## Scope Summary

Project	Minimum Wage Study Workstation Controls Review
Report Version Number	1.0

## **Engagement Summary**

Assessor	Brett DeWall
Test Date	March 24th, 2023
Goals	The engagement focused on assessing Federal Reserve Bank of Minneapolis's Minimum Wage Study (MWS) workstation to identify gaps in the current control environment and ensure full coverage of security requirements.
Limitations	None

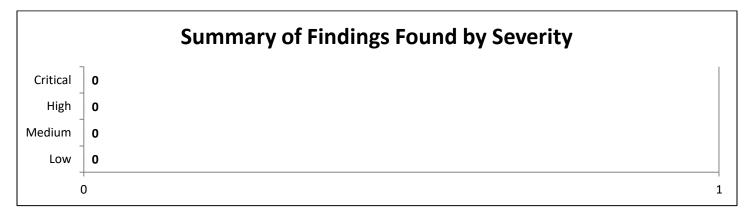

### **Executive Summary**

On March 24th, 2023 Federal Reserve Bank of Minneapolis (FRB MPLS) engaged White Oak Security to perform a Controls Review Assessment of their Minimum Wage Study workstation.

The engagement focused on assessing FRB MPLS's deployment of their Minimum Wage Study workstation along with meeting configuration controls laid out by the state of Minnesota. The goal of this project was to validate each control against FRB MPLS's Minimum Wage Study workstation setup.

During the course of the assessment White Oak Security discovered zero (0) issues. FRB MPLS has properly deployed the Minimum Wage Study workstation in accordance with the state of Minnesota's configuration controls. The following is a summary of the control requirements along with the observation obtained while onsite.

During the engagement, White Oak Security identified zero (0) findings including zero (0) Critical-Risk issues, zero (0) High-Risk issues, zero (0) Medium-Risk issues, and zero (0) Low-Risk issues.

## Findings Table Ratings

The *Business Impact* rating estimates the severity of a potential attack based on information gathered during the security assessment.

#### **Business Impact**

Rating	Description	CVSS Score
Low	Little to no adverse impact, monetary or otherwise.	0.1 – 3.9
Medium	Limited and/or quantifiable financial impact; possible negative media exposure.	4.0 - 6.9
High	Significant financial impact; probable negative media exposure; damage to reputation capital.	7.0 – 8.9
Critical	Immediate significant financial impact; probable negative media exposure; damage to financial reputation capital	9.0 – 10.0

## **Detailed Review Details**

The *Detailed Findings* table describes control names, control details, and the observation observed during the testing. Findings are arranged in order of control standards required for the workstation.

#### **Enterprise Identity and Access Management Standard**

Control Name	Control Detail	White Oak Security Observation
1. Access Control	All access to systems or data must be controlled through the use of identification and authentication mechanisms. This access control must: • Assign privileges to individuals	White Oak Security reviewed user accounts and corresponding job functions and determined all accounts were appropriately provisioned based on job access requirements and least privilege. No control deficiencies noted.
	<ul> <li>based on the individual's job classification and function.</li> <li>Restrict privileges to the least needed for the individual or service</li> </ul>	
	<ul><li>to perform their role.</li><li>Deny all access that is not explicitly granted.</li></ul>	
	<ul> <li>Remove all system access not explicitly required.</li> </ul>	
2. Unique IDs	All users must be assigned a unique ID to access systems or data. IDs must not be reused for at least 10 years.	White Oak Security reviewed user accounts and determined all accounts were assigned unique IDs. No control deficiencies noted.
3. Device, Service, and Application Accounts	Device, service, and application accounts must be assigned to an account owner and must not be used by individuals to access the system.	White Oak Security reviewed all device, service, and application accounts to determine FRB MPLS meets this control requirement. No control deficiencies noted.
4. Access Approval	Requests to create or modify accounts and access privileges must be documented and approved by authorized personnel before access can be granted. Each request for access must define access needs including:	White Oak Security reviewed the access approval process and determined all requests meet the requirements for access. No control deficiencies noted.
	<ul> <li>Systems and data that each user needs to access for their job function.</li> </ul>	
	<ul> <li>Level of privilege required (for example: user administrator, etc.) for accessing resources.</li> </ul>	
5. Account Review	All accounts must be reviewed upon changes in user role and at least annually for user account and every 6 months for privileged accounts and service accounts. The review must validate and recertify that all access privileges are still needed and authorized. The results of the review must be documented and unnecessary access privileges must be communicated to account administrators for removal. Review documentation must be maintained by the account administrator for at least 2 years and made available to central access control team upon request.	White Oak Security reviewed the implemented process for account review and determined that FRB MPLS met the control objective. No control deficiencies noted.
6. Inactive Accounts	Inactive accounts must be disabled after no more than 90 days of inactivity. Disabled accounts must be deleted within 1 year.	White Oak Security reviewed user accounts to determine that no currently implemented accounts need to be disabled. No control deficiencies noted.

