Table of Contents

Introduction

Introduction	i
Section Descriptions and Notes	i

Section A: Demographics

Table 1: Estimated Population by Age and Sex	A-1
Table 2: Minnesota Population by Race and Ethnicity by State and County	A-23
Table 3: Selected Minnesota Population Statistics by State and County	A-25
Table 4: Selected Minnesota Demographics	A-27
Table 5: Selected Minnesota Socioeconomic Statistics by State and County	A-29
Table 6: Medical Assistance and GAMC Average Monthly Enrollment by State and County	A-31
Table 8: Medical Assistance and MinnesotaCare Programs	A-33
Table 9: School Enrollment by Race/Ethnicity	A-35

Section B: Natality

Table 1: Selected Minnesota Natality Statistics by State and County	B-1
Table 2: Prematurity and Low Birth Weight in Singleton Births in Minnesota by State and County	B-3
Table 3: Infant Mortality by State and County	B-5
Table 4: Prenatal Care in Minnesota by State and County	B-7
Table 5: Cesarean Births in Minnesota by State and County	B-9
Table 6: Fertility and Family Planning in Minnesota by State and County	B-11
Table 7: Minnesota Teen Births and Pregnancies by State and County	B-13
Table 8: Socio-Demographic Factors Related to Birth Outcomes in Minnesota by State and County	B-15
Table 9: Race and Ethnicity of Mother in Minnesota by State and County	B-17

Section C: Mortality

Table 1: Minnesota Leading Causes of Death by Age Group by State and County	C-1
Table 2: Minnesota Years of Potential Life Lost to Age 65 and 75 by State and County	C-5
Table 3a: Number of Fatal Unintentional Injuries, Homicides and Suicides in Minnesota by State and County	C-10
Table 3b: Number of Fatal Fall, Motor Vehicle and Pedestrian Injuries in Minnesota by State and County	C-12
Tables 4a, b & c: Number and Percent of Cancer Deaths by Type of Cancer Site and Sex in Minnesota	C-14

Section D: Morbidity and Utilization

Table 1: Number of Cases of Vaccine Preventable Disease Morbidity in Minnesota by State and County	D-1
Table 2: Number of Cases of Sexually Transmitted Diseases Reported in Minnesota by State and County	D-3
Table 3: Number of Other Selected Diseases Reported in Minnesota by State and County	D-5
Table 4: Motor Vehicle Injuries by Severity by State and County	D-7
Table 5: Seatbelt Use by Vehicle Occupant Killed or Injured by State and County	D-9
Tables 6, 7 and 8: Number and Percent of Cases of Cancer Diagnosed by Major Site and Sex in Minnesota	D-11
Table 9: Minnesota Nonfatal TBI and SCI Number and Rate per 100,000 by State and County	D-17
Table 10: Minnesota Behavioral Risk Factors of Adults by State and County	D-20
Table 11: Minnesota Behavioral Risk Factors of Adults by State and County	D-22

Table of Contents

Section E: Chemical Health

Table 1: Minnesota Alcohol-Related Motor Vehicle Fatalities by State and County	E-1
Table 2: Minnesota Alcohol-Related Motor Vehicle Injuries by State and County	E-3
Table 3: Minnesota Alcohol-Related Motor Vehicle Crashes by State and County	E-5
Table 4: Minnesota Driving While Impaired Violations – Number and Rate per 10,000 Population by State and County of Occurrence	E-7
Notes about Chemical Health Indicators	E-9

Section F: Environmental Health

Environmental Health - Blood Lead.....	F-1
Table 1: Number of Blood Lead Level Tests by State and County	F-2
Environmental Health - Foodborne and Waterborne Disease Outbreaks.....	F-4
Table 2: Foodborne and Waterborne Disease Outbreaks in Minnesota by State and County	F-5
Environmental Health - Hazardous Substances Emergency Events Surveillance.....	F-7
Table 3: Average Hazardous Material Releases, Injuries, Evacuations, and Chemicals per Event in Minnesota by State and County	F-8

Introduction

The Minnesota County Health Tables (MCHT) replaced the County Health Profiles (CHP) in 2001. The County Health Profiles for 1996, 1998 and 2000 are still available on the Minnesota Planning website, <http://www.lmic.state.mn.us/datanetweb/health.html>

Users of the Minnesota County Health Tables must be aware that all data are subject to potential error. Sources of these errors include under-registration, informant or respondent errors, sampling errors, and data processing errors. Every effort has been made to minimize these errors. However, the most dangerous error remains that of the inaccurate interpretation of data that has been provided.

