Appendix II   Meaning of Unfunded Accrued Liabilities

June 3, 1991

Board of Trustees  
Minneapolis Fire Department Relief Association  
Minneapolis, Minnesota

Submitted in this report are the results of the December 31, 1990 actuarial valuation of the assets, actuarial values and contribution requirements associated with the benefits provided by the Minneapolis Fire Department Relief Association.

The valuation results contained in Section A provide the actuarial information needed to determine the employer's "minimum obligation" effective January 1, 1992. Section A also contains comments regarding the valuation results.

The valuation was based upon information furnished by the Association concerning benefits, financial transactions, active members, terminated members, retirants and beneficiaries. Data was checked for year to year consistency but was not otherwise audited by us. This information is summarized in Section B.

A description of the actuarial funding method and the risk experience assumptions used is contained in Section C. The economic risk experience assumptions, as well as the actuarial funding method to be used, are established by state law.

Information needed to comply with Statement No. 5 of the Governmental Accounting Standards Board is contained in Section D.

The actuarial valuation was prepared using generally accepted actuarial principles and practices based upon the methods, assumptions, summary of plan provisions and the member and financial data described in this report.

Respectfully submitted,

   
J. Daniel Petersen      Gary W. Findlay

## **Section A**

### **Valuation Results**

## COMMENTS

### Economic Assumptions and Financing Method

The economic assumptions of 6% annual investment return and 4% annual salary increases are established by state law. State law also specifies that the annual minimum obligation of the municipality shall be determined by adding (i) the employer normal cost percent times covered payroll to (ii) the level dollar amount required to amortize the unfunded actuarial accrued liability by December 31, 2010.

It is worth noting that when the same assumptions and methods are applied to plans which differ in nature, the valuation results may not be comparable. Caution should be exercised when attempting to assess the financial condition of one Association relative to another on the basis of valuation results produced using the assumptions and methods mandated by state law.

### Changes in Benefit Provisions

The December 31, 1990 actuarial valuation reflects the following changes in benefit provisions:

- 1) allowing surviving spouses to remarry and continue receiving benefits.
- 2) member contributions being paid into a separate health insurance account after 25 years of service.

The effect of these changes was to increase the normal cost 0.65% of payroll.

# Minneapolis Fire Department Relief Association

## CONTRIBUTION RATE TO PROVIDE BENEFITS

Member portion & Employer portion  
Effective January 1, 1992

<u>Contributions for</u>	<u>If Paid Equally Throughout Year</u>		
	<u>Normal Cost</u> <u>% of Active</u> <u>Payroll for 1992</u>	<u>+</u>	<u>UAAL Dollars</u>
Normal cost of annuities:			
Age & service: to members	16.66%		
Age & service: to survivors	3.01		
Disability	2.53		
Death before retirement	1.75		
Refunds of member contributions	0.00		
Total Normal Cost	23.95%		

Amortization of unfunded actuarial  
accrued liabilities (UAAL)  
(19 year level dollar payment)

Retired lives	\$	0
Active members		6,757,708
Total		6,757,708

Total Cost of Benefits	23.95%	+	\$6,757,708
------------------------	--------	---	-------------

Member contributions	8.00%
----------------------	-------

### COMPUTED EMPLOYER RATE:

(a) If Paid Equally Throughout Year	15.95%	+	\$6,757,708
(b) IF PAID AT CALENDAR YEAR END	16.17%	+	\$6,850,289

The amount in (b) were computed to adjust for interest according to the following payment pattern:

1. The state amortization aid of \$915,989 is received in 4 equal installments on 3/15, 7/15, 9/15 and 11/15.
2. The balance of the contribution is received as follows:
  - a. 16.0% of the balance is received from the State on 10/15.
  - b. 35.1% of the balance is received from the City on 7/5 and 12/5.
  - c. 2.3% of the balance is received from the City on 7/15, 8/15, 9/15, 10/15, 11/15 and 12/15.

Minneapolis Fire Department Relief Association  
Present Actuarial Condition

---

The actuarial value of the Association's assets (valuation assets) were in excess of \$119.7 million on December 31, 1990 -- a considerable sum of money if unencumbered and allocated among a small group of persons. This is not the case with the Association's assets.

The following schedule puts the \$119.7 million into perspective by showing the relationship between valuation assets, actuarial accrued liabilities, and the number of persons with actual and potential claims on the Association's assets.

