. Rd. 73 Park-Ride Lot	$5,500	$4,400	1999	STP	Design in 1998, construction in 1999
• Foley Park-Ride Expansion	$5,400	$4,000	1999	STP	Design in 1998, construction in 1999
• Eden Prairie Hub	$5,483	$3,528	1995	STP/CMAQ	Design/Engineering complete
3. PROJECTS BEING IMPLEMENTED					
• Electronic Fare Collection	$8,770	$6,617	1992	5307	Being Implemented
• Bus Stop Signs	$2,035	$1,223	1992	STP	Implemented 1996-97
• Perpetual Inventory System	$2,000	$232	1992	5307	Implementation Summer 1996
• 1994 Shelter/Stop Improvements	$1,827	$1,256	1994	STP	Early Implementation
• Speedlite	$651	$128	1994	STP	Implementation 1996-97
• 1996 Tire Leasing	$1,100	$880	1996	5307	Being Implemented
• Travel Demand Management	$1,360	$1,088	1996	CMAQ	Operational
• Fleet Rehab					
▸ Transmission Replacement-60	$320	$256	1996	5307	Being Implemented
▸ Purchase 10 Lifts	$125	$100	1996	5307	Being Implemented
▸ Purchase 100 Gillig Engines	$1,500	$1,200	1996	5307	Implementation beginning April 1996
4. PROJECTS COMPLETED OR BEING COMPLETED					
• SWAMI	$2,641	$1,100	1992	5307	Near Completion
• Purchase 91 Forty-Foot Buses	$20,877	$16,494	1994	5307	71 buses received, remainder in 1996
• Bus Stop Lighting	$565	$200	1992	STP	Completion 1996
• Transit Hubs					
▸ Burnsville	$5,270	$2,950	1996	STP	Operational
▸ Downtown St. Paul	$1,744	$554	1992	STP	Completion 1996
▸ Eden Prairie	$5,483	$3,528	1995	STP/CMAQ	Design/Engineering Complete
▸ Hillcrest	$443	$354	1994	STP	Complete
▸ Northtown	$1,117	$800	1994	STP	Complete in 1996

CONSISTENCY WITH THE REGIONAL TRANSPORTATION PLAN (TPP)

All projects contained in this TIP are consistent with the TPP. It is worth noting a number of the projects and types of projects are specifically prioritized in the TPP. The top priority identified in the TPP was to maintain all 1,200 miles of trunk highways in the region. There is no need to attempt to point out the projects that are consistent with this priority. The majority of projects focus either wholly or in part on the rehabilitation and preservation of trunk highways. (See Table 10) Approximately $270 million of the funds are assigned to preservation projects. There are two categories of preservation distinguishing the more routine activities such as road repair and bridge improvement from the periodic major investment needed such as reconstruction and bridge replacement. This represents 37 percent of total federal and state funds available to the region.

The region's second highest priority for the highway system is to manage the transportation system. Management projects are advanced by Mn/DOT and other agencies. Approximately $90 million or 12% are traffic management. The detailed project descriptions are found in Appendix A. A number of these projects put in place the facilities and equipment needed by Mn/DOT to manage all freeways in the urban area to ensure they are used effectively. These projects include ramp meters and HOV bypasses of meters.

Many of the projects selected for STP and CMAQ are in part management projects. This is due to the criteria used to select the projects (see discussion above). This is especially true of the principal arterial and "A" minor arterial projects. In large part, these categories were developed to promote traffic management activities.

The third priority for funding is the expansion category. All of the major projects identified on Table 8 are consistent with and in many cases, specifically identified in the TPP. The combined federal and state funds allocated to expansion projects represent approximately 44% or $318 million. This includes the $78 million of federal demonstration projects for 1998-2000. These expansion projects are included in the TPP priority list. The level of funds for expansion projects is high due in part to the need to spend the demonstration funds before 2000. The funds require advancing three large expansion projects.

The "A" minor arterial system is intended to provide for a more than local need. The "A" minor arterial system was adopted and is included in the regional transportation plan. The funding of the "A" minor arterial system addresses this need.

The TPP also includes a transit plan. Many projects selected for funding can be found in the transit plan. For example, all transit hubs are included in the region's transit implementation plan (Figure 8). The other projects, while not necessarily found specifically in the TPP, are consistent with adopted policies. This has come about in part due to the criteria used to select the projects.

The TPP emphasizes the need for bike and walk projects. Specific facilities are not identified relative to bike, walk or enhancement projects. There are policies that define needs in these areas. The criteria used to select projects are intended to encourage projects that fulfill these policies.

Table 10
1997-2000 PROJECTS BY WORK TYPE
(in millions)

	97	98	99	2000	TOTAL
Preservation (RX, RD, RS, BI)	$ 19	$ 31	$ 23	$ 43	$116/16%
Preservation (RC, BR)	64	27	42	21	154/21%
Manage (TM, SH, SC, SR, CB, BT, ITS0	32	18	18	22	90/12%
Other (AM, EN, TR, NA)	14	12	14	12	52/7%
Expansion (MC)	65	114	85	54	318/44%
TARGET TOTALS	$194	$202	$182	$152	$730

AM - agreements
BI - bridge improvement
BR - bridge replacement
MC - major construction
RC - reconstruction
RD - reconditioning
RS - resurfacing
RX - road repair
SC - safety-capacity improvements
SH - safety-hazard elimination
SR - railroad safety projects
TM - traffic management
EN - enhancements
IVHS - intelligent vehicle highway system
TR, CB, BT - transit subcategories
ITS - transportation

BALANCE WITH FINANCIAL RESOURCES

ISTEA requires that the region's TIP must be consistent with funding reasonably expected to be available. This means the forecasted revenues must be in balance with the obligations as recorded in the TIP. The Mn/DOT and the Metropolitan Council have agreed to use the figures that are discussed in this section of the TIP. The project costs closely match the funds available for all four years of the TIP.

Mn/DOT has developed and follows a process of fund allocation to the regions in the state that insures the regional project commitments and the STIP are in balance with the funds available. Mn/DOT sets funding targets for each of the regions to use as they developed their draft TIPs. The draft TIPs submitted to Mn/DOT can be over programmed by the regions as a means to request additional federal and state funds. Mn/DOT sets the final funding levels which are in balance for the state. The region has received $28 million in additional funding for 1997 and 1998 to date.

This TIP records the region's request for an additional $23 million over the four year period; $5 million in 1997, $7 million in 1998, $6 million in 1999 and $5 million in 2000. If these funds are not allocated to the region, projects will be removed to balance the TIP.

The total Federal Title I and state highway funds allocated to the region are recorded in Table 11. The initial regional funding target provided by Mn/DOT for Title I funds for 1997-2000 is $328 million annually. State funds allocated to the region were $82 million annually for a total of $328 million. This figure was reduced by approximately $27 million annually to provide for right-of-way costs, cost overruns and supplemental agreements. Therefore, the region could expect to receive an average $154 million annually of Title I and state funds.

In accordance with federal guidance, no overage of Title III federal funds are assumed for 1997. For 1998 - 2000, the federal grants are in line with the latest direction provided by FTA. The requests for additional funding have been separated from the approved funds.