The user should review the definitions of terms used in the Minnesota County Health Tables. The data included in this publication are from the most recently available year(s). In an area of small population the presence or absence of a relatively rare health event should not be used to confirm or deny a specific public health problem.

Section Descriptions and Notes

Section A: Demographics Tables

This section includes selected demographic statistics from various sources, including the U.S. Census Bureau, Minnesota State Demographer's Office, and the Minnesota Departments of Human Services, Economic Security and Education.

Section B: Natality Tables

This section includes various birth statistics collected from Minnesota birth certificates which are filed with the Office of the State Registrar, Minnesota Department of Health.

All birth data in this section are by county of residence.

Section C: Mortality Tables

This section includes various death statistics collected from Minnesota death certificates which are filed with the Office of the State Registrar, Minnesota Department of Health. Mortality data in this publication are classified using the International Classification of Diseases, version 10 (ICD-10). Version 10 has been used since 1999. From 1979-1998, ICD-9 was used for coding deaths. The ICD-10 differs from ICD-9 in a number of respects although the overall content is similar. The change from ICD-9 to ICD-10 should be taken in consideration when comparing 1999 and newer mortality data to previous years. For more information on ICD-10, please refer to the Centers for Disease Control and Prevention website, <http://www.cdc.gov/nchs/about/major/dvs/icd10des.htm>

All death data in this section are by county of residence.

Section D: Morbidity and Service Utilization Tables

Included in this section are surveillance data on cancer, sexually transmitted diseases, traumatic brain injuries, survey data on behavioral risk factors and utilization data. The Minnesota Student Survey results are not included in this section but can be found on the Center for Health Statistics Website: <http://www.health.state.mn.us/divs/chs/mss/>

Section E: Chemical Health

The Chemical Health section focuses on alcohol use. Data in this section include percent of fatalities in which alcohol use was involved and driving while intoxicated. Unless specified these data are by county of occurrence. Adult chemical health use data from the Behavioral Risk Factor Surveillance System are in Section D. Youth chemical use data from the Minnesota Student Survey are located on the Center for Health Statistics website: <http://www.health.state.mn.us/divs/chs/mss/>

Section F: Environmental Health Tables

The Environmental Health Section includes county-specific summary data from the following Environmental Health programs: blood lead; foodborne/waterborne disease outbreaks; hazardous substance emergency events surveillance; and radioactivity and radiation. This section contains a description of the health hazard; the most current data available, generally summarized by county and state; and any limitations or biases to be considered before using the data.

Source: U.S. Census Bureau: Census Estimates, www.census.gov

Elderly Age Dependency Ratio: The number of persons aged 65 or over per 100 persons in the population aged 15 through 64 years.

Percent Elderly: The percent of total population comprised of persons aged 65 and over.

Total Age Dependency Ratio: The number of children under 15 years of age plus the number of persons aged 65 and over per 100 persons in the population aged 15 through 64 years.

Child Age Dependency Ratio: The number of children under 15 years of age per 100 persons in the population aged 15 through 64 years.

Sources: Total Per Capita Income - MN State Demographer; Unemployment Annual Average - Minnesota Department of Economic Security; Food Stamps - Minnesota Department of Human Services; WIC - Minnesota Department of Health All Ages in Poverty - US Census, Small Area Income and Poverty Estimates (SAIPE)

Total Per Capital Income: These data were from the Minnesota State Demographer

Food Stamps: A Federal program which supplements the food-purchasing ability of low-income households through the distribution of coupons which can be used to purchase food for human consumption.

WIC Participants - Unduplicated Counts: The total number of pregnant, post-partum and nursing women, infants and children less than 5 years of age who received WIC vouchers. County level data are determined by combining unduplicated participants of all clinics within a county's boundaries. State total does not equal the sum of the counties because participants may move counties during the year.

MFIP-MA: Medical Assistance eligibility based on receipt of cash assistance from MFIP. Counts include both fee-for-service and HMO enrollees.

GAMC (General Assistance Medical Care): Most enrollees are eligible on a medical-only basis; fewer than one-third are eligible based on receipt of cash assistance from General Assistance. Counts include both fee-for-service and HMO enrollees.

Medical Assistance: This category excludes AFDC-MA enrollees. Enrollees over age 21 may be eligible as parents or based on disability. Those eligible as disabled may be SSI recipients. Counts include both fee-for-service and HMO enrollees and non-citizen Medical Assistance recipients.

MinnesotaCare: MinnesotaCare children and pregnant women are Medicaid eligible under a waiver. MinnesotaCare coverage is provided under HMO arrangements.

Source: Minnesota Department of Health, Center for Health Statistics and the US Census.