7. Revoke Access	Accounts and privileges that are no longer required must be removed or disabled within:	White Oak Security reviewed the implemented process and the recent communication
	<ul> <li>8 hours of notification or identification of voluntary changes in access.</li> </ul>	regarding accounts that have been revoked and determined FRB MPLS meets this control requirement. No control deficiencies noted.
	<ul> <li>1 hour of notification or identification for users that have been involuntarily terminated or for accounts with credentials that may have been lost or compromised.</li> </ul>	
8. Emergency Accounts	Emergency and temporary accounts must be disabled within 24 hours.	White Oak Security discovered no emergency accounts implemented on the system. No control deficiencies noted.
9. Privileged Accounts	Privileged IDs must be:	White Oak Security reviewed the approval
	<ul> <li>Approved by the system owner.</li> </ul>	process and implemented user accounts. No control deficiencies noted.
	<ul> <li>Assigned only to users that specifically require such privileged access.</li> </ul>	
	<ul> <li>Restricted to least privileges necessary to perform administrative responsibilities.</li> </ul>	
	<ul> <li>Granted access to only the system utilities that are needed.</li> </ul>	
	<ul> <li>Authenticated user uses multifactor authentication when accessing systems with data protection categorization of High.</li> </ul>	
	<ul> <li>Prohibited from changing privileges to another user ID either for themselves or another user without authorization.</li> </ul>	
10. Separate Administrative Account	Privileged IDs must only be used when performing authorized administrative tasks. Non-privileged accounts must be used when performing all other tasks.	White Oak Security reviewed implemented user accounts and determined that administrative tasks are performed utilizing only authorized accounts and non-privileged accounts are used for all other tasks. No control deficiencies noted.
11. Segregation of Duties	Access privileges must allow for the appropriate segregation of duties by:	White Oak Security reviewed and witnessed the segregation of duties utilized for accessing
	<ul> <li>Segregating duties of individuals as necessary, to prevent malicious activity without collusion.</li> </ul>	and maintaining the Minimum Wage Study. No control deficiencies noted.
	<ul> <li>Ensuring that audit functions are not performed by personnel responsible for administering access control.</li> </ul>	
	<ul> <li>Maintaining a limited group of administrators (i.e. system administrators, application administrators, security administrators) with access based upon the users' roles and responsibilities.</li> </ul>	
	<ul> <li>Ensure that critical functions and system support functions are divided among separate individuals.</li> </ul>	
	<ul> <li>Ensure that system testing functions and production functions are divided among separate individuals or groups.</li> </ul>	

12. Vendor Access	Accounts used by vendors to access, support or maintain system components via remote access must be:	No vendor accounts have been created for the Minimum Wage Study. No control deficiencies noted.
	<ul> <li>Enabled only during the time period needed.</li> </ul>	
	Disabled when not in use.	
	• Monitored when in use.	
13. Group Accounts	Group, shared, or generic IDs password or authentication methods must be restricted as follows:	No group accounts have been created for the Minimum Wage workstation. FRB MPLS does make use of specific Firecall checkout
	<ul> <li>Generic user IDs must be disabled or removed.</li> </ul>	accounts that do follow all required controls. No control deficiencies noted.
	<ul> <li>Shared user IDs must not exist for system administration and other critical functions.</li> </ul>	
	<ul> <li>Shared and generic user IDs must not be used to administer any system components.</li> </ul>	
	<ul> <li>Passwords and other credentials for group / role accounts must be changed when someone leaves the group / role.</li> </ul>	
14. Authentication	All users and administrators must be authenticated on all systems by using at least one of the following methods:	White Oak Security determined all users utilize passwords to log into the Minimum Wage Study. No control deficiencies noted.
	<ul> <li>Something you know, such as password or passphrase.</li> </ul>	
	<ul> <li>Something you have, such as a token device or smart card.</li> </ul>	
	<ul> <li>Something you are, such as fingerprint.</li> </ul>	
15. User Validation	The user's identity must be properly validated before modifying or communicating any authentication credential – for example, performing password resets, provisioning new tokens or generating new keys.	FRB MPLS's procedures properly validate users before modifications or before any communication of credentials occurs. No control deficiencies noted.
16. First Time Passwords	First-time use and reset passwords / phrases must be:	The first-time password is set to a unique password and is set to expired, requiring to be
	• Set to a unique value for each user.	changed upon first login on the Minimum Wage Study. No control deficiencies noted.
	Changed immediately after the first use.	
17. Password Encryption	All authentication credentials (such as passwords / phrases) must be encrypted during transmission and storage.	White Oak Security determined that all authentication credentials meet the encryption requirements. No control deficiencies noted.
18. Password Length	Passwords must be at least:	White Oak Security determined that all user
5	<ul> <li>8 characters long for user accounts and all mainframe accounts.</li> </ul>	accounts require a minimum of 14-character passwords. No control deficiencies noted.
	<ul> <li>12 characters long for privileged accounts.</li> </ul>	
	<ul> <li>14 characters long for device, service, and application accounts.</li> </ul>	