	<u>Valuation Assets</u>	<u>Actuarial Accrued Liabilities</u>	<u>Unfunded Actuarial Accrued Liabilities</u>	<u>% Funded</u>
Retirants and Beneficiaries				
Retired Members (361)		\$ 95,015,844		
Surviving Spouses (191)		19,961,136		
Surviving Children (5)		<u>197,208</u>		
Total (557)		\$115,174,188		
Deferred Members (2)		457,992		
Active Members (337)		<u>81,663,269</u>		
Total	\$119,652,021	\$197,295,449	\$77,643,428	60.6%

Actuarial accrued liabilities represent the value, computed as of December 31, 1990 of:

- (i) retirement allowances likely to be paid the 557 retirants and beneficiaries; and
- (ii) the contributions assumed to have been made for the 337 active members from entry into the plan until December 31, 1990.

The value of retirement allowances likely to be paid the 557 retirants and beneficiaries, discounted for investment earnings and mortality, was computed to be \$115,174,188 as of December 31, 1990. To put this amount in perspective, the \$115,174,188, together with investment earnings, will just be sufficient to pay the 557 retirants and beneficiaries their allowances for their remaining lifetimes. This assumes the 557 retirants and beneficiaries live and die according to the assumed mortality and the \$115,174,188 is invested to yield an average annual return of 6.0% over the remaining lifetimes of the retirants and beneficiaries and the benefit payments increase according to the actuarial assumptions and benefit provisions shown in this report.

With respect to the active members, the actuarial accrued liability of \$81,663,269 represents the amount that would have been accumulated by December 31, 1990. This assumes the normal cost (which is expressed as a level percentage of pay) had been contributed from the date of hire until December 31, 1990 for the 337 actives, and that these amounts had earned 6.0% interest. It also assumes that the members in the past have lived, died, withdrawn, retired and received salary increases according to the actuarial assumptions and benefit provisions shown in this report.

Historical Funding Ratio Schedule  
(\$ in thousands)

<u>Valuation Date December 31</u>	<u>Actuarial Accrued Liabilities</u>	<u>Valuation Assets</u>	<u>% Funded</u>
1981	\$140,009	\$21,453	15.3%

Minneapolis Fire Department Relief Association  
CONTRIBUTION FOR CALENDAR YEAR EFFECTIVE JANUARY 1, 1992

---

For any period of time the percent-of-payroll contribution rate is converted to dollars. The amount of dollars for any calendar year depends upon the results of the last actuarial valuation, and the timing of contributions within the year. The later the contribution date, the greater the dollar amount will be.

The municipality's dollar contribution for the year may be determined as follows:

(1)	Estimated covered payroll for 1992		\$ _____
(2)	Total normal cost % from page A-2		23.95%
(3)	Total normal cost (Line 1 times line 2)		\$ _____
(4)	Amortization payment on UAAL from page A-2		6,757,708
(5)	Total contributions required (Line 3 plus line 4 plus line 5)		_____
(6)	Employee contributions (Line 1 times 8%)		\$ _____
(7)	(a) State amortization aid based on 12/31/78 UAAL of \$98,227,435	\$712,190	
	(b) State amortization aid based on 1984 legislation	<u>203,799</u>	
	(c) Total State amortization aid		915,989
(8)	Estimated insurance premium aid		_____
(9)	Estimated total contributions from other sources (Line 7 plus line 8 plus line 9)		_____
(10)	Employer's Minimum Obligation if payment is made in equal installments throughout the year (Line 6 minus line 10)		\$ _____
(11)	EMPLOYER'S MINIMUM OBLIGATION IF PAYMENT IS MADE AT YEAR END (Line 11 times 1.0137)		\$ _____

\* State amortization aid reduced by Police Relief Association pro-rata share of \$1,520,000 reduction in amortization aid called for by the 13th check legislation. The potential additional reduction which would result from "excess" investment income during 1990 was not considered.

Minneapolis Fire Department Relief Association

Brief Summary (12/31/90) of Benefit Provisions Evaluated and/or Considered

---

Age & Service Retirement

Eligibility. 20 years of service and 50 years of age.

Amount. For first 19 years of service, 29.45/80 of base pay and 3.55/80 is added for the 20th year of service. For service in excess of 20 years, an additional 1/80 is provided for each of the first 4 years and 4/80 is added for the 25th year to a maximum of 41/80 of base pay for 25 or more years of service.

Pay Used for Plan Purposes. "Base pay" means the maximum monthly salary of a first grade firefighter.

