Board of Trustees
New Ulm Police Relief Association
New Ulm, Minnesota

Submitted in this report are the results of the December 31, 1986 actuarial valuation of the assets, actuarial values and contribution requirements associated with the benefits provided by the New Ulm Police Relief Association.

The valuation results contained in Section A provide the actuarial information needed to determine the employer's "minimum obligation" effective January 1, 1988. Section A also contains comments regarding the valuation results.

The valuation was based upon information furnished by the Association concerning benefits, financial transactions, active members, terminated members, retirants and beneficiaries. Data was checked for year to year consistency but was not otherwise audited by us. This information is summarized in Section B.

A description of the actuarial funding method and the risk experience assumptions used is contained in Section C. The economic risk experience assumptions, as well as the actuarial funding method to be used, are established by state law.

Information needed to comply with Statement No. 5 of the Governmental Accounting Standards Board is contained in Section D.

The actuarial valuation was prepared using generally accepted actuarial principles and practices based upon the methods, assumptions, summary of plan provisions and the member and financial data described in this report.

Respectfully submitted,

Ronald D. W. Smith

Gary W. Findlay

Section A

Valuation Results

COMMENTS

Economic Assumptions and Financing Method

The economic assumptions of 5% annual investment return and 3-1/2% annual salary increases are established by state law. State law also specifies that the annual minimum obligation of the municipality shall be determined by adding (i) the employer normal cost percent times covered payroll to (ii) the level dollar amount required to amortize the unfunded actuarial accrued liability by December 31, 2010.

It is worth noting that when the same assumptions and methods are applied to plans which differ in nature, the valuation results may not be comparable. Caution should be exercised when attempting to assess the financial condition of one Association relative to another on the basis of valuation results produced using the assumptions and methods mandated by state law.

New Ulm Police Relief Association
 CONTRIBUTION RATE TO PROVIDE BENEFITS
 Member portion & Employer portion
 Effective January 1, 1988

| Contributions for | If Paid Equally Throughout Year Normal Cost % of Active Payroll for 1988 | + | UAAL Dollars |
|--|---|---|--------------|
| Normal cost of annuities: | | | |
| Age & service: to members | 15.65% | | |
| Age & service: to survivors | 5.87 | | |
| Disability | 2.47 | | |
| Death before retirement | 3.48 | | |
| Refunds of member contributions | 0.34 | | |
| Total Normal Cost | 27.81% | | |
| Amortization of unfunded actuarial accrued liabilities (UAAL) (23 year level dollar payment) | | | |
| Retired lives | | | \$ 0 |
| Active members | | | 82,122 |
| Total | | | \$82,122 |
| Total Cost of Benefits | 27.81% | + | \$82,122 |

| COMPUTED EMPLOYER RATE: | | | |
| (a) If Paid Equally Throughout Year | 19.06% | + | \$82,122 |
| (b) IF PAID AT CALENDAR YEAR END | 19.53% | + | \$84,150 |

New Ulm Police Relief Association
 Present Actuarial Condition

The Association's accrued actuarial assets were in excess of \$2.0 million on December 31, 1986 -- a considerable sum of money if unencumbered and allocated among a small group of persons. This is not the case with the Association's assets.

The following schedule puts the \$2.0 million into perspective by showing the relationship between accrued actuarial assets, actuarial accrued liabilities, and the number of persons with actual and potential claims on the Association's assets.

| | <u>Accrued Actuarial Assets</u> | <u>Actuarial Accrued Liabilities</u> | <u>Unfunded Actuarial Accrued Liabilities</u> | <u>% Funded</u> |
|-----------------------------|---|--|---|---------------------|
| Retirants and Beneficiaries | | | | |
| Retired Members (8) | \$ | \$1,355,148 | \$ | |
| Surviving Spouses (1) | | 53,412 | | |
| Surviving Children (0) | | <u>0</u> | | |
| Total (9) | \$1,408,560 | \$1,408,560 | \$ 0 | 100.0% |
| Deferred Members (0) | 0 | 0 | 0 | |
| Active Members (10) | <u>634,142</u> | <u>1,769,325</u> | <u>1,135,183</u> | 35.8 |
| Total | \$2,042,702 | \$3,177,885 | \$1,135,183 | 64.3% |

Actuarial accrued liabilities represent the value, computed as of December 31, 1986 of:

- (i) retirement allowances likely to be paid the 9 retirants and beneficiaries; and
- (ii) the contributions assumed to have been made for the 10 active members from entry into the plan until December 31, 1986.