In the case of Title III, Federal Transit Act, Section 5309, it is assumed $38,000,000 of federal funds will be available for capital projects in 1997 and 1998 (Table A-12). The region will receive approximately $13,000,000 per year from Section 5307 Formula Capital Assistance funds (Table A-13). Additional federal funds are being made available from Title I, CMAQ and STP programs for transit. Over the four year TIP, approximately $29,000,000 of federal funds will be made available to transit projects. (These estimates may need to be changed when additional data is made available.)

The region assumes it will receive $3.7 million in operating assistance for MCTO in 1996, $1.85 million in 1997 and no federal operating assistance thereafter. This represents approximately 5 percent of the annual operating costs of MCTO in 1996 and 2 percent in 1997.

Figure 9

Proposed Short-Term Improvements: Transit Hubs/Intermodal Facilities

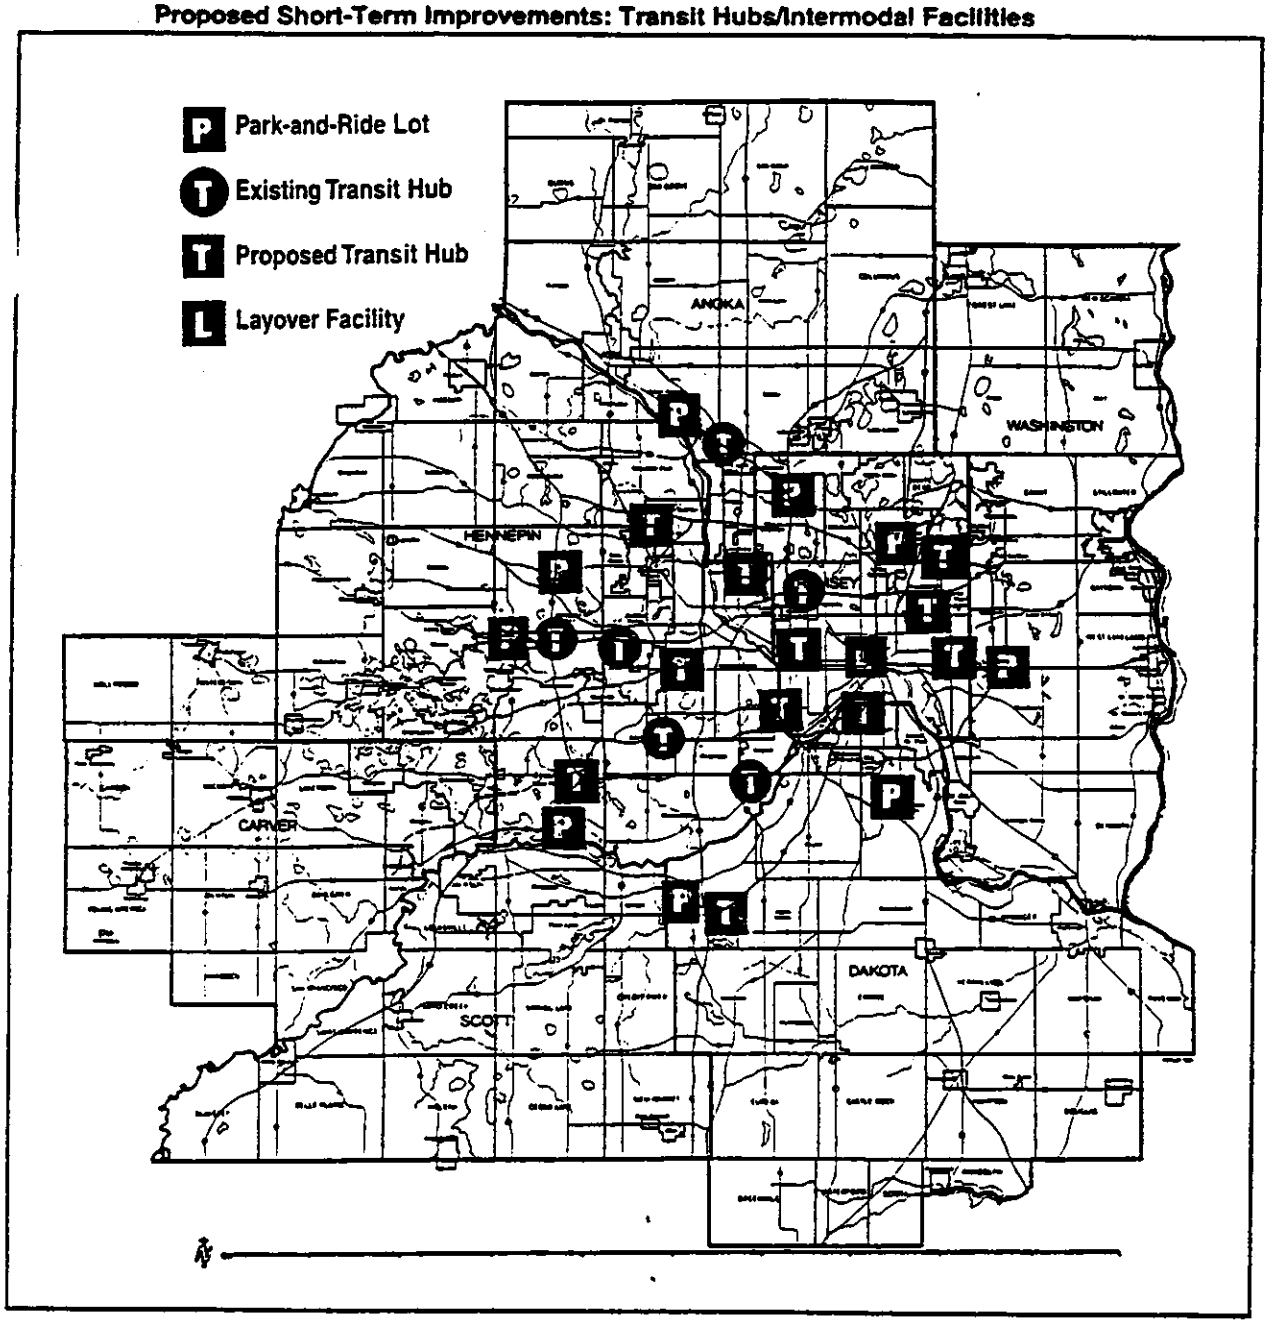


Table 11
TITLE 1 AND STATE HIGHWAY FUNDS ALLOCATED 1997-2000
(millions)

	1997	1998	1999	2000	Total
Federal Title I Funds	$ 99	$ 99	$ 99	$ 99	$396
State Funds	82	82	82	82	328

FEDERAL TRANSIT FUNDING SUMMARY

Title III, 5307 Capital assistance available to region 1997-2000	$68,000,000
Title III, 5309 Approved projects - 1997, 1998	$7,800,000
Title I, Approved Projects - 1997-2000	$28,572,000

APPENDIX A
DETAILED PROJECT DESCRIPTION

Title I, Title III and
State Funded Projects

Title I Funded Projects

Title III Funded Projects

Title I Projects Identified by Route Number of Project Code

KEY TO TABLES A-1 THROUGH A-11 AND A-20

The tables are broken into the various "most likely" funding categories and are sorted by: Local/Mn/DOT, Agency, Trunk Highway, State Project Number. The description of each column is shown below.

