

American Indians, Indian Tribes, and State Government

About this Publication

This guidebook discusses major issues involved in the relationship between American Indian Tribes, American Indians, and state government, including criminal and civil jurisdiction, employment, control of natural resources, gaming and liquor regulation, taxation, health and human services, child welfare, education, labor, and civic engagement.

February 2023

Contributors

American Indians, Indian Tribes, and State Government is a cooperative project by legislative analysts in the Research Department of the Minnesota House of Representatives. This publication introduces Minnesota legislators to the major legal issues involved in the relationship between American Indians, Indian Tribes, and state government.

This report was coordinated by Mary Davis, a legislative analyst specializing in the areas of American Indian Tribal government and Indian law. General questions regarding the guide can be directed to Mary Davis, 651-296-9253. Topical questions should be addressed to the analyst who covers that subject.

Overview

This publication introduces Minnesota legislators to the major legal issues involved in the relationship between American Indian Tribes, American Indians, and state government. It is not intended to be a comprehensive or in-depth treatment of the subject. (Please see “A Note on Terminology” on the following page on the use of terms, including American Indian and American Indian Tribes.)

The publication begins with some basic data on American Indians in Minnesota today. Map 1 shows the locations of Tribal reservations. Map 2, Figure 1, and Appendix I present population information from the Census Bureau’s American Community Survey five-year estimates for 2017 to 2021. Appendix II presents demographic and other information for each reservation in Minnesota.

Part One defines terms and explains concepts that are necessary for understanding the basic nature of state and federal power relative to American Indians and Indian Tribes.

Part Two contains a series of papers on specific legal issues relevant to policymakers. The topics are:

- Criminal Jurisdiction in Indian Country
- Civil Jurisdiction in Indian Country
- Labor and Employment Law in Indian Country
- Gaming Regulation in Indian Country
- Liquor Regulation in Indian Country
- Control of Natural Resources in Indian Country
- Environmental Regulation in Indian Country
- Taxation in Indian Country
- Health and Human Services for American Indians and Tribes
- Indian Child Welfare Laws
- Education Laws Affecting American Indian Students
- Postsecondary Education Laws Affecting Indian Students
- Elections, Voting Rights, and Civic Engagement

Appendix III explains the ability of the U.S. Bureau of Indian Affairs to acquire land in trust for Tribes.

Appendix IV lists the 11 Tribal courts in Minnesota and the court and court of appeals for the Minnesota Chippewa Tribe. The Minnesota Chippewa Tribe is a federally recognized Tribal government that provides unified leadership and services to the six member Tribes: Bois Forte, Fond du Lac, Grand Portage, Leech Lake, Mille Lacs, and White Earth.

A Note on Terminology

The term “Indian” was given to the Indigenous people of North America by the European explorers when they first encountered the New World, mistakenly thinking they had reached the Indies. Individuals have different preferences for the term used to describe Indigenous people in the United States, including American Indian, Native American, or by the names they call themselves in their own languages. The main groups of Indigenous people still residing in Minnesota are the Dakota and the Chippewa, also referred to as Ojibwe or Anishinaabe. This publication uses the term “American Indian” to collectively refer to Indigenous people of North America and Minnesota. This publication also follows the convention used in nearly all federal and state laws, referring collectively to all the Indigenous people of North America and Minnesota as “Indians” when describing statutory or legal identification. In certain instances the term “American Indian” in conjunction with Alaskan Natives is used as that is the term used in some state laws and the U.S. Census for Indigenous people to identify themselves.

American Indians in Minnesota

Population of American Indians in Minnesota

Minnesota has 11 federally recognized Indian reservations and an additional Tribal government, the Minnesota Chippewa Tribe, which is a federally recognized Tribal government for six member Tribes: Bois Forte, Fond du Lac, Grand Portage, Leech Lake, Mille Lacs, and White Earth.

Anishinaabe Bands (Chippewa/Ojibwe)