The value of retirement allowances likely to be paid the 9 retirants and beneficiaries, discounted for investment earnings and mortality, was computed to be \$1,408,560 as of December 31, 1986. To put this amount in perspective, the \$1,408,560, together with investment earnings, will just be sufficient to pay the 9 retirants and beneficiaries their allowances for their remaining lifetimes. This assumes the 9 retirants and beneficiaries live and die according to the assumed mortality and the \$1,408,560 is invested to yield an average annual return of 5.0% over the remaining lifetimes of the retirants and beneficiaries.

With respect to the active members, the actuarial accrued liability of \$1,769,325 represents the amount that would have been accumulated by December 31, 1986. This assumes the normal cost (which is expressed as a level percentage of pay) had been contributed from the date of hire until December 31, 1986 for the 10 actives, and that these amounts had earned 5.0% interest. It also assumes that the members in the past had lived, died, withdrawn, retired and received salary increases according to the actuarial assumptions shown in this report.

Historical Funding Ratio Schedule
(\$ in thousands)

| Valuation Date <u>December 31</u> | Actuarial Accrued <u>Liabilities</u> | Accrued Actuarial <u>Assets</u> | Percent <u>Funded</u> |

New Ulm Police Relief Association
 CONTRIBUTION FOR CALENDAR YEAR EFFECTIVE JANUARY 1, 1988

For any period of time the percent-of-payroll contribution rate is converted to dollars. The amount of dollars for any calendar year depends upon the results of the last actuarial valuation, and the timing of contributions within the year. The later the contribution date, the greater the dollar amount will be.

The municipality's dollar contribution for the year may be determined as follows:

| | | |
|---|--------------|----------|
| (1) Estimated covered payroll for 1988 | | \$ _____ |
| (2) Total normal cost % from page A-2 | | 27.81% |
| (3) Total normal cost (Line 1 times line 2) | | \$ _____ |
| (4) Amortization payment on UAAL from page A-2 | | 82,122 |
| (5) Total contributions required (Line 3 plus line 4) | | _____ |
| (6) Employee contributions (Line 1 times 8%) | | \$ _____ |
| (7) (a) State amortization aid based on 12/31/78 UAAL of \$935,654 | \$14,082 | |
| (b) State amortization aid based on 1984 legislation | <u>2,140</u> | |
| (c) Total State amortization aid | | 16,222 |
| (8) Estimated insurance premium aid | | _____ |
| (9) Estimated total contributions from other sources (Line 6 plus line 7 plus line 8) | | _____ |
| (10) Employer's Minimum Obligation if payment is made in equal installments throughout the year (Line 5 minus line 9) | | \$ _____ |
| (11) EMPLOYER'S MINIMUM OBLIGATION IF PAYMENT IS MADE AT YEAR END (Line 10 times 1.0247) | | \$ _____ |

Valuation Payroll

New Ulm Police Relief Association

Brief Summary (12/31/86) of Benefit Provisions Evaluated and/or Considered

Age & Service Retirement

Eligibility. 20 years of service and 50 years of age.

Amount. 50% of final year's salary with minimum of 40% of salary of highest salaried patrolman. For each of the first 3 years beyond 20 years of service, an additional 1/2% of final year's salary is added to the benefit. (The additional benefit is not subject to the post retirement adjustment provisions.)

Disability Retirement

Eligibility. Disabled to the extent that no longer able to perform the duties of police officer before being eligible for age & service retirement.

Amount. Same as age & service retirement benefit.

Member's Death While Active, Or In Deferred Status, Or Retired

Eligibility.

Spouse. Legally married at time of separation from service. Benefits terminate upon remarriage.

Child. Younger than age 18.

Amount.

Spouse. 40% of salary of highest salaried patrolman.

Child. \$300 per year per child. If no spouse benefit is payable, children receive spouse benefit in lieu of \$300 each per year.

Vested Deferred. 20 years of service and separated before age 50. Payment beginning is deferred to attainment of age 50.

Supplemental Benefit for Retirants. \$80 per month payable from date of retirement to age 65 to a member who retires after 10/15/85.