Year	The Federal Fiscal year the project is scheduled to be let.
PRT	The major project this project is a part of - see attached list.
Route	The highway the project is located on. A "999" means multiple routes or a location has yet to be determined.
Project Number	The Mn/DOT project number.
Description	The location and work to be accomplished by the project.
Agency	The Agency with jurisdiction over the project.
Category	The project type: Preservation, Replacement, Management, Expansion, Transit, Trails or Other.
PRG	Mn/DOT Program categories

AM Agreements	SR Safety Rail
BI Bridge Improvement	BT Bike Trails, Trails
BR Bridge Replacement	MC Major Construction
RC Reconstruction	RD Reconditioning
RS Resurfacing	RX Road Repair
SC Safety-Capacity	SH Safety Hazard Elimination
TM Traffic Management	TR Transit

AQ	TIP air quality category. See Appendix C for description of codes.
Total $	Total estimated cost of project.
Fed $	Federal funding for the project. In some instances the federal funding is greater than the funding allocated by the STP selection process. This was necessary to completely fund the larger projects.
DEMO $	Total federal demonstration funding for the project.
State $	Mn/DOT state funding for the project.
Local $	Total contribution from the local agency involved in the project.

Revised 3/95

MN/DOT Metro Division Construction Projects
1997-2000 PARENT Projects

Parent Number	Highway	Location	Description	Expansion	Lanes Before	Lanes After
1	TH 10	New TH 10 in Anoka County	Construct Freeway	Yes	NA	4
2	I-35W	Junction I-35E to Minneapolis	Preservation + Temporary HOV Lanes	Yes	Varies	Varies
3	TH 36/TH 5	St. Croix River Crossing	Construct New River Crossing	Yes	NA	4
4	TH 55	Hiawatha Avenue	Reconstruct Road	Yes	4	4
5	TH 100	I-394 to Indiana Avenue	Upgrade Per EIS Recommendation		To Be Determined	
6	TH 101	Rogers to Elk River	Upgrade to 4-Lane Expressway	Yes	2	4
7	TH 101	Shakopee Bypass	Construct Freeway	Yes	NA	4
8	TH 212	I-494 to Cologne	Construct Freeway	Yes	NA	4
9	TH 610	TH 10 to TH 169	Construct Freeway	Yes	NA	4

These are significant projects that will be constructed over a number of years and divided into numerous small projects. The Parent number is provided in a separate column on the tables in Appendix A to help the reader identify these projects.

METROPOLITAN COUNCIL

Mears Park Centre, 230 E. Fifth St., St. Paul, MN 55101

APPENDIX B

CONFORMITY DOCUMENTATION

OF THE 1997-2000 TRANSPORTATION IMPROVEMENT PROGRAM TO THE 1990 CLEAN AIR ACT AMENDMENT

The Environmental Protection Agency's (EPA's) 40 CFR PART51 Criteria and Procedures for Determining Conformity to State or Federal Implementation Plans of Transportation Plans, Programs, and Projects Funded or Approved Under Title 23 U.S.C. or the Federal Transit Act (Conformity Rule), requires the Metropolitan Council to prepare a conformity analysis of the region's Transportation Plans and Transportation Improvement Program. Based on the air quality analysis, the Council must determine the conformity of the transportation plan to meet the 1990 Clean Air Act Amendments (CAAA) schedule to attain carbon monoxide (CO) standards. This appendix describes the procedures used to perform the analysis, and lists the findings and conclusions to support the Metropolitan Council's (Council's) determination that the 1997-2000 Transportation Improvement Program (TIP) conforms to the requirements of the CAAA.

TABLE OF CONTENTS

Page

I. CONFORMITY OF THE TRANSPORTATION IMPROVEMENT PROGRAM

Pursuant to Section 51.410 of the Conformity Rule, the Council reviewed the TIP document and certifies that it conforms to the recent estimates of mobile source emissions based on the most current transportation models population, employment, travel and congestion forecasts:

A. The Council is required by Minnesota statute to prepare regional population and employment forecasts for the Seven County Twin Cities Metropolitan Area. The air quality analysis of CO emissions for

Wright County is prepared under the guidance of the Council as part of an intergovernmental agreement with the county, MN/DOT and the Council.

B. The published source of socioeconomic data is in the Metropolitan Council's *Regional Blueprint*. This is the planning document adopted in 1994, that provides the Council with a framework to develop long range forecasts of regional highway and transit facilities needs.

C. The Minnesota Pollution Control Agency (MPCA) reviewed the TIP document for acceptability to meet the federal conformity requirements and was consulted during the preparation of the TIP and the conformity review documentation.

D. The Minnesota Department of Transportation (Mn/DOT) was routinely consulted during the preparation of the TIP and the conformity review documentation.

E. A quantitative analysis of the emissions impact was prepared using the TIP projects listed in Tables 2 through 4. The analysis was conducted using the MOBILE5A and EMIS mobile source emissions models. The analysis estimates annual reduction of 475 tons/year of CO in the analysis year of 2000 and 1,142 tons/year in the analysis year 2005, if the "action scenario" is implemented.

F. The CO reductions are estimated to be sustained for a reasonable period beyond the analysis year 2000. The emission reductions shown in Table 1 includes an estimate of emissions from Wright County projects to be constructed that are added to the Twin Cities CO nonattainment area emission totals. No regionally significant projects are planned or programmed for the City of New Prague, which is also in the nonattainment area, but is outside the Council jurisdiction.

G. Exempt projects not included in the regional air quality analysis were identified and classified in accordance with the EPA guidance in Section 51.460 of the Conformity Rule.

H. The quantitative analysis includes all known regionally significant projects as defined in Section 51.392 of the Conformity Rule.

I. The TIP addresses the requirements of the ISTEA metropolitan planning rule Section 450.322, the Conformity Rule, and is fiscally constrained. Section 3 of the TIP document demonstrates the consistency of proposed transportation investments with already available and projected sources of revenue.

J. The public involvement process implemented complies with the ISTEA Metropolitan Planning Rule, Section 450.316 and Section 51.402(e) of the Conformity Rule. (See pages 5, B-12 and B-13.)

K. The Council reviewed the TIP and certifies that the TIP does not conflict with the implementation of the SIP, and conforms to the requirement to expedite implementation of Transportation System Management Strategies which are the adopted Transportation Control Measures for the region.

L. The TIP is from a conforming long range transportation plan.

II. TIP CONTRIBUTION TO EMISSION REDUCTIONS IN THE TWIN CITIES CARBON MONOXIDE NONATTAINMENT AREA

The results of the emission reduction calculations for the TIP are shown in Table 1. A description of the methods and models used to prepare these calculations is in Section III of this Appendix.

Table 1
TIP SCENARIOS ANNUAL CARBON MONOXIDE (CO) EMISSIONS FOR ANALYSIS YEARS, 1990, 2000, AND 2005 (TONS\YEAR)

NETWORK	1990	2000	2005
BASELINE TIP SCENARIO	553,968	324,778	307,502
ACTION TIP SCENARIO	--	324,303	306,359
TIP CO REDUCTIONS	--	475	1,143

III. DESCRIPTION OF EMISSION ESTIMATION MODEL AND ANALYSIS METHODOLOGY, ASSUMPTIONS

A. TRANSPORTATION IMPROVEMENT PROGRAM ANALYSIS

Pursuant to Sections 51.412 and 51.414 of the Conformity Rule, the Council has reviewed the TIP document. Based on this review, the Council finds that the TIP contributes to annual emissions reductions consistent with section 51.436 for program years 1997-2000. The following is the description of the scenarios used in the emissions analysis as required by the Conformity Rule.