19. Password Complexity	<ul> <li>Passwords must contain at least: <ul> <li>3 of the 4-character types below for user accounts and all mainframe accounts.</li> <li>4 of the 4-character types below for privileged accounts and device, service, and application accounts.</li> <li>Character Types: <ul> <li>Lower case letters.</li> <li>Upper case letters.</li> <li>Numbers.</li> <li>Special characters.</li> </ul> </li> </ul></li></ul>	White Oak Security determined that all user accounts require password complexity on all passwords. No control deficiencies noted.
20. Minimum Password Age	Passwords / passphrases must be in place for at least 1 day. Mainframe account passwords must be in place for at least 5 days.	White Oak Security determined that all user accounts require a minimum password age of 7 days. No control deficiencies noted.
21. Maximum Password Age	<ul> <li>Passwords / passphrases must be changed at least:</li> <li>Every 90 days for user accounts.</li> <li>Every 60 days for privileged accounts.</li> <li>Every 180 days for device, service, and application accounts.</li> <li>Every 30 days for mainframe accounts.</li> </ul>	White Oak Security determined that all user accounts require a maximum password age of 90 days. The Department of Revenue has provided written approval of this implementation. No control deficiencies noted.
22. Password History	New passwords / phrases must be different from at least the previous 24 passwords / phrases used by that account.	White Oak Security determined that all user accounts require a password history of 24 passwords. No control deficiencies noted.
23. Non-Password Authentication	<ul> <li>Where authentication mechanisms other than passwords are used (for example, physical or logical security tokens, smart cards, certificates, etc.) these mechanisms must be controlled as follows: <ul> <li>Authentication mechanisms must be assigned to an individual account and not shared among multiple accounts.</li> <li>Physical and / or logical controls must be in place to ensure only the intended account can use that mechanism to gain access.</li> <li>A defined registration process must be established for issuing, maintaining and retrieving hardware tokens. When issuing a hardware token must be authorized and verified in person by a designated official.</li> </ul> </li> </ul>	White Oak Security determined that no non- password authentication mechanisms were in use with the Minimum Wage workstation. No control deficiencies noted.
24. Mask Password	All passwords must be masked (i.e., made unreadable) when being entered to prevent unauthorized individuals from viewing the password.	White Oak Security determined that all passwords are masked when being entered into the Minimum Wage workstation. No control deficiencies noted.

25. Account Lockout	User and administrator accounts must be locked out after no more than: • 3 consecutive invalid logon attempts by that user during a 24-hour period	White Oak Security determined that current lockout policy includes 5 invalid logon attempts results in an account being locked out for a duration of 5 minutes. The Department of Revenue has provided written
	for systems with a data protection categorization of High	approval of this implementation. No control
	<ul> <li>5 consecutive invalid logon attempts by that user during a one-hour period for systems with data protection categorization of Moderate</li> </ul>	deficiencies noted.
	<ul> <li>10 consecutive invalid logon attempts by that user during a one- hour period for systems with data protection categorization of Low</li> </ul>	
	The account must remain locked for at least 30 minutes or until unlocked by an administrator.	
26. Inactivity Timeout	Sessions must be automatically locked after 15 minutes of inactivity. The user must be required to re-authenticate to reactivate the session.	White Oak Security determined that the session inactivity timeout is set to 15 minutes. No control deficiencies noted.
27. Multiple Sessions	Systems must prevent multiple concurrent active sessions for individual user accounts. System and application accounts must be limited to the number of concurrent sessions needed for their purpose and as documented in the system security plan.	White Oak Security determined that only one session is allowed at a time on the Minimum Wage Study workstation. No control deficiencies noted.
28. System Use Notification	A warning banner must be displayed prior to granting access to all internal networks, applications, databases, operating systems, workstations, servers, and network devices. Users must explicitly acknowledge the warning banner before being allowed access to the system. The system warning banner must include the following information:	White Oak Security determined the Minimum Wage Study workstation does utilize a warning banner prior to granting access for user account login. No control deficiencies noted.
	• The user is accessing a restricted government information system.	
	<ul> <li>System usage may be monitored, recorded, and subject to audit.</li> </ul>	
	<ul> <li>Unauthorized use of the system is prohibited and may be subject to criminal and / or civil penalties.</li> </ul>	
	• Use of the system indicates consent to monitoring and recording.	
29. Authorized Distribution	Users must ensure State data is only distributed to authorized personnel by:	White Oak Security determined State data is only distributed or allowed to be viewed by authorized personnel. No control deficiencies
	<ul> <li>Only allowing authorized personnel to view content on their screen.</li> </ul>	authorized personnel. No control deficiencies noted.
	<ul> <li>Only including necessary and relevant information in system output such as reports and printouts.</li> </ul>	
	<ul> <li>Only distributing system output to individuals authorized to view all content.</li> </ul>	