Disability Retirement

Eligibility.

First Class Disability. Disabled to the extent that no longer able to perform the duties of a firefighter or any manual labor.

Second Class Disability. Disabled to the extent that no longer able to perform duties of a firefighter but able to perform light manual labor or office work.

Third Class Disability. Disable to the extent that no longer able to perform duties of a firefighter but able to perform other manual labor.

Amount.

First Class Disability. 41/80 of base pay.

Second Class Disability. 33/80 of base pay.

Third Class Disability. 25/80 of base pay.

Member's Death While Active, Or In Deferred Status, Or Retired

Eligibility.

Spouse. Married to member at separation from service and residing with member at time of death. (For service or deferred retirement, must have been married

at least one year before separation from service.)

Child. Younger than age 18 or, if full-time student, younger than age 22.

Amount.

Spouse. 21/80 of base pay.

Child. 8/80 of base pay per child. Children's maximum is 20/80 if spouse is receiving or 41/80 if no spouse is receiving.

Vested Deferred. 5 years of service. Payment beginning is deferred to attainment of age 50.

Post-Retirement Adjustments ("Escalator"). Each time base pay is changed, payments to all benefit recipients are changed simultaneously by the same percent that base pay is changed.

Member Contributions. 8% of base pay. After 25 years of service, member contributions are paid to a separate health insurance account. Member contributions are non-refundable.

# Minneapolis Fire Department Relief Association

## Derivation of Valuation Assets

Valuation Date <u>December 31</u>	<u>(a)</u> Market Value	<u>(b)</u> Book Value	<u>(c)</u> Market- Book
1988	\$ 94,887,190	\$ 87,328,260	\$ 7,558,930
1989	117,083,362	99,318,198	17,765,164
1990	120,809,562	106,411,204	14,398,358
(d) Average Unrealized Gain			<u>\$ 13,240,817</u>
(e) Excess Investment Income*			<u>0</u>
(f) Assets 12/31/90 (Book Value 12/31/90 + (d) - (e))			<u><u>\$119,652,021</u></u>

\* Excess investment income was reported by Minneapolis Fire Department Relief Association to be zero.

## **Section C**

### **Valuation Methods and Assumptions**

# Minneapolis Fire Department Relief Association

## Valuation Methods and Assumptions

The Entry Age Normal Cost method was used to determine the normal cost of all benefits. The rate of investment return (interest) as required by state law used in making the valuation was 6.0 percent per annum, compounded annually. Age & service retirement was assumed to occur at age 57, attained age if older. It was further assumed that 85% of the members would have eligible beneficiaries.

## **Section D**

**The Pension Benefit Obligation  
and Certain Other Disclosures  
Required by Statement No. 5 of the  
Governmental Accounting Standards Board**

## PENSION BENEFIT OBLIGATION

---

The amount shown below as the "pension benefit obligation" is a standardized disclosure measure of the present value of pension benefits, adjusted for the effects of projected salary increases, estimated to be payable in the future as a result of employee service to date. The measure is the actuarial present value of credited projected benefits and is intended to (i) help users assess the plan's funding status on a going-concern basis, (ii) assess progress being made in accumulating sufficient assets to pay benefits when due, and (iii) allow for comparisons among public employee retirement plans. The measure is independent of the actuarial funding method used to determine contributions to the plan.

The pension benefit obligation was determined as part of an actuarial valuation of the plan as of December 31, 1990. Significant actuarial assumptions used in determining the pension benefit obligation include (a) a rate of return on the investment of present and future assets of 6.0% per year compounded annually, (b) projected salary increases of 4.0% per year compounded annually, attributable to inflation, and (c) the assumption that benefits will increase 4.0% per year after retirement.

At December 31, 1990, the unfunded pension benefit obligation was \$84,761,277 determined as follows:

### Pension Benefit Obligation:

Retirants and beneficiaries currently receiving benefits and terminated employees not yet receiving benefits	\$115,632,180
Current employees --	
Accumulated employee contributions including allocated investment income	0
Employer financed	<u>75,540,301</u>
Total Pension Benefit Obligation	\$191,172,481
Net assets available for benefits, at cost (market value was \$120,809,562)	<u>106,411,204</u>
Unfunded Pension Benefit Obligation	\$ 84,761,277

The total pension benefit obligation as of January 1, 1990 was \$187,552,009. During the year, the plan experienced a net change of \$3,620,472 in the pension benefit obligation.