The Baseline TIP Scenario, as described in Section 51.436(b), is the future transportation system that would result from current programs, composed of all in-place regionally significant highway and transit facilities, services and activities, all ongoing Transportation Demand Management (TDM) or TSM activities, and completion of all regionally significant projects regardless of funding source, which are currently under construction or are undergoing right-of-way acquisition, that come from the first three years of a previously conforming TIP or have completed the NEPA process.

The Action TIP Scenario as described in Section 51.436(d), is the future transportation system that would result from the implementation of the TIP and other regionally significant projects in the time frame of the transportation plan. It includes all facilities, services and activities in the "baseline" scenario, completion of all TCMs and regionally significant projects included in the TIP, and all TDM and TSM activities known to the Council, but not included in the TIP. The regionally significant highway projects for Twin Cities Seven-County Metropolitan Area, included in the Action TIP Scenario, are listed in Tables 2 through 4.

The Council has estimated that the "Action TIP Scenario" contributes to emissions reductions by 475 tons/year more than the "baseline" scenario for the 2000 analysis year. The Council believes that CO

reductions shown for the remaining analysis years are likely to continue to occur for the following reasons:

1. Continued improvement in auto emissions controls systems and the implementation of an oxygenated gasoline program as required by the CAAA.

2. A regional commitment to continue capital investments to maintain and improve the operational efficiencies of the highway and transit systems.

3. A regional commitment to seek alternative methods to reduce congestion and the rate of growth of vehicle miles traveled such as the use of congestion pricing promoting higher density and mixed use development and other techniques.

4. The continued involvement of local governmental units in the regional 3C transportation planning process to address local congestion and land use density problems.

All the TIP highway projects that would add single occupancy vehicle capacity were reviewed as to whether significant single occupancy vehicle capacity would be added if the project was constructed, or whether the project had completed a NEPA process.

A nonattainment area for PM-10 is located in the City of St. Paul. The nonattainment designation is not due to transportation sources. The EPA has approved of MPCA's plan to bring this area in attainment. However, because of continued monitored violations in this area, MPCA is working with EPA to address this problem. The violations were not caused by transportation sources.

B. TRANSPORTATION IMPROVEMENT PROGRAM HIGHWAY PROJECTS

Exempt Projects

Pursuant to the Conformity Rule, the projects in the TIP were reviewed and categorized using the following determinations to identify projects that are exempt from a regional air quality analysis, or are regionally significant projects and must be included in the analysis. The classification process used to identify exempt and regionally significant projects was developed through a consultation process involving the MPCA, the Council and Mn/DOT. The exempt air quality classification codes used are in Appendix C. Projects which are classified as exempt must meet the following requirements:

1. The project does not interfere with the implmentation of transportation control measures (TCMs).

2. The project is segmented for purposes of funding or construction and received all required environmental approvals from the lead agency under the National Environmental Protection Act (NEPA), including:

   a. A determination of categorical exclusion: or

   b. A finding of no significant impact: or

   c. A final Environmental Impact Statement for which a record of decision has been issued.

3. The project is exempt as defined in Section 51.460 in the Conformity Rule. Projects identified as exempt by their nature do not affect the outcome of the regional emissions analyses and add no substance to the analyses. These projects are determined to be within the four major categories described in the conformity rule.

   a. Safety projects that eliminated hazards or improved traffic flows.

   b. Mass transit projects that maintained or improved the efficiency of transit operations.

   c. Air quality related projects that provided opportunities to use alternative modes of transportation such as ride-sharing, van-pooling, bicycling, and pedestrian facilities.

   d. Other projects such as environmental reviews, engineering, land acquisition and highway beautification.

C. REGIONALLY SIGNIFICANT PROJECTS

Regionally significant projects, as defined in Section 51.392 of the Conformity Rules, were identified and assigned to the appropriate scenario and analysis year for the TIP air quality analysis.

Table 2 lists the TIP projects included in the air quality analysis as part of the "Baseline Scenario." These are projects scheduled to be completed by the 2000 analysis year. The TIP action scenario projects are listed in Tables 2 and 4.

D. WRIGHT COUNTY AND THE CITY OF NEW PRAGUE PROJECTS

A significant portion of Wright County and the City of New Prague are included in the Twin Cities CO nonattainment area as identified in the November 6, 1991, *Federal Register*. However, since the county or the city are not part of the Seven County Metropolitan Area, Wright County and New Prague projects are not considered in the selection of projects for federal funding through the Transportation Advisory Board (TAB) and Council processes. However, Wright County and New Prague projects are evaluated for air quality analysis purposes, and the emissions associated with the regionally significant county projects identified are added to the Seven-County region's emissions total.

No regionally significant projects are planned or programmed for the City of New Prague. The Wright County project analyzed for CO emissions is the T.H. 101 from the Hennepin/Wright County line to the Sherburne/Wright County line. The project is to construct a 4-lane arterial facility with the addition of signalized intersections. The emissions calculated were added to the Twin Cities Seven-County baseline totals as shown in Table 1. A project to reconstruct segments of a 4-lane arterial facility, TH 55 in the vicinity of the city of Buffalo emmissions were added to the year 2000 action totals in Table 1.

The Wright County CO emissions were calculated using the following method:

1. Vehicle Miles Traveled (VMT) for each of the analysis years was calculated by the following six functional classifications: rural interstate, rural principal arterial, rural minor arterial, rural major collector, rural minor collector, rural local, urban principal arterial, urban minor arterial, urban collector, urban local. VMT data were complied using a Mn/DOT-maintained annual traffic count

data base and the most recent (1994) Wright County Transportation Plan.

2. Total vehicle speeds were calculated by using the volume-to-capacity ratios based on SAPOLLUT tables (see Exhibit 1).

3. The emission factors based on MOBILE5A input values were multiplied by VMT derived CO emissions for each of the functional classifications.

   The Wright County CO emission values were than derived by adding the total emissions from all the functional classifications. For each of analysis years baseline and action scenarios.

E. AIR QUALITY CONFORMITY DETERMINATIONS FOR TRANSIT PROJECTS

The transit projects listed in Appendix A support ongoing regional and local operations and maintenance of transit systems, and do not require National Environmental Protection Act (NEPA) reviews. Exempt projects fall within the "Mass Transit" category listed in the Conformity Rule. The type of exemption is indicated from the codes listed in Appendix C. The U.S. EPA does not provide guidance on the preparation of an air quality analysis for park-and-ride facilities. If an analysis is required, a hotspot analysis of intersections potentially affected by the facility, will be prepared by the project applicant.