Fertility Rate: The number of live births per 1,000 women in the population of age 15 - 44 years.

Birth Rate: The number of live births per 1,000 population.

Death Rate: The number of deaths per 1,000 population

Natural Rate of Increase: The percent change in the population due to the difference in the birth rate and death rate.

*Rate not calculated for less than 20 events

Infant Mortality Rate: Number of infant deaths under one year of age per 1,000 live births.

Neonatal Death Rate: Number of infants dying under 28 days of age per 1,000 live births.

Postneonatal Mortality Rate: The number of infant deaths aged 28 days to one year per 1,000 live births.

Fetal Mortality Rate: The number of fetal deaths (deaths prior to the complete expulsion or extraction of a product of conception from its mother, irrespective of the duration of pregnancy, only fetal deaths of 20 weeks or more are reported) per 1,000 live births plus fetal deaths.

Perinatal Mortality Rate: The number of fetal deaths of 20 weeks or greater plus the number of deaths to infants 0-6 days per 1000 live births plus fetal deaths of 20 weeks or greater.

GINDEX: A prenatal care index determined by combining measures of the month or trimester prenatal care began, the number of prenatal visits, and the gestational age of the infant/fetus at the time of birth. The GINDEX includes gestational age over 36 weeks, and number of prenatal visits greater than nine to impute adequacy of prenatal care.

Adequate or Better: Prenatal care started in the 1st trimester *and* the woman had an adequate number of visits.

Intermediate: Prenatal care started in the 1st or 2nd trimester *and* the woman had an intermediate range of visits.

Inadequate or None: No prenatal care or the prenatal care started in the 3rd trimester *or* the woman had an inadequate range of visits, regardless of when prenatal care began.

Source: Minnesota Department of Health, Acute Disease Epidemiology

¹Lyme disease is caused by bites from blacklegged ticks (deer ticks), which are found in wooded areas of north-central, eastern, and southeastern Minnesota and western Wisconsin. Most Minnesotans with Lyme disease lived or traveled to these areas. County of residence does not always indicate county of tick exposure.

For more information on tick- and mosquito-borne diseases, please refer to the MDH Vector-borne Diseases webpage (<http://www.health.state.mn.us/divs/idepc/dtopics/vectorborne/index.html>) or call 651-201-5414.

For information on definitions, sources of information, prevention and other information about these or other reportable diseases, please contact the Acute Disease Epidemiology Section at 651/201-5414.

Sources: Minnesota Department of Public Safety

Severe Injury: Any injury, other than a fatal injury which prevents the injured person from walking, driving, or normally continuing activities which he/she was capable of performing just before the accident

Moderate Injury: Any injury, other than fatal or incapacitating, which is evident to a person other than the injured at the scene of the accident (e.g. bruises, abrasions, swelling, minor lacerations, limping etc.).

Minor Injury: None of the above injuries, but is a complaint of physical pain by the injured (e.g. momentary unconsciousness, nausea, hysteria, etc.)

Source: Minnesota Department of Health, Injury and Violence Prevention Unit
Traumatic Brain Injuries (TBI): numbers are traumatic brain injury events, (vs. people or hospitalizations). Events are nonfatal at time of discharge from the final acute care hospital. Only Minnesota residents are included. Total Minnesota values include events with unknown counties. Minnesota residents who were injured and/or hospitalized out of state and reported to the MDH are also included. All rates are per 100,000 people and were age adjusted to the US 2000 standard population.

Morbidity Tables 9 and 10: TBI and SCI Case Report Definitions

Cases of traumatic brain injury and spinal cord injury must be reported to the Minnesota Department of Health if the patient receives one of the following ICD-9 N-codes (including respective subcoded four or five digit rubrics), either as a principal or secondary diagnosis:

Traumatic Brain Injury (TBI)

310.2 - postconcussion syndrome
348.1 - (when coded with 994.1 or 994.7) - anoxic brain damage
800.0-800.99 - fracture of vault of skull
801.00-801.99 - fracture of base of skull
803.00-803.99 - other and unqualified skull fractures
804.00-804.99 - multiple fractures involving skull or face with other bones
850.0-850.9 - concussion
851.00-851.99 - cerebral laceration and contusion
852.00-852.59 - subarachnoid, subdural, and extradural hemorrhage, following injury
853.00-853.19 - other and unspecified intracranial hemorrhage following injury
854.00-854.19 - intracranial injury of other and unspecified nature
905.0 - late effect of fracture of skull and face bones
907.0- late effect of intracranial injury without mention of skull fracture
950.0-950.9 - injury to optic nerve and pathways
995.55 - shaken infant syndrome

Spinal Cord Injuries (SCI)

806.00-806.9 - fracture of vertebral column with spinal cord injury
907.2* - late effect of spinal cord injury
952.00-952.9 - spinal cord injury without evidence of spinal bone injury

AND

the injury occurred on or after January 1, 1993

AND

the patient: was admitted as an inpatient to an acute care hospital, or died (or declared DOA) in the emergency department prior to admission, or was transferred from the emergency department of an out-of-state hospital.