Post-Retirement Adjustments ("Escalator"). Benefits which are based on a percentage of the prevailing pay of the highest salaried patrolmen are changed at the same time and by the same percent of changes in the salary of active highest salaried patrolmen. (Children's benefits are not escalated unless spouse is not receiving benefits.)

Member Contributions. 8.75% of compensation. Total member contributions are refundable, without interest, if no monthly benefit is payable upon separation from service.

Section C

Valuation Methods and Assumptions

New Ulm Police Relief Association

Valuation Methods and Assumptions

The Entry Age Normal Cost method was used to determine the normal cost of all benefits. The rate of investment return (interest) as required by state law used in making the valuation was 5.0 percent per annum, compounded annually. Age & service retirement was assumed to occur at age 56, or attained age if older.

Mortality Table*

| Sample Ages | Single Life Values: Present Value of \$1 Monthly | | | | Future Life Expectancy (Years) | |
|----------------|---|----------|-------------|----------|-----------------------------------|-------|
| | Level | | Increasing | | Men | Women |
| | For Life | | 3.5% Yearly | | | |
| | Men | Women | Men | Women | | |
| 45 | \$177.21 | \$189.58 | \$280.82 | \$314.75 | 29.50 | 34.00 |
| 50 | 163.12 | 177.21 | 246.55 | 280.82 | 25.20 | 29.50 |

| 55 | 0.89 |

Section D

**The Pension Benefit Obligation
and Certain Other Disclosures
Required by Statement No. 5 of the
Governmental Accounting Standards Board**

PENSION BENEFIT OBLIGATION

The amount shown below as the "pension benefit obligation" is a standardized disclosure measure of the present value of pension benefits, adjusted for the effects of projected salary increases, estimated to be payable in the future as a result of employee service to date. The measure is the actuarial present value of credited projected benefits and is intended to (i) help users assess the plan's funding status on a going-concern basis, (ii) assess progress being made in accumulating sufficient assets to pay benefits when due, and (iii) allow for comparisons among public employee retirement plans. The measure is independent of the actuarial funding method used to determine contributions to the plan.

The pension benefit obligation was determined as part of an actuarial valuation of the plan as of December 31, 1986. Significant actuarial assumptions used in determining the pension benefit obligation include (a) a rate of return on the investment of present and future assets of 5.0% per year compounded annually, (b) projected salary increases of 3.5% per year compounded annually, attributable to inflation, and (c) the assumption that benefits will increase 3.5% per year after retirement.

At December 31, 1986, the unfunded pension benefit obligation was \$1,070,620, determined as follows:

Pension Benefit Obligation:

| | |
|--|------------------|
| Retirees and beneficiaries currently receiving benefits and terminated employees not yet receiving benefits | \$1,408,560 |
| Current employees -- | |
| Accumulated employee contributions including allocated investment income | 216,356 |
| Employer financed | <u>1,476,175</u> |
| Total Pension Benefit Obligation | \$3,101,091 |
| Net assets available for benefits, at cost (market value was \$2,067,163) | <u>2,030,471</u> |
| Unfunded Pension Benefit Obligation | \$1,070,620 |

Appendices

APPENDIX I

FINANCIAL PRINCIPLES AND OPERATIONAL TECHNIQUES

Promises Made, and Eventually Paid. As each year is completed, the plan in effect hands an "IOU" to each member then acquiring a year of service credit -- the "IOU" says: "The Pension Plan owes you a portion of your retirement benefits, payments to be made in cash, commencing when you qualify for retirement."

The related key financial questions are: Which generation of taxpayers contributes the money to cover the IOU? The present taxpayers, who receive the benefit of the member's present year of service? Or the future taxpayers, who happen to be in town paying taxes at the later time when the IOU becomes a cash demand?

A sound principle of sound retirement plan financing is to have this year's taxpayers contribute the money to cover the IOUs being handed out this year. By following this principle, THE CONTRIBUTION RATE WILL REMAIN APPROXIMATELY LEVEL FROM GENERATION TO GENERATION -- our children and grandchildren will contribute the same percents of active payroll we contribute now.

A PENSION PLAN BECOMES CLOSED

The diagram in this appendix shows two important activities which occur after a plan has been closed to employees hired in the future.

Cash benefits paid continue to increase for decades, while active member payroll begins to decrease to zero.

Funding Method. A funding method is the long-term, planned pattern for employer contributions.