## CONTRIBUTIONS REQUIRED AND CONTRIBUTIONS MADE

The Association's funding policy provides for periodic employer contributions at actuarially determined rates that, expressed as percentages of annual covered payroll, are designed to accumulate sufficient assets to pay benefits when due. The normal cost and actuarial accrued liability are determined using an entry age actuarial funding method. Unfunded actuarial accrued liabilities are being amortized as a level dollar amount over a period of 19 years.

During the year ended December 31, 1990, contributions totaling \$10,332,467 -- \$9,198,097 employer and \$1,134,370 employee -- were made in accordance with contribution requirements determined by an actuarial valuation of the plan as of December 31, 1988. The employer contributions consisted of \$2,158,819 for normal cost and \$7,039,278 for amortization of the unfunded actuarial accrued liability. Employer contributions represented 65.49% of covered payroll.

Significant actuarial assumptions used to compute contribution requirements were the same as those used to compute the standardized measure of the pension benefit obligation.

### Computed Contribution Comparative Schedule

Fiscal Year December 31	Valuation Date December 31	<u>Contribution Rates</u>		Valuation Payroll	<u>Dollar Contribution For Fiscal Year</u>	
		Normal Cost % of Valuation Payroll	UAAL Dollars		Computed	Actual
1987	1985	19.28%	\$8,906,560	\$14,291,838	\$11,662,026	\$11,810,118
1988	1986	19.23	8,633,067	14,190,588	11,361,917	11,470,785
1989	1987	19.19	8,311,114	14,431,511	11,080,521	11,147,809
1990*#	1988	15.37	7,793,970	14,045,668	9,952,789	9,198,097
1991	1989	15.33	6,957,374	14,067,027	9,113,849	
1992#	1990	15.95	6,757,708	13,854,744	8,967,540

## ANALYSIS OF FUNDING PROGRESS

Valuation Date <u>December 31</u>	(1) Net Assets Available for Benefits	(2) Pension Benefit Obligation (PBO)	(3) Percent Funded (1)/(2)	(4) Unfunded PBO (2)-(1)	(5) Annual Covered Payroll	(6) Unfunded PBO as a Percentage of Covered Payroll (4)/(5)
1987	\$ 79,157,282	\$189,250,921	41.8%	\$110,093,639	\$14,431,511	762.9%
1988	87,328,260	183,297,021	47.6	95,968,761	14,045,668	683.3
1989	99,749,893	187,552,009	53.2	87,802,116	14,067,027	624.2
1990	106,411,204	191,172,481	55.7	84,761,277	13,854,744	611.8

Analysis of the dollar amounts of net assets available for benefits, pension benefit obligation, and unfunded pension benefit obligation in isolation can be misleading. Expressing the net assets available for benefits as a percentage of the pension benefit obligation provides one indication of the plan's funded status on a going-concern basis. Analysis of this percentage over time indicates whether the system is becoming financially stronger or weaker. Generally, the greater this percentage, the stronger the plan. The unfunded pension benefit obligation and annual covered payroll are both affected by inflation. Expressing the unfunded pension benefit obligation as a percentage of annual covered payroll approximately adjusts for the effects of inflation and aids analysis of the progress being made in accumulating sufficient assets to pay benefits when due. Generally, the smaller this percentage, the stronger the plan.

## APPENDIX I

### FINANCIAL PRINCIPLES AND OPERATIONAL TECHNIQUES

---

Promises Made, and Eventually Paid. As each year is completed, the plan in effect hands an "IOU" to each member then acquiring a year of service credit -- the "IOU" says: "The Pension Plan owes you a portion of your retirement benefits, payments to be made in cash, commencing when you qualify for retirement."

The related key financial questions are: Which generation of taxpayers contributes the money to cover the IOU? The present taxpayers, who receive the benefit of the member's present year of service? Or the future taxpayers, who happen to be in town paying taxes at the later time when the IOU becomes a cash demand?

A sound principle of sound retirement plan financing is to have this year's taxpayers contribute the money to cover the IOUs being handed out this year. By following this principle, THE CONTRIBUTION RATE WILL REMAIN APPROXIMATELY LEVEL FROM GENERATION TO GENERATION -- our children and grandchildren will contribute the same percents of active payroll we contribute now.

#### A PENSION PLAN BECOMES CLOSED

The diagram in this appendix shows two important activities which occur after a plan has been closed to employees hired in the future.

Cash benefits paid continue to increase for decades, while active member payroll begins to decrease to zero.

