June 24, 1982

Board of Trustees Rochester Fire Department Relief Association Rochester, Minnesota

<u>Submitted in this report</u> are the results of the 1981 <u>gain/loss analysis</u> of the financial experiences of the Rochester Fire Department Relief Association.

The <u>composite results</u> of this study are reported on Schedule 1, and comments regarding the results are on page 10.

The gain/loss analysis was based upon statistical data furnished by the Association regarding active and retired member changes and related financial transactions.

The actuarial assumptions used for regular valuation purposes and which produce "expected" experience data are shown in the appendix of this report. A brief summary of the Association's benefits is also included in the appendix.

Respectfully submitted, ang 1. Findlay ary W. Findlay Robert M. 0'Keefe Garv

PURPOSE OF GAIN/LOSS ANALYSIS

Actual financial experience will not coincide exactly with assumed financial experience--differences are to be expected since the future cannot be predicted with absolute precision. The changes in computed liabilities resulting from differences between actual and assumed experiences are called <u>actuarial gains</u>, if the experience was financially favorable and <u>actuarial losses</u>, if the experience was financially unfavorable. Actuarial gains result in decreases in contribution rates and actuarial losses result in increases.

Regular actuarial valuations provide information about aggregate computed liabilities. However, regular valuations do not develop the information needed to explain the year to year changes in computed liabilities attributable to each activity within the retirement system financial mechanism. <u>The purpose of a gain/loss analysis</u> is to determine the change in computed liabilities and contribution rates attributable to variations between actual and assumed experience.

Once a difference between actual and assumed experience in a risk area has been observed to be sizeable and persistent, the assumed experience should be changed to reflect the observed reality. However, gains and losses over a relatively short period of time may not be indicative of long term trends which provide the basis for selection of actuarial assumptions.

ACTIVITY WHICH RESULTS IN GAINS OR LOSSES

Age & Service Retirement.

If members retire at older ages than assumed, there is a gain. If retirements occur at younger ages than assumed there is a loss.

Disability & Death-in-Service.

If casualty claims are less than assumed, there is a gain. If there are more casualty losses than assumed, there is a loss.

Withdrawal.

If more liabilities are released by withdrawal than assumed, there is a gain. If there are fewer withdrawals than assumed, there is a loss.

Salary Increases.

If there are smaller salary increases than assumed, there is a gain.

If salary increases are greater than assumed, there is a loss.

Investment Income.

If there is greater investment income than assumed, there is a gain.

If investment income is less than assumed, there is a loss.

Post Retirement Mortality.

If benefit recipients die at younger ages than assumed, there is a gain. If they live longer than assumed, there is a loss.

Contribution.

Gains or losses arise due to the delay in implementing changes in the recommended contribution.

Miscellaneous.

Miscellaneous gains and losses include changes due to data adjustments, rounding and changes in the average age and service characteristics of the group.

COMMENTS

Economic Assumptions and Financing Method

The economic assumptions of 5% annual investment return and 3 1/2% annual salary increases are established by state law. State law also specifies that the annual minimum obligation of the municipality shall be determined by adding (i) the employer normal cost percent times covered payroll to (ii) the <u>level dollar</u> amount required to amortize the unfunded accrued liability by December 31, 2010.

Over the past few years, both the actual rates of salary increase and investment return have generally exceeded the assumed rates, resulting in increases in the dollar amount of unfunded accrued liabilities. If the financial experiences of recent years persist, and the economic assumptions and financing method are not changed, it is reasonable to expect that unfunded accrued liabilities will increase in actual dollar amount for a number of years. This is true even though a level dollar amortization schedule is being followed. Accordingly, it is reasonable to expect that under the described conditions the actual dollar contributions required to make amortization payments will increase for a number of years. On the other hand, if inflation subsides and actual economic activity approaches assumed experience, it is reasonable to expect the dollar amount of the contribution to amortize the unfunded accrued liability to remain relatively constant. The notion that amortization dollar amounts may be increasing is not necessarily cause for alarm. If adjusted for changes in purchasing power, any future increases in the dollar contributions may or may not reflect increases in terms of real dollars (inflation adjusted dollars).

It is also worth noting that when the same assumptions and methods are applied to plans which differ in nature, the valuation results may not be comparable (for example, it is currently not valid to compare valuation results for a plan having full escalation to valuation results for a plan having a 3 1/2% cap on escalation.) Caution should be exercised when attempting to assess the financial condition of one Association relative to another on the basis of valuation results produced using the assumptions and methods mandated by state law.

Miscellaneous Gain

The Miscellaneous Gain under Retirant and Beneficiaries is due to correction in the treatment of a disabled member. This member was treated last year as eligible for full escalation although he is only eligible for half escalation. This correction produced a gain of \$124,300

This gain was partially offset by losses of \$29,200 arising from corrections in the date of birth of retired members and surviving spouses.

APPENDICES

Valuation Methods and Assumptions

The Entry Age Normal Cost method was used to determine the normal cost of all benefits.

The rate of investment return (interest) used in making the valuation was 5.0 percent per annum, compounded annually. State law requires use of this assumption.

The mortality table used was the United States Life Table, 1959-61, White Males and White Females.

45 50 55		0.26 0.49 0.89	

Brief Summary (12/31/81) of Benefit Provisions Evaluated and/or Considered

Age & Service Retirement

Eligibility. 20 years of service and 50 years of age if hired before 7/1/69. 20 years of service and 55 years of age if hired after 6/30/69.

<u>Amount.</u> For first 20 years of service, 35/75 of base pay. For each year in excess of 20, 1/75 is added up to a maximum of 42/75 of base pay for 27 or more years of service. In addition, and not subject to the maximum above, 1/2% of base pay is paid for each year of service over 25. The latter additional benefit is not subject to the post retirement adjustment provisions.

<u>Pay Used For Plan Purposes.</u> "Base pay" means the salary of a first class firefighter.

Disability Retirement

<u>Eligibility.</u> Permanently disabled to the extent that no longer able to perform the duties of a firefighter before being eligible for regular retirement. <u>Amount.</u> 36/75 of base pay.

Member's Death While Active, Or In Deferred Status, Or Retired Eligibility.

<u>Spouse</u>. Legally married to member at least one year before separation from service and residing with member at time of death. Benefits terminate upon remarriage.

Child. Younger than age 18.

Amount.

Spouse. 18/75 of base pay.

<u>Child.</u> 6/75 of base pay per child. Children's maximum is 18/75 if spouse is receiving or 36/75 if no spouse is receiving.

<u>Vested Deferred.</u> 20 years of service and separated before reaching eligible retirement age. Payment is deferred to attainment of age 50 or 55 depending on date hired.

<u>Post Retirement Adjustments ("Escalator").</u> If hired before 7/1/69, each time base pay is changed, payments to benefit recipients are simultraneously changed by the same percent that base pay is changed. If hired after 6/30/69, changes in benefits are equal to 1/2 of changes for those hired before 7/1/69.

<u>Member Contributions.</u> 8% of base pay. 75% of total member contributions is refundable, without interest, if no monthly benefit is payable upon separation from service.

<u>Medical, Accident, or Hospitalization Expenses (Active Members)</u>. If expenses exceed amount provided by municipal plan, and member has paid \$100 of the excess, additional expenses up to \$500 may be paid by the association for any one illness.