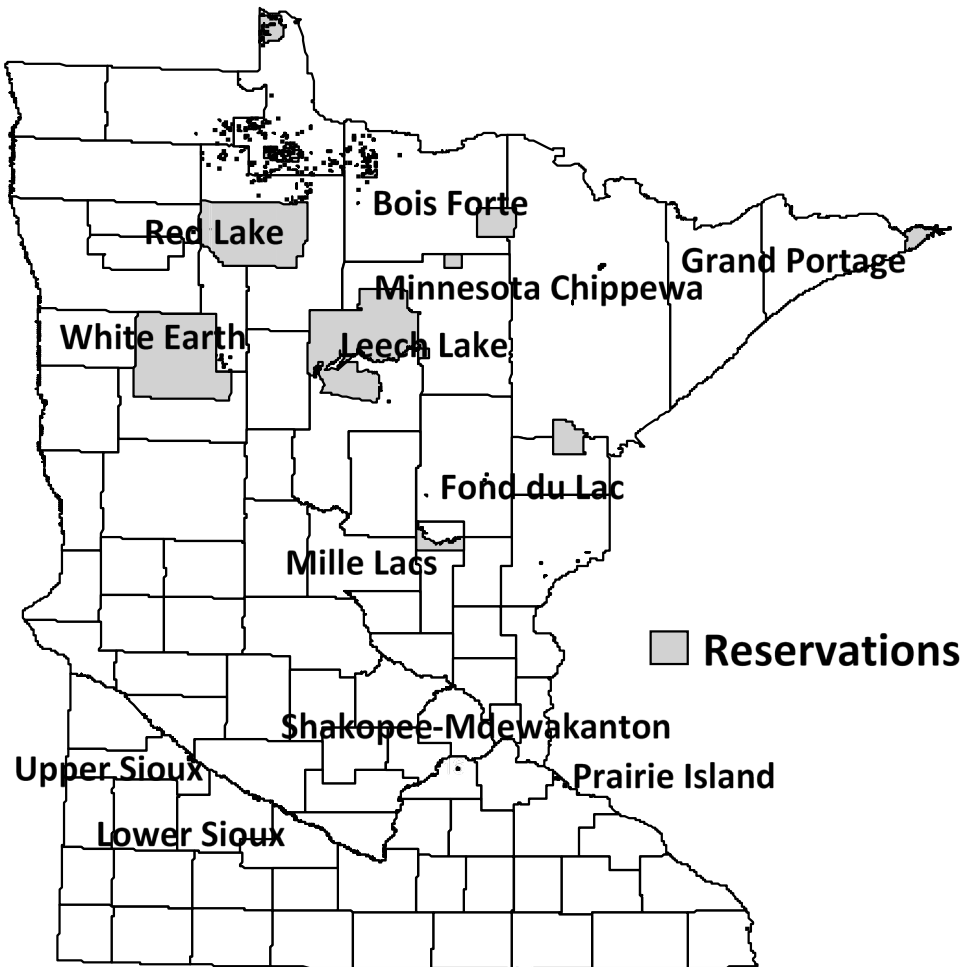

- Bois Forte (Nett Lake)
- Fond du Lac
- Grand Portage
- Leech Lake
- Mille Lacs
- Red Lake
- White Earth

Dakota Communities¹

- Lower Sioux
- Prairie Island
- Shakopee-Mdewakanton
- Upper Sioux

Map 1 shows the location of these reservations.

Map 1: Minnesota Indian Reservations

This map shows the approximate location of 12 federally recognized Tribes in Minnesota, including the location of the Minnesota Chippewa Tribe government offices.

The Census Bureau’s American Community Survey estimated there were 114,778 individuals in Minnesota identifying as “American Indian and Alaska Native persons”² in part or in combination with another race in 2017 to 2021. These individuals represented approximately 2.0 percent of the state’s population.

⁴ There are 574 federally recognized American Indian Tribes, and nearly 200 tribes that are unrecognized. Any of them may identify as American Indian for the U.S. Census.

Part One: Terms and Concepts

Definition of “Indian Tribe”

Legal recognition under federal and state law provides Tribes and the members of those Tribes certain benefits and services. Legal recognition has come from congressional or executive action that, for example, created a reservation for the Tribe, negotiated a treaty with the Tribe, or established a political relationship with the Tribe, such as providing services through the Bureau of Indian Affairs (BIA). State-recognized Tribes and federally recognized Tribes can have district legal rights as well.¹

As with the definition of “Indian,” the legal status of Tribes is distinguished from ethnological definitions.

Federal recognition of Tribes does not necessarily follow ethnological divisions. For example, the federal government has combined separate ethnological Tribes into one “legal” Tribe or divided one ethnological Tribe into separate legal Tribes. It is important to note that some American Indians dispute the way the federal government has recognized their Tribes, or are still fighting to have their Tribes be recognized by the federal government.

In general, the Indian Commerce Clause of the U.S. Constitution authorizes Congress² to determine which groups of American Indians will have legally recognized Tribal status.