Funding Method. A funding method is the long-term, planned pattern for employer contributions.

For an open plan (a plan covering future employees), the level-percent-of-active-member payroll funding method is the basic funding method.

The level-percent funding method can also be applied to a closed plan. However, the resulting contribution percent usually jumps to a high rate, because the number of covered active members is decreasing.

A preferred funding method for a closed plan consists of: level-percent funding for normal cost (the cost of members' service now being rendered); plus a level dollar contribution for unfunded actuarial accrued liabilities over a limited period of years. The period of years must be limited so that plan assets don't become zero while benefits are still payable.

Computing Contributions To Support Plan Benefits. From a given schedule of benefits and from the employee data and asset data furnished him, the actuary determines the contribution rates to support the benefits by means of an actuarial valuation and a funding method.

In making an actuarial valuation, assumptions must be made regarding anticipated financial experiences for the next year and for decades in the future. Only the subsequent actual experience of the plan can indicate the degree of accuracy of the assumptions.

Reconciling Differences Between Assumed Experience and Actual Experience. Once actual experience has occurred and been observed, it will not coincide exactly with assumed experience, regardless of the wisdom of the assumptions or the skill of the actuary and the millions of calculations he made. The future can be predicted with considerable but not 100% precision, except for inflation which seems to defy reliable prediction.

A well-managed plan copes with these continually changing differences by having periodic actuarial valuations. Each actuarial valuation is a complete recalculation of assumed future experience, taking into account all past differences between assumed and actual experience. The result is continuing adjustment in financial position.

# A CLOSED PENSION PLAN

A plan becomes closed when no new hires are admitted to active membership. The persons covered by the plan at the time of closing continue their normal activities and continue to be covered by the plan, until the last survivor dies.

**CASH BENEFITS LINE.** After a pension plan becomes closed, the usual pattern is for cash benefits to continue to increase for decades of time. Eventually the cash benefits will peak, and then gradually decrease over more decades of time, ultimately to zero. The last cash benefit is likely to occur a century after the time the plan is closed.

The precise amounts of cash benefits cannot be known now, and must be estimated by assumptions of future experiences in a variety of financial risk areas.

## APPENDIX II

### MEANING OF UNFUNDED ACCRUED LIABILITIES

---

Almost every pension plan (public or private) has "unfunded accrued liabilities", so whatever they are, they aren't rare. Since the term is not part of everyday conversation, it needs some definition.

"Accrued liabilities" are the present value \$ of plan promises to pay benefits in the future based upon service already rendered - - - a liability has been established ("accrued") because the service has been rendered, but the resulting monthly cash benefit may not be payable until years in the future. Accrued liabilities \$ are the result of complex mathematical calculations, which are made by the plan's actuary (which is the name given to the specialist who makes such calculations).

If "accrued liabilities" at any time exceed the plan's accrued assets (cash & investments), the difference is "unfunded accrued liabilities". This is the common condition. If the plan's assets equalled the plan's "accrued liabilities", the plan would be termed "fully funded". This is a rare condition.

Each time a plan adds a new benefit which applies to service already rendered, an "accrued liability" is created, which is also an "unfunded accrued liability" because the plan can't print instant cash to cover the accrued liability. Payment for such unfunded accrued liabilities is spread over a period of years, commonly in the 20-40 year range.

Unfunded accrued liabilities can occur in another way: If actual financial experience is less favorable than assumed financial experience, the difference is added to unfunded accrued liabilities. In plans where plan benefits are directly related to an employee's pay near time of retirement (a common plan provision) rather than his average pay throughout his working career, unfunded accrued liabilities have been increasing in recent years because unexpected rates of pay increase have created additional accrued liabilities which could not be matched by reasonable investment results. Some of these unexpected pay increases are the direct result of inflation, which is a very destructive force on financial stability.

The existence of unfunded accrued liabilities is not bad, then (any more than a mortgage on your house is "bad"), but the changes from year to year in amount of unfunded accrued liabilities are important - - - "bad" or "good" or somewhere in between.

Nor are unfunded accrued liabilities a bill payable immediately (your food costs are payable immediately), but it is important that policy-makers prevent the amount from becoming unreasonably high and it is vital that your plan have a sound method for making payments toward them so that they are controlled.

The existence of large amounts of unfunded accrued liabilities indicates that total contributions in past years were less than level - - - an almost certain history if retired life liabilities are not fully funded now.