30. Database Access	All access to any database containing data with a data protection categorization of High (including access by applications, administrators, and all other users) must be restricted as follows:	White Oak Security determined that no database is installed or in-use on the Minimum Wage Study workstation. No control deficiencies noted.
	<ul> <li>All user access to, user queries of and user actions on databases are through programmatic methods.</li> </ul>	
	<ul> <li>Only database administrators have the ability to directly access or query databases.</li> </ul>	
	<ul> <li>Application IDs for database applications can only be used by the applications (and not by individual users or other non- application processes).</li> </ul>	

Enterprise Security Logging and Monitoring Standard
-----------------------------------------------------

Control Name	Control Detail	White Oak Observation	
31. Logging	Implement automated logging on all systems to reconstruct the following events:	White Oak Security determined the use of Windows events logging, Splunk, and	
	<ul> <li>All actions taken by accounts with root or administrative privileges.</li> </ul>	FileSure for all logging activities on the Minimum Wage Study workstation. No control deficiencies noted.	
	Access to all log data.		
	All log-in attempts.		
	<ul> <li>Use of and changes to identification and authentication mechanisms – including but not limited to creation of new accounts and elevation of privileges – and all changes, addition, or deletions to accounts with root or administrative privileges.</li> </ul>		
	<ul> <li>Initialization, stopping, or pausing of the logs.</li> </ul>		
	Creation and deletion of system- level objects.		
32. Logging Individual User Access	Log all individual user access to data.	White Oak Security determined the use of Windows events logging, Splunk, and FileSure for logging all user activities on the Minimum Wage Study workstation. No control deficiencies noted.	
33. Content of Log Records	<ul> <li>Logged events must contain the following information:</li> <li>User identification.</li> <li>Type of event.</li> <li>Timestamp.</li> <li>Success or failure indication.</li> <li>Origination of event.</li> <li>Identity or name of affected data, system component, or resource.</li> </ul>	White Oak Security determined the content of log files on the Minimum Wage Study workstation met the requirements listed. No control deficiencies noted.	
34. Log Processing Failure	Systems must provide alerts in the event of a log processing failure.	White Oak Security determined that logs are reviewed quarterly and would determine if any processing failures occurred. No control deficiencies noted.	
35. Log Review	<ul> <li>Review the following using automated methods, where technically possible, at least daily: <ul> <li>All security events.</li> <li>Logs of all systems that store, process or transmit data with a data protection categorization of High.</li> <li>Logs of all systems that perform security functions including but not limited to firewalls, intrusion detection systems / intrusion prevent systems, and authentication servers.</li> </ul></li></ul>	All log files are collected quarterly and reviewed extensively of any identified issues. FRB MPLS actively ingests logs through the corporate Splunk configuration. No control deficiencies noted.	
36. Clock Synchronization	Synchronize all system clocks to a designated internal time source that is accurate to the approved authoritative time source.	White Oak Security determined the Minimum Wage Study workstation is not networked and is utilizing the built-in clock. No control deficiencies noted.	

37. Protection of Logs	<ul> <li>Logs must be secured by:</li> <li>Limiting viewing to those with a job-related need.</li> <li>Protecting log files from unauthorized modifications.</li> <li>Encrypting the logs in transit.</li> <li>Requiring log configuration changes to be approved by</li> </ul>	White Oak Security determined that logs are protected within the Minimum Wage Study workstation. No control deficiencies noted.
	authorized security personnel.	
38. Retention of Logs	Retain log data for at least one year, with a minimum of three months immediately available for analysis.	No Federal Tax Information is being logged. Logs will be kept for 3 years by FRB MPLS. No control deficiencies noted.
	Log data for Federal Tax Information (FTI) must be retained for seven years.	
39. Anti-Malware Software	Anti-malware software capable of detecting, removing, and protecting against all known types of malicious software on all systems commonly affected by malicious software and at critical points throughout the network.	White Oak Security reviewed the installed Anti-Malware software and determined it to be working properly and up to date. No control deficiencies noted.
	This software must:	
	Be actively running.	
	<ul> <li>Prevent users from disabling or altering the software.</li> </ul>	
	<ul> <li>Generate event logs and continuously forward to an authorized central log server.</li> </ul>	
	<ul> <li>Automatically check for and install updates at least daily.</li> </ul>	
	<ul> <li>Perform scans of the system at least weekly and real-time scans of files from external sources at endpoint and network entry/exit points as the files are downloaded, opened, or executed.</li> </ul>	
	• Either block or quarantine malicious code and send an alert to the administrator in response to malicious code detection.	
	Be capable of addressing the receipt of false positives.	
	Be centrally managed.	
40. Anti-Malware Review	For systems not commonly affected by malicious software, perform evaluations at least annually to identify and evaluate evolving malware threats in order to confirm whether such systems do not require anti- malware software.	FRB MPLS has implemented anti-malware on the Minimum Wage Study workstation. No control deficiencies noted.