Table 2
REGIONALLY SIGNIFICANT TIP PROJECTS
INCLUDED IN THE AIR QUALITY ANALYSIS
IN THE YEAR 2000 BASELINE SCENARIO

Route	Project #	Year	Description	Agency
TH-10	0214-	97	Major Construction-Stage 2A; Foley Blvd. Interchange	MnDOT
TH 101	7005-57, etc.	97	Shakopee Bypass	MnDOT
TH 101	2738-10	97	Rogers to Elk River	MnDOT
TH 212	2762-27148	98	Prairie Ctr. Dr. over TH 212	MnDOT
TH 212	2762-12	98	.05 Mile East Mitchell Dr. to TH 494	MnDOT
TH 55	2724-105	97	Hiawatha Ave. - I-94 to E. 29th St.	MnDOT
TH 610	2771-12	97	Regent Ave. to .25 Mile East of France Ave.	MnDOT
TH 610	2771-11	98	.25 Mile East to West End of Bridge Over Mississippi River	MnDOT
TH 610	2771-15	98	TH 169 to Hampshire Ave.	MnDOT
TH 610	2771-14	99	Hampshire Ave. to Regent Ave.	MnDOT
TH 55	_	2000	From I-94 Southeast to I-494 Build 4-Lane Expressway	MnDOT
CSAH 4	27-604-12	96	Reconstruct from CSAH 1 to Terrey Pine Dr.	Henn. Co.

Table 2
REGIONALLY SIGNIFICANT TIP PROJECTS INCLUDED IN THE AIR QUALITY ANALYSIS IN THE YEAR 2000 BASELINE SCENARIO

Route	Project #	Year	Description	Agency
CSAH 16	AE-7	96	Reconstruct; Interlachen Dr. to CSAH 19	Wash. Co.
TH 36	8204-37	97	From 0.6 mile west to 0.4 mile east of TH 5, reconstruct, relocate frontage road	MnDOT
TH 55	2724-102	99	Hiawatha Ave. from 6 mile south of E. 59th St. to E. 46th St.	Mn/DOT
TH 212	2762-27138	2000	CSAH 4 Over TH 212	MnDOT
TH 212	2762-12	2000	CSAH 4 to .25 Mile West of Wallace Rd.	MnDOT
TH 55	-	2000	Construct 4-Lane Expressway from 1.2 Miles Northwest to 2.6 Miles Southeast of Th 25	MnDOT
TH 36		2000	Stillwater/Holton River Crossing over the St. Croix	Washington
CSAH 1		2000	Reconstruct; TH 169 to W. Of CSAH 18	Hennepin
TH 7		2000	From TH 101 to the western boundary of Chanhassen, select capacity and safety improvements based on corridor study in plan's App. 2	Hennepin
80th St.		2000	79th/80th St. - Reconstruct from TH 100 to TH 77 (Cedar Ave.)	Hennepin
TH 169		98	From I-494 to TH 101, build bridge and 4-lane express according to EIS	Hennepin
TH 152	27-757-07	97	Reconstruct from 64th Ave. to 71st Ave. N.	Hennepin
TH 10	-	97	From TH 169 Southeast to TH 610	MnDOT

Table 3

YEAR 2000 ACTION SCENARIO PROJECTS

Route	Description	County
I-494	From junction with I-94 south to I-394, meter bypass ramps	Hennepin
CSAH 61	From CSAH 10 to I-94, reconstruct and widen	Hennepin
CSAH 130	From Hemlock Lane to TH 169, reconstruct and widen	Hennepin
CSAH 23	From CSAH 9 to CSAH 70, reconstruct and widen	Dakota
CSAH 78	From Coon Rapids Blvd. To Robinson Dr., reconstruct and widen Hansen Blvd.	Anoka
CR 46	From CSAH 31 to TH 52, reconstruct and widen CR 46 (160th St.)	Dakota
TH 55	From Arrowhead Dr. to Hunter Dr., construct 4-lane Roadway	Hennepin

Table 4

YEAR 2005 ACTION YEAR SCENARIO PROJECTS

Route	Description	County
I-494	From I-394 south to TH 169, bypass ramps	Hennepin
TH 77	From TH 13 to I-35E, meter, bypass ramps	Dakota
TH 280	From I-35W south to I-94, spot improvements	Ramsey
TH 169	From I-94 south to I-494, meter, bypass ramps	Hennepin
I-35W	From I-94 common section south to TH 52 to I-494 - add HOV lane	Hennepin
I-35W	From I-694 south to I-94 common section, meter, bypass ramps	Hennepin
I-94	I-494 to CSAH 152	Hennepin
I-94	From I-494 to Minneapolis CBD, complete meter bypass ramps, add HOV lanes	Hennepin

F. 1990 HIGHWAY NETWORK AND TRAFFIC ASSIGNMENT DOCUMENTATION

Traffic assignment zones (TAZ's) are used in the traffic modeling process as the common geographic unit for data summary. The system of TAZ's covers the entire seven-county, Twin Cities Metropolitan Area. All home-interview data and selected other trip and socioeconomic data were compiled by TAZ. In additions, the TAZ system forms the geographic framework for coding highway and transit networks. Each TAZ is linked to all others by the highway network. Most are linked to one another by the transit network.

The most significant application of the TAZ is as the geographic unit used by the models to predict attractions and productions of person-trips. An example of a TAZ is a shopping mall. A mall has a homogeneous commercial land use that attracts people to work or shop. Another type of TAZ, produces person-trips generated in proportion to the number of households, type of household ,size of household, and an income variable such as the number of automobiles that each household has available on a daily basis for trip-making.

The 1990 zone system consists of 1,165 internal zones and 35 external stations. Internal zone boundaries most often lie along major highways or arterials streets or on any other significant physical boundary that shapes and directs trip movements, such as a large lake or major river. County boundaries also form edges of zones where appropriate. An external station is a point at the edge of the seven-county area where vehicle trips leave or enter the metro system without being associated with the local land use. In other words, one end of the trip is outside the seven-county area.

The rebuilding of the 1990 highway network was completed by Mn/DOT with assistance from the Council, and the transportation departments of counties and cities. The rebuilt network is based on data from the 1990 regional Travel Behavior Inventory (TBI).

To reflect some key parameters for transportation modeling, such as typical speeds by location in the region, the network links are relate to geographical area types of Rural, Developing, Developed, Center City (described as Minneapolis and St. Paul), Central Business District (CBD) which are the Minneapolis and St. Paul CBD's and outlying Business Area.

Rural is defined as areas with population density less than one-person-per-acre. The Developing area defined as an area with population greater than one-person-per-acre and outside the Interstate 694/Interstate 494 (I-694/I-494) ring. Inside the I-694/I-494 ring is the Developed area the CBD and Center City. The Outlying Business Areas are freestanding areas some distance from Minneapolis and St. Paul which operate like a CBD.

Area types are used to create a matrix by facility types. Facility types are categories of roads which operate in a similar manner. These facility types are:

1. Metered Freeway
2. Unmetered Freeway
3. Metered Ramp
4. Unmetered Ramp
5. Divided Arterial
6. Undivided Arterial
7. Collector
8. HOV
9. Centroid Connector
10. HOV Ramp

The Geogrpahic Information System (GIS) software used in the modeling, creates default speed based on 1990 Travel Behavior Inventory (TBI) highway speed survey data and capacity values for all the network

links. In this process, areatype polygons are created that automatically identify all the links inside of the polygon. The area type value is automatically assigned to the link. The relational database software, ORACLE, is used to assign or update speed and capacity of links based on their area type/facility type. Figure 1 illustrates the flow of the trip demand models used in the trip distribution model.

