GABRIEL, ROEDER, SMITH & COMPANY ACTUARIES & CONSULTANTS

2090 First National Building Detroit, Michigan 48226 Area 313: 961-3346

June 8, 1981

City of Red Wing Police Relief Association Red Wing, Minnesota

<u>Submitted in this report</u> are the results of the 1979-80 <u>gain/loss analysis</u> of the financial experiences of the Red Wing Police Relief Association.

The <u>composite results</u> of this study are reported on Schedules 1(A) and 1(B) and comments regarding the results are on page 12.

The gain/loss analysis was based upon statistical data furnished by the Association regarding active and retired member changes and related financial transactions.

The actuarial assumptions used for regular valuation purposes and which produce "expected" experience data are shown in the appendix of this report.

Respectfully submitted,

Robert M. O'Keefe Gary W. F

PURPOSE OF GAIN/LOSS ANALYSIS

Actual financial experience will not coincide exactly with assumed financial experience--differences are to be expected since the future cannot be predicted with absolute precision. The changes in computed liabilities resulting from differences between actual and assumed experiences are called actuarial gains if the experience was financially favorable and actuarial losses if the experience was financially unfavorable. Actuarial gains result in decreases in contribution rates and actuarial losses result in increases.

Regular actuarial valuations provide information about aggregate computed liabilities. However, regular valuations do not develop the information needed to explain the year to year changes in computed liabilities attributable to each activity within the retirement system financial mechanism. The purpose of a gain/loss analysis is to determine the change in computed liabilities and contribution rates attributable to variations between actual and assumed experience.

Once a difference between actual and assumed experience in a risk area has been observed to be sizeable and persistent, the assumed experience should be changed to reflect the observed reality. However, gains and losses over a relatively short period of time may not be indicative of long term trends which provide the basis for selection of actuarial assumptions.

Age & Service Retirement.

If members retire at older ages than assumed, there is a gain. If retirements occur at younger ages than assumed there is a loss.

Disability & Death-in-Service.

If casulaty claims are less than assumed, there is a gain. If there are more casualty losses than assumed, there is a loss.

Withdrawal.

If more liabilities are released by withdrawal than assumed, there is a gain.

If there are fewer withdrawals than assumed, there is a loss.

Salary Increases.

If there are smaller salary increases than assumed, there is a gain.

If salary increases are greater than assumed, there is a loss.

Investment Income.

If there is greater investment income than assumed, there is a gain.

If investment income is less than assumed, there is a loss.

Post Retirement Mortality.

If benefit recipients die at younger ages than assumed, there is a gain. If they live longer than assumed, there is a loss.

Contribution.

Gains or losses arise due to the delay in implementing changes in the recommended contribution.

Miscellaneous.

Miscellaneous gains and losses include changes due to data adjustments, rounding and changes in the average age and service characteristics of the group.

Schedule 1(A)

Gains & Losses in Accrued Liabilities and Changes in Contribution Requirements During Calendar 1979

	(Gain)	iabilities or Loss	Contribution Requirements (Gain) or Loss

TOTALS	0	0.2379	0	0.2645

Average age at death: N/A.