#### Enterprise Physical and Environmental Security Standards

Control Name	Control Detail	White Oak Observation	
41. Labeling	Systems and media must be labeled to indicate the handling and access requirements.	White Oak Security determined the Minimum Wage Study workstation, along with a primary and secondary hard drive have been labeled properly. No control deficiencies noted.	
42. Secure Storage of Paper and Electronic MediaPaper and electronic media containing State data must be kept under the immediate protection and control of an authorized personnel or securely locked up.		White Oak Security determined that FRB MPLS locks all paper media within cabinets while the room is unoccupied. No control deficiencies noted.	

43. Media Inventory	Electronic media containing State data must be inventoried at least annually. Inventories must be documented and any discrepancies with previous inventories must be investigated and communicated to the security incident response team.	FRB MPLS inventories the Minimum Wage Study workstation on a quarterly basis. White Oak Security reviewed the documented inventories. No control deficiencies noted.
44. Media Transport	The transport of any kind of paper or electronic media containing State data must be strictly controlled, including the following:	The media transportation of State data follows multiple strict guidelines within FRB MPLS. All data is encrypted, and proper accountability is
	• Categorize the media based on the data it contains.	performed. No control deficiencies noted.
	• Send the media by secured courier or other secure delivery method that can be accurately tracked.	
	<ul> <li>Monitor the transport to ensure that each shipment is properly and timely received and acknowledged.</li> </ul>	
	<ul> <li>Document the transport of all media.</li> </ul>	
	<ul> <li>Ensure management approves any and all media that is moved from a secured area (including when media is distributed to individuals).</li> </ul>	
	<ul> <li>Restrict the activities associated with the transport of media to authorized personnel.</li> </ul>	
	<ul> <li>Maintain accountability for media during transport outside of secured areas.</li> </ul>	
	All electronic media must be encrypted.	

45. Secure Disposal of Electronic Media	Media must be securely disposed of when it is no longer needed for business or legal reasons and in accordance with record retention requirements as follows:	White Oak Security reviewed FRB MPLS's disposal process and determined it meets all requirements. No control deficiencies noted.
	<ul> <li>Review and approve media to be sanitized to ensure compliance with business, legal, and records retention requirements.</li> </ul>	
	<ul> <li>Sanitize or destroy all media prior to disposal, release out of State control or reuse.</li> </ul>	
	<ul> <li>Ensure the sanitization or destruction is witnessed or carried out by authorized personnel.</li> </ul>	
	<ul> <li>Verify the media sanitization or destruction was successful.</li> </ul>	
	<ul> <li>Document sanitization and destruction actions including:</li> </ul>	
	<ul> <li>Personnel who reviewed and approved sanitization or disposal actions.</li> </ul>	
	<ul> <li>Types of media sanitized.</li> </ul>	
	<ul> <li>Sanitization methods used.</li> </ul>	
	<ul> <li>Date and time of the sanitization actions.</li> </ul>	
	<ul> <li>Personnel who performed the sanitization.</li> </ul>	
	<ul> <li>Verification actions taken.</li> </ul>	
	<ul> <li>Personnel who performed the verification.</li> </ul>	
	<ul> <li>Disposal action taken.</li> </ul>	
	<ul> <li>Provide the business a certificate of destruction confirming disposition of the media.</li> </ul>	

46. Physical Barriers	Areas of the facility containing State systems and data must be physically separated from other areas of the facility by:	Multiple physical barriers are implemented to restrict access to the Minimum Wage Study workstation to very limited individuals at FRB
	<ul> <li>Separating nonpublic areas from public areas with physical barriers (e.g., walls, doors, turnstiles, etc.) and identifying areas as nonpublic with prominent postings.</li> </ul>	MPLS. No control deficiencies noted.
	<ul> <li>Separating sensitive areas such as data centers, network closets, and areas storing or processing data from other areas of the facility using physical barriers.</li> </ul>	
	<ul> <li>Minimizing the number of entrances to nonpublic and sensitive areas.</li> </ul>	
	<ul> <li>Controlling entry and exit points to nonpublic and sensitive areas of the facility using physical access control systems / devices and / or guards.</li> </ul>	
	<ul> <li>Restricting physical access to wireless access points, gateways, handheld devices, networking / communications hardware, and telecommunication lines.</li> </ul>	

47. Physical Access Control	Physical access to nonpublic and sensitive areas must be controlled by:	Physical access to the room housing the Minimum Wage Study workstation is limited to
	<ul> <li>Developing, approving, and maintaining a list of individuals with authorized access to nonpublic an sensitive areas of the facility. This list must include:</li> </ul>	strictly researchers. Other personnel require prior approval and being escorted by
	<ul> <li>Name of individual.</li> </ul>	
	<ul> <li>Agency or department name.</li> </ul>	
	<ul> <li>Name and contact information of agency point of contact.</li> </ul>	
	<ul> <li>Purpose for access.</li> </ul>	
	<ul> <li>Reviewing and updating the access list detailing authorized access by individuals at least every six month for data centers and at least annually for all other areas.</li> </ul>	
	<ul> <li>Authorizing access to nonpublic ar sensitive areas based on the individual's job function.</li> </ul>	d
	<ul> <li>Prohibiting "piggybacking" or "tailgating" into nonpublic or sensitive locations.</li> </ul>	
	<ul> <li>Issuing badge access, keys, and / or combinations only to authorized individuals.</li> </ul>	
	<ul> <li>Revoking access when no longer needed and ensuring all physical access mechanisms, such as keys access cards, etc., are returned, changed, and / or disabled.</li> </ul>	,
	<ul> <li>Requiring the use of two factor of authentication for physical access data centers.</li> </ul>	0
	<ul> <li>Requiring the inspection of all bags and items entering data centers ar limiting access to only those items that are needed to perform work.</li> </ul>	
	<ul> <li>Requiring the completion of required background checks and training prior to granting access to data centers.</li> </ul>	