The Trip Generation Model

The Trip Generation Model produces productions and attractions for each transportation analysis zone based on the population, number of households, employment level and socio-economic characteristics of each zone. The model was calibrated through the use of the 1990 Travel Behavior Inventory Home Interview Survey, Establishment Survey, and Special Generator Surveys which provided several databases of observed daily trips.

Trip Distribution Model

The trip distribution model uses the trip ends from the trip generation model, and information on the time and travel cost of traveling to estimate the zone to zone movements for the region. The distribution model for the Twin Cities area is a standard gravity model.

The model generates the number of person trips that are anticipated to be made between any two zones in the regional model on an average weekday, regardless of mode. The model was calibrated through the use of the 1990 Travel Behavior Inventory Home Interview Survey which provided a database of observed daily trips.

Mode Choice Model

The Mode Choice Model applies a logit model to home-based work, home-base other and non-home based trips. In addition, non-home based trips are further divided into work-related and non-work related. Home-based university trips are dealt with separately, using the work model. The mode choice models use the travel times and costs of the highway and transit systems to estimate the proportion of trips which will use the transit system, be automobile drivers, or be automobile passengers. Two surveys provided data for calibrating the mode choice model, the 1990 Travel Behavior Inventory Home Interview Survey and the 1990 transit onboard survey.

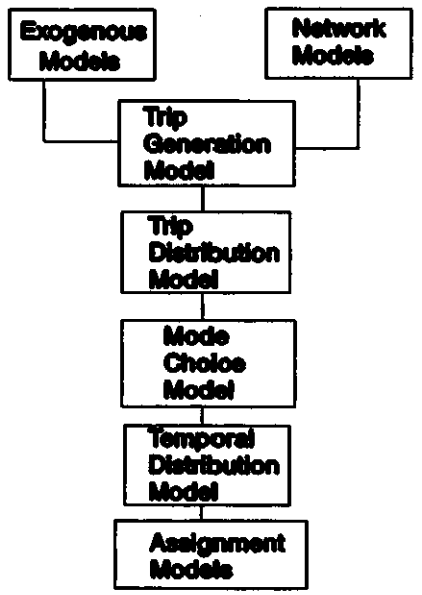
Temporal Distribution Model

The Temporal Distribution Model splits the daily trip tables into time segments to replicate the peak hours, peak period and off-peak travel periods.

Assignment Model

The Assignment model distributes vehicle trips onto the highway system through a capacity restrained equilibrium method. Capacity on the highway system, in proportion to the volume of travel assigned to each link in an iteration, result in a decrease in speed on the link. The relationship between volume and capacity was adjusted for certain facility types based on 1990 Travel Behavior Inventory Highway Speed Survey data, rather than solely using the default Bureau of Public Roads ratios.

FIGURE 1
GENERAL FLOW DESCRIPTION OF THE TRIP GENERATION MODELS



G. AIR QUALITY MODELING

A regional air quality analysis was prepared using the MOBILE5A and EMIS air quality analysis models. The MOBILE5A model is used to produce carbon monoxide emission factors from mobile sources for the region. A sample input file for MOBILE5A is in Exhibit 2, along with the output emission factors. EMIS is used to calculate the daily mobile source air pollution. The calculation is based on emission factors from MOBILE5A (in grams per vehicle mile), vehicle miles of travel (VMT), and congested speed from a highway assignment. Travel on centroid connectors, and intrazonal travel also are accounted for by the model. EMIS summarizes daily pollutant emissions from calculations performed on the model, on a link-by-link basis. Major steps within EMIS are as follows:

- Read the capacity-restrained link loadings, speeds, area types, facility types, and number of lanes.
- Read the intrazonal vehicle trips, and allocate them to centroid connectors in proportion to interzonal trip loading on the centroid connectors.
- For each link, pick the CO emission rate from the MOBILE 5A run. Rates are picked on the basis of area type, facility type, and capacity restrained speed. Linear interpolation is used to calculate emission rates that fall between the speed increments developed by MOBILE 5A
- Multiply the link distance by the loading to obtain VMT for the link.
- Accumulate VMT, VHT and emissions by geographic area, facility type, area type and number of lanes.

Outside of EMIS, the emissions for each time period of the regional forecast are aggregated to a daily total and converted to tons per year.

The series of models currently used are not capable of analyzing individual transportation demand management strategies. This type of analysis must be performed "off-model" by applying CO reduction estimate techniques developed to analyze the benefits of CMAQ types of projects.

IV. CONSULTATION

A. PUBLIC INVOLVEMENT PROCESS

A proactive public involvement process was used in the development and adoption of the TIP as required by the Council's *Citizen Participation Plan.* The plan and administrative procedures contains goals, strategies and procedures for public communication and involvement, public notices of meetings held by the Council and the conduct of hearings to formally solicit comments on the plan document. These documents were adopted after extensive public involvement in the preparation and review. A public hearing is to be held by the Council on the TIP with a 45-day public comment period provided. During the comment period, copies of the plan were available at over 20 public libraries throughout the metropolitan area. The record of these comments and TAB and Council's responses prior to adoption is part of the conformity documentation. The public involvement process to be implemented complies with the ISTEA Metropolitan Planning Rules, Section 450.316 and Section 51.402(e) of the Conformity Rule.

B. INTERAGENCY CONSULTATION PROCESS

An interagency consultation process was used to develop and the TIP. Consultation will be continued through the public comment period to respond to comments and concerns raised by the agencies prior to final adoption by the Council. The process followed will comply with Section 51.416 of the Conformity Rule and Section 450.31 of the ISTEA Metropolitan Planning Rules.

The Council, MPCA and Mn/DOT conferred on the application of the latest air quality emission models, the review and selection of projects exempted from a conformity air quality analysis, and regionally significant projects that must be included in the conformity analysis of the TIP. The following is a list of interagency meetings held and scheduled to consult during the preparation and adoption of the TIP document.

DATE	ACTIVITY
Oct-Nov 1994	Series of meetings with a transportation/air quality task force by the Council, MPCA, Mn/DOT and other metropolitan planning organizations to develop consultation procedures as part of a SIP amendment required by the Conformity Rule. A public comment period was conducted by the MPCA. The Council and Mn/DOT submitted formal comments, as did the other MPO's in the state.
11/10/95	The consultation procedures in the final draft of the proposed SIP amendment are used for the regional solicitation of 1997-2000 TIP projects. The proposed consultation procedures will be applied to the solicitation process until adoption by the MPCA.

3/13/96	Council, MPCA, Mn/DOT staff meeting to identify and classify exempt projects, and to concur on the regionally significant projects to be in the Conformity Air Quality Analysis.
4/17/96	Transportation Advisory Board (TAB) selects projects for inclusion in the TIP - holds public meeting on schedule/process for approving the TIP
5/8/96	Council transmits TIP to MPCA for comments.
5/29/95	TAB approves TIP for the purposes of initiating a public comment period.
6/19/96	TAB conducts public hearing.
7/17/96	TAB reviews responses from public comments, and if issues are addressed, adopts TIP and forward it along with responses to comments received, to the Metropolitan Council.
8/8/96	Metropolitan Council approves TIP, conformity determination and sends TIP to Mn/DOT for inclusion in the state TIP.