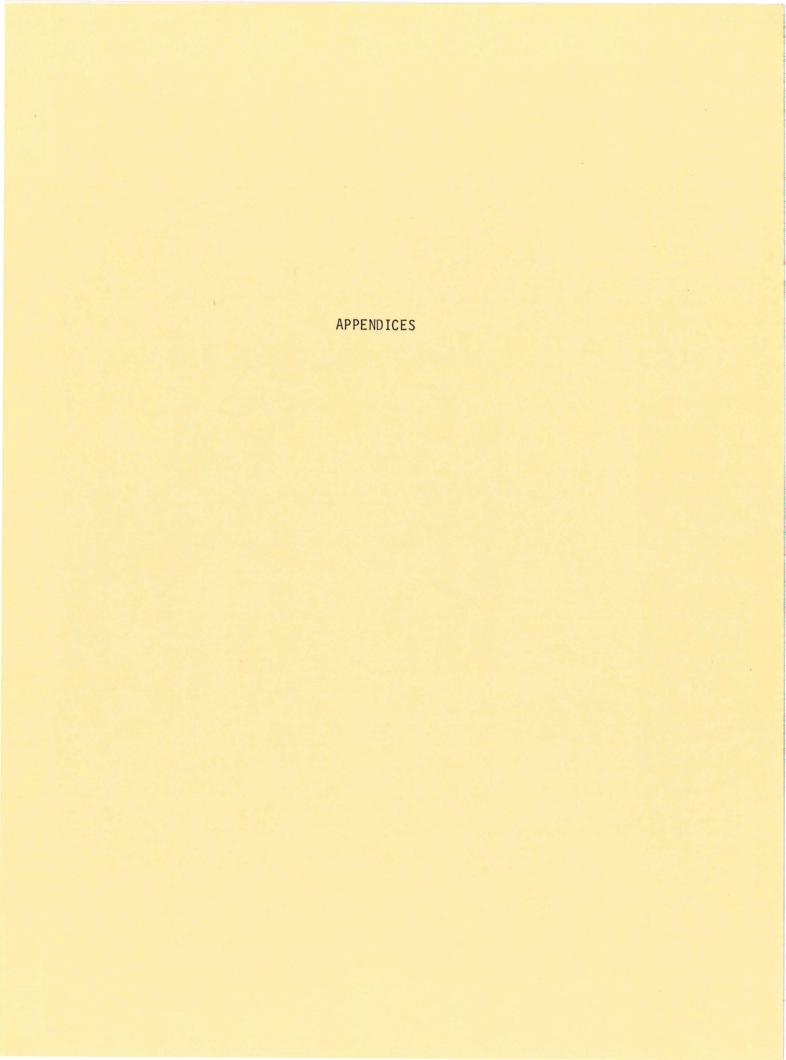

Comments

Miscellaneous Gains or Losses

The miscellaneous loss in 1979 under retirees and beneficiaries is due to the method of valuation of disabled benefits. For the 1978 valuation, it was assumed that all disability benefits were non-escalating.

Effects of Disability Court Settlement

The majority of the loss for disability in 1979 is due to the disability of one participant, B. Nagel. Due to the nature of his court settlement, there was a gain in 1980 under the category of Post-Retirement Mortality.

Valuation Methods and Assumptions

The Entry Age Normal Cost method was used to determine the normal cost of all Disability and death before retirement benefits were valued in previous valuations on a terminal funding basis (one year term cost).

The rate of investment return (interest) used in making the valuation was 5.0 percent per annum, compounded annually.

The mortality table used was the United States Life Table, 1959-61, White Males and White Females.

Red Wing Police Relief Association

Brief Summary (12/31/80) of Benefit Provisions Evaluated and/or Considered

Age & Service Retirement

Eligibility. 20 years of service and 50 years of age.

Amount. 50% of final year's salary for rank held at retirement.

Disability Retirement

<u>Eligibility.</u> Disabled to the extent that no longer able to perform the duties of police officer before being eligible for age & service retirement.

Amount. 50% of salary at time of disability. (Off-set by worker's comp.)

Member's Death While Active, Or In Deferred Status, Or Retired

Eligibility.

Spouse. Legally married to member at time of separation from service and residing with member at time of death. Benefits terminate upon remarriage.

Child. Younger than age 18 and dependent.

Amount.

Spouse. Same as age & service benefit. (Also, family maximum.)
Child. \$300 per child per year.

<u>Vested Deferred.</u> 20 years of service and separated before age 50. Payment beginning is deferred to attainment of age 50.

Post Retirement Adjustments ("Escalator"). Benefits are increased in accordance with CPI increases if on active duty January 1, 1973 or later. (Applied to service, disability, and surviving spouse benefits.)

<u>Member Contributions.</u> 8% of basic salary. Total member contributions are refundable, without interest, if no monthly benefit is payable upon separation from service.