Out-of-state hospitals are requested to report cases who are Minnesota residents or who were injured in Minnesota.

Does not report patients: seen only in the emergency room and then discharged; or admitted only as outpatients for observation, and then discharged; or admitted directly to long-term care or rehabilitation facilities.

Cases are submitted on the stand case report form or submitted via electronic media.

^See page D-26 for definitions

*Note: In previous County Health Tables, estimated percent of overweight included obesity.

Synthetic Estimates: County level estimated percentages for behavioral risk factors represent the percent of adults considered to be at risk for those behaviors in that county. These estimated percentages were derived through a synthetic estimation method, which adjusts statewide BRFSS percentages by the age and gender distributions of adults in each county.

^See page D-26 for definitions

*estimate of those who perceive their health status to be fair or poor

**in any activities because of any impairment or health problem

Synthetic Estimates: County level estimated percentages for behavioral risk factors represent the percent of adults considered to be at risk for those behaviors in that county. These estimated percentages were derived through a synthetic estimation method, which adjusts statewide BRFSS percentages by the age and gender distributions of adults in each county.

Morbidity Tables 11 and 12:

Definitions for Behavior Risk Factors of Adults

Behavioral Risk Factor Surveillance System (BRFSS): A continuous monthly telephone survey that monitors health risk behaviors that has impact on chronic diseases and disabilities. Approximately, 4800 interviews of adults 18 years and older are completed yearly.

Lack of Seatbelt Usage: Respondent who report the "sometimes," "seldom," or "never use seatbelts.

Hypertension: Respondents who report "they have ever been told by a doctor, nurse, or other health professional they have high blood pressure."

Smoking: Current regular smoker (ever smoked 100 cigarettes and now smokes every day or some days).

Overweight: The prevalence of overweight is defined as a Body Mass Index (BMI) [(weight in kilograms)/(height in meters)²] is greater than or equal to 27.8 for men and greater than or equal to 27.3 for women

Acute Drinking: Respondents who report they have consumed five or more drinks on an occasion, one or more times in the month prior to the survey.

Chronic Drinking: Chronic drinking of adults is defined as the percent of male respondents 18 and older who report an average of more than two drinks per day and female respondents 18 and older who report an average of more than one drink per day.

Drinking and Driving: Respondents who report having driven after having too much to drink, one or more times in the month

Limitation of Activities: The percent of adults who are limited in any activities because of physical mental or emotional problems, OR those adults who have a health impairment that requires the use of special equipment, such as cane, a wheelchair, a special bed or special telephone.

No Exercise: Percent of respondents who reported no physical activities during the past month, other than regular job.

Source: Minnesota Department of Public Safety

A fatality is considered alcohol-related if the investigating officer suspects alcohol-involvement for any driver, pedestrian or bicyclist involved in the fatality. Fatalities are by county of occurrence.

Three year average: The average is determined by adding up all the events that occurred in the three years and then dividing that sum by three

A injury is considered alcohol-related if the investigating officer suspects alcohol-involvement for any driver, pedestrian or bicyclist involved in the injury. Injuries are by county of occurrence.

Three year average: The average is determined by adding up all the events that occurred in the three years and then dividing that sum by three

[^]Includes unknown.

*A rate was not calculated if the number of events was less than 20.

Driving While Impaired (DWI) Violations: The number of drivers who were arrested and found guilty of violating one of the driving while impaired laws. Driving while impaired includes alcohol and other drugs.

Number: The number of driving while DWI violations that occurred **WITHIN** that county/state each year.

Rate: The number of DWI violations per 10,000 population in the county/state.

Notes about the Chemical Health Indicators

IMPAIRED DRIVING INCIDENTS

The category includes alcohol and other drugs that may affect the operation of a motor vehicle. The vast majority of the incidents reported involve alcohol. The violations indicator includes violations for both failing and also refusing to take (implied consent law) a test for blood alcohol content. The driving while impaired indicators include both local law enforcement and State Patrol reports.

Source:

Minnesota Department of Public Safety, 651/201-7000

Limitations:

Under-reporting

Law enforcement officers at a crash or arrest site may not realize and thus not report that alcohol or other drugs were involved.