The TAB and its Technical Advisory Committee are involved in the TIP development and public review processes. The TAB membership provides a forum for the deliberation of regional transportation issues among state, regional and local elected officials, together with private citizens appointed by the Council. The MPCA and Mn/DOT are represented on the TAB. The TAB's comments on the TIP and the Council's response, will be part of the public hearing record attached to the conformity determination documentation when submitted along with the TIP to Mn/DOT for inclusion in the state TIP, and submitted to the U.S. Department of Transportation.

V. CONFORMITY TO THE SIP AND TIMELY IMPLEMENTATION OF TRANSPORTATION CONTROL MEASURES (TCMs)

Pursuant to the Conformity Rule, the Council reviewed the TIP and certifies that the TIP does not conflict with the implementation of the SIP, and conforms to the requirement to expedite implementation of Transportation System Management (TSM) strategies which were the adopted TCMs for the region. Table 5 is a summary and status of the TSM's found in the Transportation Air Quality Control Plan that describes the status of each TSM. Except for TSMs not completed for the reasons cited in Table 5, the majority of the TSMs are completed or in the final stages of completion. Implementation of the TIP will not affect the schedules for completing the remaining TSM projects. It is anticipated that the Transportation Air Quality Control Plan will be revised in the near future as part of a request to the U.S. EPA to designate the Twin Cities Area as an attainment area for CO.

There are no fully adopted regulatory new TCMs or fully funded nonregulatory TCMs that will be implemented during the programming period of the TIP. There are no prior TCMs that were adopted since November 15, 1990, nor any prior TCMs that have been amended since that date.

As part of the process to redesignate the Twin Cities Area as a CO attainment area, the SIP will be amended. During this redesignation process, it is anticipated that TSM's will be removed that are outdated, or no longer appropriate. This process is being initiated by the MPCA.

Table 5 lists two TCMs that are traffic flow amendments to the SIP. The MPCA added them to the SIP since its original adoption. These include a one-way pair in Minneapolis to address air quality problems at a permanent monitoring site at Hennepin Avenue and Lake Street, and in St. Paul, a CO Traffic Management System at the Snelling and University Avenue monitoring site. While not control measures, the MPCA added two additional revisions to the SIP which reduce CO: a vehicle emissions inspection/maintenance program, implemented in 1991, to correct the region-wide carbon monoxide problem, and a federally mandated four-month oxygenated gasoline program implemented in November 1992.

The MPCA has requested that the U.S. EPA add a third revision to the SIP, a contingency measure consisting of a year-round oxygenated gasoline program if the CO standards were violated after 1995. The U.S. EPA has approved this proposal. Because of current state law remains in effect, however, the Twin Cities area had a year-round program starting in 1995, regardless of any U.S. EPA rulemaking. The law provides for the program to go state-wide this year.

Table 5
TRANSPORTATION SYSTEM MANAGEMENT STRATEGIES
LISTED IN THE TRANSPORTATION AIR QUALITY CONTROL PLAN

TWIN CITIES AREA TSM STRATEGIES	STATUS
Vehicle Inspection/Maintenance (listed in Transportation Control Plan as a TSM Strategy)	
• Establish VIM Program	• Program became operational in July 1991
Exclusive Bus/Carpool Lane	
• I-35W Bus/Metered Freeway Project	• Metered freeway access locations have bus and carpool bypass lanes at strategic intersections on I-35W and I-394
• Reserved transit lanes in 3rd Ave. distributor in Minneapolis	• 3rd Ave. distributor project including exclusive bus/carpool lanes was completed in 1992
Alternative Fuels or Engines	
• Gasohol demonstration project	• Council is implementing alternatives fuel testing program for buses initiated in 1992; To be completed in 1996
Cold Start Emissions Reductions	
• Auto plug-in program for cold-start reductions	• Not an adopted strategy after a study of its feasiblility.
Staggered Work Hours	
• Variable work hours implemented by various agencies	• City, county and state employees have flex time programs available. Other employers allow flextime and help support van and carpooling programs. These programs are actively promoted and financially supported by employers.
Improved Public Transit	
• Reduced Metropolitan Council Transit Operations (MCTO) fares	• Special marketing concepts continue to be introduced and tested by the Council to increase ridership.

Table 5
TRANSPORTATION SYSTEM MANAGEMENT STRATEGIES LISTED IN THE TRANSPORTATION AIR QUALITY CONTROL PLAN

TWIN CITIES AREA TSM STRATEGIES	STATUS
• MTCO Downtown Fare Zone	• Special reduced fares for Mpls. and St. Paul downtowns implemented and ongoing.
• Community Centered Transit	• "Opt-out" provisions now allow communities to develop local service. Several community-focused transit hubs are being developed.
• Flexible Transit	• Alternative modes introduced to provide specialized transit service.
• Total Community Service Demonstration (elderly, persons with disabilities service)	• An accessible route service implemented in addition to Metro Mobility service.
• Responsibleness in Routing and Scheduling	• Transit agencies have active planning and communication programs with communities.
• CBD Parking Shuttle	• Shuttle service incorporated with the CBD regular route special fare zone.
• Simplified Fare Structure	• Council implemented a simplified fare structure that consists of a base rate with a rush hour and express service supplemental rates. Structure further revised in 1996.
• Bus Shelters	• Established ongoing program of installing and maintaining bus shelters.
• Rider Information	• Region-wide transit information is available through CBD Transit Stores and a computerized phone system.
• Transit Marketing	• Transit marketing remains an integral part of transit planning and the provision of services by the Council.
• Cost Accounting Transit Performance Funding	• Operation computer models developed to assess transit costs and establish performance measures.
• Transit Maintenance Program	• Construction of new maintenance garages and bus overhaul facilities.
• "Real-time" Monitoring	• ITS "real time" programs implemented on I-394 corridor.
• Park and Ride	• Joint Council-Mn/DOT program for the planning and construction of park-and-ride facilities throughout the region is onging.
Area-wide Carpool Programs	
• Expand Existing Area-wide Shared-ride Programs	• Minnesota Rideshare program is actively marketed by MCTO and was redesigned and expanded in 1994.
On-street Parking Controls	
• Enforcement of Parking Idling and Traffic Ordinances	• Ongoing enforcement aggressively pursued by Mpls. and St. Paul.
Park and Ride/Fringe Parking	
• CBD Fringe Parking Programs in Mpls. and St. Paul	• Mpls. and St. Paul developed and are implementing ongoing programs for fringe parking and incentives to encourage carpooling.
Pedestrian Malls	