48. Physical Access Monitoring	Video cameras and / or access control systems (e.g., badge readers, smart cards, biometrics, etc.) must be used to monitor and track all physical access attempts to nonpublic and sensitive areas. Video and / or access control logs must:		Multiple video cameras are implemented to capture initial access to the building and specific areas of the building housing the Minimum Wage Study workstation. The cameras are monitored 24 hours a day by trained personnel.	
	Capture	the following information:	Badge readers are utilized to access all areas	
	0	The owner of the access control device requesting access and / or the identity of the individual requesting access.	of the building. The access logs are reviewed frequently. No control deficiencies noted.	
	0	The success or failure of the request.		
	0	The data and time of the request.		
		wed at least monthly and ad with other entries.		
	reported	rized access must be to the security incident e team for investigation.		
	centers a	or at least 90 days for data and areas containing data a protection categorization		
	days per	tored 24 hours per day, 7 week by trained personnel bond to potential incidents.		
	mechani intrusion	zed by automated sms to recognize potential s and initiate designated e actions.		
49. Physical Access Device Management		s, and other physical ist be protected by:	Physical key to the Minimum Wage Study workstation room is protected within a secure	
	-	eys, combinations, and ysical access devices in a poation.	location with limited access. No control deficiencies noted.	
		ying and reconciling all keys r physical access devices annually.		
	annually who kno no longe	g combinations at least and when an employee ws or has access to them r has a need to access the om, or container.		
	other phy those wh	ng keys, combinations, and ysical access devices to no have a frequent need to cess to the area, room, or r.		

50. Visitor Access	Visitors to nonpublic or sensitive areas must be:		Visitors are not granted individual access to the room or to the Minimum Wage Study
	Authorize	ed before entering.	workstation. Any visitors must have prior approval and be escorted by authorized
		l and monitored at all times npublic or sensitive areas.	individuals to gain access to the Minimum Wage Study workstation room. No control
	issued pl state driv for data d	by examining government hoto identification (e.g., ver's license or passport) centers and areas ng Federal Tax Information.	deficiencies noted.
	• Given a l that:	badge or other identification	
	0	Expires no later than the end of the visit.	
	0	Visibly distinguishes the visitors from authorized personnel.	
	0	Is returned before leaving the facility or at the data of expiration.	
51. Visitor Log	physical audit trail	e used to maintain a of all visitor activity to sitive areas. This visitor log	A visitor log is generated upon entry to the FRB MPLS building. An authorized FRB MPLS escort is with visitors at all times. No control deficiencies noted.
	• Be retain months.	ned for a minimum of 12	
		d out at the end of each nd reviewed by ment.	
	Contain	the following information:	
	0	Name of the visitor.	
	0	Organization of the visitor.	
	0	Signature of the visitor (electronic or physical).	
	0	Form of identification reviewed (if required).	
	0	Date of access.	
	0	Time of entry and departure.	
	0	Purpose of visit.	
	0	Name and organization of authorized escort.	

52. Maintenance Personnel Access	Physical access for cleaning, security, and maintenance personnel must be controlled by:		FRB MPLS requires all maintenance personnel to have prior approval of any
	mainten: personn	ing a list of authorized ance organizations or el. This list must be updated every 6 months and include:	required access to the Minimum Wage Study workstation room. All access granted will be escorted by authorized personnel. No control deficiencies noted.
	0	Name of vendor / contractor.	
	0	Name and phone number of State point of contact authorizing access.	
	o	Name and contact information of vendor point of contact.	
	0	Address of vendor / contractor.	
	0	Purpose and level of access.	
	mainten personn same tra	g that non-escorted ance and cleaning el have completed the aining, screening, and I as authorized employees.	
	required technica the mair personn	ting State personnel with access authorizations and I competence to supervise Itenance activities of el who do not have the access authorizations.	
53. Facilities Maintenance Records	components of a fa security (for examp	ications to the physical acility which are related to ole, door hinges and ors, and locks) must be umented.	Any repairs or modifications are submitted and approved through the proper approval process. All access to the Minimum Wage Study workstation room is monitored and escorted by authorized personnel. No control deficiencies noted.