Lack of Standard Reporting

The number of reports of alcohol-related crashes or driving while impaired violations are affected by the inconsistency of enforcement of the laws by local law enforcement officials. One community may be very strict in enforcement, or receive specific funds for specific enforcement, while another community may be more lenient.

Blood Lead, 1999

Lead poisoning is a significant, preventable environmental health problem among children in the United States. Lead poisoning can cause learning, behavior, and health problems in young children. In adults, lead can cause high blood pressure, kidney damage, and damage to the reproductive organs. Exposure pathways include deteriorating lead paint; soil and dust; drinking water; "take-home lead" by way of parental occupations and hobbies; air; food; and possibly "traditional" medicines.

The Minnesota Department of Health (MDH) maintains an extensive blood lead surveillance system for the purpose of monitoring trends in blood lead levels in Minnesota. Independent laboratories and/or hospitals report blood lead analyses to the MDH. The data are used to help ensure that screening services are provided to high risk groups and that environmental and medical follow-up is provided to children with elevated blood lead levels. Lead program staff advise local health departments of elevated venous blood lead levels that require follow up. Health care providers and public health agencies educate families of children with blood lead levels of 10 micrograms of lead per deciliter of blood (10 µg/dL) or greater about the hazards of lead. Homes of children and pregnant women with venous blood lead levels of 20 µg/dL or greater, or with levels of 15-19 µg/dL that persist for 90 days, are inspected for lead hazards so that homes can be made lead safe and blood lead levels can be reduced.

The results in the table below represent submitted reports of blood lead test of Minnesota children aged 0-72 months between January 1, 1999, and December 31, 1999. Some results of Minnesota patients tested in 1999 may not have been reported to the MDH. The table below shows the numbers of children 0-72 months of age tested in 1999 according to blood lead level, as well as adults with levels of 40 µg/dL or greater.

Foodborne and Waterborne Disease Outbreaks, 1999

Biological organisms that may be present in food and water can cause illness when ingested. The Minnesota Department of Health (MDH) investigates foodborne and waterborne disease outbreaks. Epidemiologists in the Division of Disease Prevention and Control collaborate with sanitarians in the Division of Environmental Health and with local public health agencies in these investigations. Sanitarians conduct necessary inspections and provide data to the MDH epidemiologists, who assess exposures.

A confirmed foodborne disease outbreak is defined as an incident in which two or more persons experience a similar illness, usually gastrointestinal, after eating a common food item, and epidemiologic analysis implicates the food as the source of illness. When a specific food is suspect but data are insufficient for epidemiologic analysis, the outbreak is termed "probable." A waterborne disease outbreak is similar to a foodborne disease outbreak, except that epidemiologic analysis implicates exposure to water or water consumption as the source of illness. Nonfoodborne/nonwaterborne outbreaks are related by time and place of exposure but investigation results do not implicate food or water as the source of the outbreak.

The table below shows the number of confirmed foodborne outbreaks; the number of probable foodborne outbreaks; the number of nonfoodborne/nonwaterborne investigations; and the total number of foodborne and waterborne illness complaints in 1999. There were no confirmed or probable drinking waterborne outbreaks for any Minnesota county in 1999.

Hazardous Substances Emergency Events Surveillance, 1998 and 1999

Hazardous materials are released daily throughout Minnesota as a result of industrial, agricultural, and domestic spills of acids, ammonia, and other chemicals. Many of these releases cause injuries and force evacuations. Injuries range from minor ailments, such as throat irritation, to death.

The Minnesota Department of Health receives reports of hazardous material releases from several sources, including the Minnesota Duty Officer, the United States Coast Guard's National Response Center, and other state agencies. Upon receipt of this initial report, the MDH calls the responsible party a release is called and a standard set of questions is asked including how many and obtains information to complete an extensive report. Information gathered includes the number of people who were evacuated, injured, or decontaminated, the identity of the materials spilled, and how much was spilled. Data on long-term health effects from chemical exposures are not collected. The MDH follow-up procedure has the advantage of providing more complete and accurate information than may have been available at the time of original notification of the release.

The table below compares hazardous material releases in different areas of the state. Data are from the period January 1, 1998 through December 31, 1999.

Environmental Health Table 3: Average Hazardous Material Releases, Injuries, Evacuations, and Chemicals per Event for 1998 and 1999 in Minnesota by State and County*

	Events/County	Injuries/County	Evacuations/County	Average Number
Urban Counties	41.7	10.1	6.8	1.1
Rural Counties	4.6	0.5	0.3	1.1
	Events	Injuries	Evacuations	Chemicals/Event
State of Minnesota	731	128	88	1.1