Table 5
TRANSPORTATION SYSTEM MANAGEMENT STRATEGIES LISTED IN THE TRANSPORTATION AIR QUALITY CONTROL PLAN

TWIN CITIES AREA TSM STRATEGIES	STATUS
• Nicollet Mall (Mpls.)	• Nicollet Mall renovations and extension completed.
• Pedestrian Facilities/skyway Systems	• Extension of Mpls. skyway system to the fringe parking in the 3rd Ave. distributor is completed.
• CBD Housing and Related Pedestrian Way	• Mpls. and St. Paul continue to promote the expansion of their skyway systems as part of this CBD development process.
Employer Programs for Transit, Paratransit and Bicycles	
• Shared-ride Programs Implemented and Underway in the Metropolitan Area	• A number of Twin Cities employers have van and carpool programs and participate in Minnesota Rideshare program. Technical assistance is provided by the Council.
	• Transportation Management Organizations established in downtown Minneapolis and I-494 Strip in Bloomington continue to operate.
Bicycle Lanes and Storage	
• Bicycle Facilities Implemented by Various Cities in Metropolitan Area	• Provisions for bicycle parking are included in fringe parking facilities for downtown Minneapolis. ISTEA funds are being used to develop bicycle facilities.
Traffic Flow Improvements	
• Minneapolis Computerized Traffic Management System	• Minneapolis system installed. New hardware and software installation completed in 1992.
• St. Paul Computerized Traffic Management System	• St. Paul system completed in 1991.
• New Construction - Minneapolis; 3rd Ave. Distributor, I-35E, St. Paul	• 3rd Ave. distributor with computerized signals completed.
• University and Snelling Avenues, St. Paul; traffic flow improvements	• Improvements completed in 1990 and became fully operational in 1991.

Table 6
MOBILE5A INPUT VALUES

The EPA-MOBILE5A model produced the vehicular CO emissions for the inventory using the following input values:

Auto Registration	1990 7-county area
Gasoline volatility	13.4 RVP
Ambient Temperature	31 degrees F.
Minimum temperature	16 degrees F.
Maximum temperature	38 degrees F.
Coldstarts	20.6% (default)
Hotstarts	27.3% (default)
Altitude	low altitude
Vehicle mix	MOBILE5A - default for light duty vehicles
Inspection/Maintenance - anti tampering program factors	
Start year	1991
Pre-1981 stringency	16%
First model year covered	1976
Waiver rates	4%
Compliance rates	96%
Inspection types covered	centralized
Vehicle types covered	LDGV, LDGT1, LDGT2
Frequency	annual
Anti-tampering inspection - Catalyst, gas cap	
Oxygenated Fuels Factors	
Oxygen content	2.7%
Market share	90%
Alcohol blend RVP waiver	Yes

Note that the MOBILE5A default values were used for the remaining input factors.

Exhibit 1
AVERAGE SPEED BASED ON VOLUME TO CAPACITY RATIOS
(V/C BY FACILITY TYPES AND BY AREA TYPE)
AVERAGE SPEED (MPH)

V/C	FREEWAYS		ARTERIALS		
	CBD/CC	Sub/Rural	CBD	CC	Sub/Rural

APPENDIX C

PROJECTS THAT DO NOT IMPACT REGIONAL EMISSIONS, AND PROJECTS THAT ALSO DO NOT REQUIRE LOCAL CARBON MONOXIDE IMPACT ANALYSIS

Certain transportation projects eligible for funding under Title 23 U.S.C. or the Urban Mass Transportation Act have no impact on regional emissions. These are "exempt" projects that, because of their nature, will not affect the outcome of any regional emissions analyses and add no substance to those analyses. These projects (as described in Section 51.460 of conformity rules) are excluded from the regional emissions analyses required in order to determine conformity of TIPs.

Following is a list of "exempt" projects and their corresponding codes used in column "AQ" of the 1997-2000 TIP. The coding system is revised from previous TIPs to be consistent with the coding system for exempt projects in the proposed Minnesota Pollution Control Agency (MPCA) revision to the State Implementation Plan for Air Quality for Transportation Conformity.

Except for projects given an "A" code or a "B" code, the categories listed under Air Quality should be viewed as advisory in nature, and relate to project spe;cific requirements rather than to the TIP air quality conformity requirements. They are intended for project applicants to use in the preparation of any required federal documents. ultimate responsibility for determining the need for a hot-spot analysis for a porject under 40 CFR Pt. 51, Subp. T (The transportation conformity rule) rests with the U.S. Department of Transportation. The Council has provided the categorization as a guide to project applicants of possible conformity requirements, if the applicants decide to pursue federal funding for the project.

SAFETY

MASS TRANSIT

Operating assistance to transit agencies T-1
Purchase of support vehicles T-2
Rehabilitation of transit vehicles T-3
Purchase of office, shop, and operating equipment for existing facilities T-4
Purchase of operating equipment for vehicles (e.g., radios, fareboxes, lifts, etc.) T-5
Construction or renovation of power, signal, and communications systems T-6
Construction of small passenger shelters and information kiosks T-7
Reconstruction or renovation of transit buildings and structures (e.g., rail or bus buildings, storage and maintenance facilities, stations, terminals, and ancillary structures) T-8
Rehabilitation or reconstruction of track structures, track and trackbed in existing rights-of-way T-9
Purchase of new buses and rail cars to replace existing vehicles or for minor expansions of the fleet T-10
Construction of new bus or rail storage/maintenance facilities categorically excluded in 23 CFR 771 ..... T-11

AIR QUALITY

Continuation of ride-sharing and van-pooling promotion activities at current levels AQ-1
Bicycle and pedestrian facilities AQ-2

NEW EXEMPT PROJECTS ADDED BY THE CONFORMITY RULES

Specific activities which do not involve or lead directly to construction, such as:
Planning and technical studies
Grants for training and research programs
Planning activities conducted pursuant to titles 23 and 49 U.S.C.
Federal-aid systems revisions O-1
Engineering to assess social, economic and environmental effects of the proposed action or alternatives to that action O-2
Noise attenuation O-3
Advance land acquisitions (23 CFR 712 or 23 CRF 771) O-4
Acquisition of scenic easements O-5
Plantings, landscaping, etc. O-6
Sign removal O-7
Directional and informational signs O-8
Transportation enhancement activities (except rehabilitation and operation of historic transportation buildings, structures, or facilities) O-9
Repair of damage caused by natural disasters, civil unrest, or terrorist acts, except projects involving substantial functional, locational, or capacity changes O-10

Projects Exempt from Regional Emissions Analyses that may Require Further Air Quality Analysis

The local effects of these projects with respect to carbon monoxide concentrations must be considered to determine if a "hot-spot" type of an analysis is required prior to making a project-level conformity determination. These projects may then proceed to the project development process even in the absence of a conforming transportation plan and TIP. A particular action of the type listed below is not exempt from regional emissions analysis if the MPO in consultation with other state agencies MPCA, Mn/DOT, the EPA, and the FHWA (in the case of a highway project) or the FTA (in the case of a transit project) concur that it has potential regional impacts for any reason.

Channelization projects include left and right turn lanes and continuous left-turn lanes as well as those turn movements that are physically separated. Signalization projects include reconstruction of existing signals as

well as installation of new signals. Signal preemption projects are exempt from hotspot analysis. Final determination of which intersections require an intersection analysis by the project applicant rests with the U.S.DOT as part of its conformity determination for an individual project.

Projects Exempt from Regional Emissions Analyses

Regionally significant projects

The following codes identify the projects included in the "baseline" and "action" scenarios of the transportation plan amendment air quality analysis.

Non-Classifiable Projects

Certain unique projects cannot be classified as denoted by a "NC." These projects were evaluated through an interagency consultation process and determined not to fit into any exempt nor intersection-level analysis category, but they are clearly not of a nature which would require inclusion in a regional air quality analysis.