#### Security Assurance for the Federal Reserve Standards

Control Name	Control Detail	White Oak Observation
54. AC-14 Permitted Actions Without Identification or Authentication	<ul> <li>Identifies specific user actions that can be performed on the information system without identification or authentication consistent with FR missions/business functions</li> </ul>	No access to the Minimum Wage Study workstation room is granted without identification or authentication. No control deficiencies noted.
	<ul> <li>Documents and provides supporting rationale in the security plan for the information system for user actions not requiring identification or authentication</li> </ul>	

55. CA-2 Security Assessments	<ul> <li>The information system owner ensures that:</li> <li>For information security control assessments required by the SAFR Life Cycle, a control assessment plan is developed that describes the scope of the assessment including:</li> </ul>		FRB MPLS finalized the subsystem per the SAFR Life Cycle requirements, including undergoing an independent SAFR assessment and engaging with independent assessors. During the SAFR Life Cycle, the assessment report will be documented and shared with the AO and Research leadership.	
	<ul> <li>Security controls and N control enhancement under assessment</li> </ul>	No control deficiencies noted.

	produce results c • The resu assessn	ty assessment report is d that documents the of the assessment ults of the security control nent are provided to the		
56. CA-5 Plan of Action and Milestones	authoriz The information sy	ing official vstem owner:	FRB MPLS Research works with the IS	
	<ul> <li>Develops a plan of action and milestones for the information system to document the planned remedial actions to correct weaknesses or deficiencies noted during the assessment of the security controls and to reduce or eliminate known vulnerabilities in the system</li> <li>Updates an existing plan of action and milestones based on the findings from security controls assessments, security impact analyses, and continuous monitoring activities</li> </ul>		Compliance and Risk management to monitor and update POAMs. No control deficiencies noted.	
57. CA-7(a) Continuous Monitoring	The information system owner establishes a continuous monitoring strategy and implements a continuous monitoring program that includes:		White Oak Security reviewed FRB MPLS's Continuous Monitoring Procedures. No control deficiencies noted.	
	<ul> <li>Establ monitor</li> </ul>	ishment of metrics to be pred		

58. CA-7(b) Continuous Monitoring	<ul> <li>The information system owner establishes a continuous monitoring strategy and implements a continuous monitoring program that includes:</li> <li>Establishment of required frequencies for monitoring and required frequencies for assessments supporting such monitoring</li> </ul>	FRB MPLS performs quarterly reviews and shares it with the system owner. No control deficiencies noted.
59. CA-7(c) Continuous Monitoring	<ul> <li>The information system owner establishes a continuous monitoring strategy and implements a continuous monitoring program that includes:</li> <li>Ongoing security control assessments in accordance with the organizational continuous monitoring strategy</li> </ul>	FRB MPLS Research implements the continuous monitoring program and works with IS to document metrics in accordance with MN IT Services requirements. FRB MPLS IS Compliance and Risk Management (IS CRM) also reports SAFR policy changes to the SAFR contacts to facilitate the implementation of new or updated SAFR controls. No control deficiencies noted.
60. CA-7(d) Continuous Monitoring	The information system owner establishes a continuous monitoring strategy and implements a continuous monitoring program that includes:     Ongoing security status monitoring of Federal Reserve	White Oak Security reviewed FRB MPLS's Continuous Monitoring Procedures. No control deficiencies noted.
	selected metrics in accordance with the organizational continuous monitoring strategy	
61. CA-7(e) Continuous Monitoring	The information system owner establishes a continuous monitoring strategy and implements a continuous monitoring program that includes:	White Oak Security reviewed FRB MPLS's Continuous Monitoring Procedures. No control deficiencies noted.
	<ul> <li>Correlation and analysis of security-related information generated by assessments and monitoring</li> </ul>	
62. CA-7(f) Continuous Monitoring	The information system owner establishes a continuous monitoring strategy and implements a continuous monitoring program that includes:	White Oak Security reviewed FRB MPLS's Continuous Monitoring Procedures. No control deficiencies noted.
	<ul> <li>Response actions to address results of the analysis of security- related information</li> </ul>	
63. CA-7(g) Continuous Monitoring	The information system owner establishes a continuous monitoring strategy and implements a continuous monitoring program that includes:	White Oak Security reviewed FRB MPLS's Continuous Monitoring Procedures. No control deficiencies noted.
	<ul> <li>Reporting the security status of the Federal Reserve to Information Security governance entities</li> </ul>	
64. CM-2 Baseline Configuration	The information system owner develops, documents, and maintains under configuration control a current baseline configuration of the information system.	FRB MPLS Research collaborated with MPLS IS and IT to evaluate the configuration settings. All settings have been documented, retained, and will be updated should any changes occur. No control deficiencies noted.