For an open plan (a plan covering future employees), the level-percent-of-active-member payroll funding method is the basic funding method.

The level-percent funding method can also be applied to a closed plan. However, the resulting contribution percent usually jumps to a high rate, because the number of covered active members is decreasing.

A preferred funding method for a closed plan consists of: level-percent funding for normal cost (the cost of members' service now being rendered); plus a level dollar contribution for unfunded actuarial accrued liabilities over a limited period of years. The period of years must be limited so that plan assets don't become zero while benefits are still payable.

Computing Contributions To Support Plan Benefits. From a given schedule of benefits and from the employee data and asset data furnished him, the actuary determines the contribution rates to support the benefits by means of an actuarial valuation and a funding method.

In making an actuarial valuation, assumptions must be made regarding anticipated financial experiences for the next year and for decades in the future. Only the subsequent actual experience of the plan can indicate the degree of accuracy of the assumptions.

Reconciling Differences Between Assumed Experience and Actual Experience. Once actual experience has occurred and been observed, it will not coincide exactly with assumed experience, regardless of the wisdom of the assumptions or the skill of the actuary and the millions of calculations he made. The future can be predicted with considerable but not 100% precision, except for inflation which seems to defy reliable prediction.

A well-managed plan copes with these continually changing differences by having periodic actuarial valuations. Each actuarial valuation is a complete recalculation of assumed future experience, taking into account all past differences between assumed and actual experience. The result is continuing adjustment in financial position.

A CLOSED PENSION PLAN

A plan becomes closed when no new hires are admitted to active membership. The persons covered by the plan at the time of closing continue their normal activities and continue to be covered by the plan, until the last survivor dies.

CASH BENEFITS LINE. After a pension plan becomes closed, the usual pattern is for cash benefits to continue to increase for decades of time. Eventually the cash benefits will peak, and then gradually decrease over more decades of time, ultimately to zero. The last cash benefit is likely to occur a century after the time the plan is closed.

The precise amounts of cash benefits cannot be known now, and must be estimated by assumptions of future experiences in a variety of financial risk areas.

APPENDIX II

MEANING OF UNFUNDED ACCRUED LIABILITIES

Almost every pension plan (public or private) has "unfunded accrued liabilities", so whatever they are, they aren't rare. Since the term is not part of everyday conversation, it needs some definition.

"Accrued liabilities" are the present value \$ of plan promises to pay benefits in the future based upon service already rendered - - - a liability has been established ("accrued") because the service has been rendered, but the resulting monthly cash benefit may not be payable until years in the future. Accrued liabilities \$ are the result of complex mathematical calculations, which are made by the plan's actuary (which is the name given to the specialist who makes such calculations).

If "accrued liabilities" at any time exceed the plan's accrued assets (cash & investments), the difference is "unfunded accrued liabilities". This is the common condition. If the plan's assets equalled the plan's "accrued liabilities", the plan would be termed "fully funded". This is a rare condition.

Each time a plan adds a new benefit which applies to service already rendered, an "accrued liability" is created, which is also an "unfunded accrued liability" because the plan can't print instant cash to cover the accrued liability. Payment for such unfunded accrued liabilities is spread over a period of years, commonly in the 20-40 year range.

Unfunded accrued liabilities can occur in another way: If actual financial experience is less favorable than assumed financial experience, the difference is added to unfunded accrued liabilities. In plans where plan benefits are directly related to an employee's pay near time of retirement (a common plan provision) rather than his average pay throughout his working career, unfunded accrued liabilities have been increasing in recent years because unexpected rates of pay increase have created additional accrued liabilities which could not be matched by reasonable investment results. Some of these unexpected pay increases are the direct result of inflation, which is a very destructive force on financial stability.

The existence of unfunded accrued liabilities is not bad, then (any more than a mortgage on your house is "bad"), but the changes from year to year in amount of unfunded accrued liabilities are important - - - "bad" or "good" or somewhere in between.

Nor are unfunded accrued liabilities a bill payable immediately (your food costs are payable immediately), but it is important that policy-makers prevent the amount from becoming unreasonably high and it is vital that your plan have a sound method for making payments toward them so that they are controlled.

The existence of large amounts of unfunded accrued liabilities indicates that total contributions in past years were less than level - - - an almost certain history if retired life liabilities are not fully funded now.