AS ON 7 Locat Free diam ality	The information system owner:	FRB MPLS IT configures the system to
65. CM-7 Least Functionality	<ul> <li>The information system owner:</li> <li>Configures the information system to provide only essential capabilities</li> <li>Prohibits or restricts the use of system owner-defined functions, ports, protocols, and/or services</li> </ul>	provide only essential business functions. No unnecessary ports, protocols, or services are configured on the standalone workstation. No control deficiencies noted.
66. RA-3 Risk Assessment	<ul> <li>The Federal Reserve:</li> <li>Conducts an assessment of risk, including the likelihood and magnitude of harm, from the unauthorized access, use, disclosure, disruption, modification, or destruction of the information system and the information it processes, stores, or transmits</li> <li>Documents risk assessment results</li> <li>Reviews risk assessment results</li> <li>Disseminates risk assessment results</li> <li>Updates the risk assessment whenever there are significant changes to the information system or environment of operation (including the identification of new threats and vulnerabilities), or other conditions that may impact the security state of the system.</li> </ul>	FRB MPLS Research consults IS CRM prior to new components or upgrades. All results of the SAFR Life Cycle process are shared with the information system Authorizing Official prior to the approval decision. Additionally, the IS CRM manages the SAFR Life Cycle and presents the risk assessment results prior to requesting approval from AO, AODR, or SO, and ISO. No control deficiencies noted.
67. RA-5(a) Vulnerability Scanning	The Federal Reserve: • Scans for vulnerabilities in the information system and hosted applications. Frequency of the scans will adhere to the requirements for vulnerability assessments and when significant new vulnerabilities potentially affecting information systems are identified and reported	The workstation is standalone and is not subject to network scanning. SEP and Microsoft security patches are manually applied on a quarterly basis. No control deficiencies noted.
68. RA-5(b) Vulnerability Scanning	The Federal Reserve: • Employs vulnerability scanning tools and techniques that facilitate interoperability among tools and automate parts of the vulnerability management process by user standards for: • Enumerating platforms, software flaws, and improper configurations • Formatting checklists and test procedures • Measuring vulnerability impact	The workstation is standalone and is not subject to network scanning. SEP and Microsoft security patches are manually applied on a quarterly basis. No control deficiencies noted.
69. RA-5(c) Vulnerability Scanning	<ul> <li>The Federal Reserve:</li> <li>Analyzes vulnerability scan reports and results from security control assessments.</li> </ul>	On a quarterly basis, MPLS IT extracts the SEP log files and MPLS IS Ops analyzes the data and creates a report that is forwarded to Research. No control deficiencies noted.
70. RA-5(d) Vulnerability Scanning	<ul> <li>The Federal Reserve:</li> <li>Remediates legitimate vulnerabilities in accordance with FR-designated response times</li> </ul>	The Microsoft components are patched on a quarterly basis and any identified software vulnerabilities would follow the NIRT requirements for remediation activities and timing. No control deficiencies noted.

71. RA-5(e) Vulnerability Scanning	The Federal Reserve: • Shares information obtained from the vulnerability scanning process and security control assessments with designated personnel to help eliminate similar vulnerabilities in other information systems (i.e., systemic weaknesses or deficiencies)	SEP logs that may contain identified vulnerabilities or weaknesses would be shared with appropriate IT and Research staff for awareness and remediation. No control deficiencies noted.
72. CM-2 Baseline Configuration	The information system owner develops, documents, and maintains under configuration control a current baseline configuration of the information system.	FRB MPLS Research collaborated with MPLS IS and IT to evaluate the configuration settings. All settings have been documented, retained, and will be updated should any changes occur. No control deficiencies noted.
73. SI-2(a) Flaw Remediation	The information system owner: <ul> <li>Identifies, reports, and corrects information system flaws</li> </ul>	On a quarterly basis, MPLS IT extracts the SEP log files and MPLS IS Ops analyzes the data and creates a report that is forwarded to Research. The Microsoft components are patched on a quarterly basis to address published flaws (remediation). No control deficiencies noted.
74. SI-2(b) Flaw Remediation	<ul> <li>The information system owner:</li> <li>Tests software and firmware updates related to flaw remediation for effectiveness and potential side effects before installation</li> </ul>	FRB MPLS Research performs the quarterly patch kit to other standalone workstations for results identification prior to installation to the Minimum Wage standalone workstation. No control deficiencies noted.
75. SI-2(c) Flaw Remediation	<ul> <li>The information system owner:</li> <li>Installs security-relevant software and firmware updates within defined time period of the release of the updates</li> </ul>	SEP and Microsoft security patches are manually applied on a quarterly basis. HP firmware will be applied on a as needed basis indicated by NIRT alerts. No control deficiencies noted.
76. SI-2(d) Flaw Remediation	The information system owner: <ul> <li>Incorporates flaw remediation into configuration management processes</li> </ul>	The configuration management process is the established quarterly process. No control deficiencies noted.
77. SI-12 Information Handling and Retention	The information system owner handles and retains information within the information system and information output from the system in accordance with applicable laws, policies, standards, and operational requirements.	FRB MPLS retains logs for at least three years. Other data and reports are retained for the length of the project. FRB retains wiping certificates as evidence of media sanitation. No control deficiencies noted.