Federal statutes before 1934 rarely defined the term “Indian tribe.” The recent congressional trend is to define the term “tribe” in particular statutes. Enrolled membership in a Tribe is considered a political status, not a racial or ethnic determination.³

The courts generally will not question congressional or executive action in recognizing a Tribe. Courts, however, will order the executive to honor Tribal status for a particular purpose where it has been judged to have been the intent of Congress.⁴ Courts will also not allow the federal government to confer Tribal status arbitrarily on a group that has never displayed the characteristics of a distinctly American Indian community.⁵

Department of the Interior regulations provide an administrative procedure for Tribes seeking recognition.⁶ This rule was substantially revised in 2015. The revision increased public access to the process, making petitions for recognition public and providing notice of applications to local governments. The revision also provides an expedited rejection process, clarification on the documentation needed to meet the criteria, an administrative hearing on the proposed findings, and for judicial review of the assistant secretary’s final decision. The revised rule does not allow a proposed Tribe to reapply. The Department of the Interior has also indicated it will only allow Tribes to be recognized consistent with the process in Code of Federal Regulations, title 25, section 83.⁷

Petitioners must be acknowledged as a Tribe if they meet all of the following criteria:

- a) The petitioner has been identified as an American Indian entity on a substantially continuous basis since 1900

- b) A predominant portion of the petitioning group comprises a distinct community and has existed as a community from 1900 until the present
- c) The petitioner has maintained political influence or authority over its members as an autonomous entity from 1900 until the present
- d) The group must provide a copy of its present governing documents and membership criteria
- e) The petitioner's membership consists of individuals who descend from a historical American Indian Tribe or Tribes, which combined and functioned as a single, autonomous political entity
- f) The membership of the petitioning group is composed principally of persons who are not members of any acknowledged North American Indian Tribe
- g) Neither the petitioner nor its members are the subject of congressional legislation that has expressly terminated or forbidden recognition⁸

Congress can also terminate federal supervision of a Tribe.

When Congress terminates a Tribe's federal status, this eliminates the Tribe's special relationship with the federal government. The terminated Tribe retains its sovereignty to the extent consistent with the act terminating its status. No recognized Tribes in Minnesota have been terminated.

Federal recognition provides certain benefits to American Indian Tribes.

The federal trust responsibility for American Indian land and many of the federal services and benefits are gained through federal recognition of an American Indian Tribe, and the termination of federal status generally removes many benefits and protection to Tribes. The BIA identifies 574 federally recognized American Indian and Alaska Native Tribes and villages.⁹ Some Tribes can receive benefits as a state-recognized Tribe or nonprofit, and some federal programs provide benefits to individual American Indians, the definition of which changes depending on the program and statute.¹⁰

In September 2016, the Department of the Interior approved a rule that would allow Native Hawaiians to establish formal government-to-government relations with the federal government.¹¹

Tribal Sovereignty: Limits on State Power

American Indian Tribes have a special legal status derived from their status as sovereign nations under the U.S. Constitution and federal law. When the United States was founded, the Tribes were self-governing, sovereign nations. Their powers of self-government and sovereign status were not fully extinguished. While the establishment of the United States subjected the Tribes to federal power, it did not eliminate their internal sovereignty or subordinate them to the power of state governments.¹ The U.S. Supreme Court has ruled that Tribes lost their “external sovereignty,” that is, they were no longer able to deal with foreign nations. However, they still retain their sovereignty within their Tribal territories.² The Tribes retain the powers of self-government over their lands and members.

An important tenet of federal policy has been to protect the self-government rights and sovereignty of Tribes.

Chief Justice Marshall characterized the federal-Tribal relationship as one of “domestic dependent nations” to whom the federal government had essentially a fiduciary relationship.³ One element of this fiduciary relationship has been to preserve Tribes’ status as self-governing entities within their territories, including protection from state interference.⁴ For example, Chief Justice Marshall described the situation as follows:

The Cherokee nation * * * is a distinct community * * * in which the laws of Georgia can have no force * * * but with the assent of the Cherokees themselves, or in conformity with treaties, and with the acts of Congress.⁵

As Congress has inconsistently accorded importance to sovereignty and Tribal self-government, federal Indian affairs policy has varied significantly over the years. Assimilation policies at times downplayed the importance of Tribal sovereignty. However, Tribal sovereignty has been, and continues to be, an important theme of federal policy.

Under the Indian Commerce Clause, Congress has plenary authority over Indian affairs and Tribes.

The Constitution gives Congress authority over American Indian Tribes, including the powers to repeal treaties, eliminate reservations, and grant states jurisdiction over particular Tribes. The role of the Indian Commerce Clause and the scope of federal powers is widely debated and often litigated.⁶

Tribal sovereignty and Tribes’ right of self-government are the important touchstones that affect Tribal relations with state government.

The U.S. Supreme Court has stated variously that American Indian relations are the exclusive concern of Congress⁷ but also found that states’ rights do not end at the border of a reservation.⁸ In any case, state power over Tribal territory is limited to those powers that

immunity of foreign nations and states. It has been observed by both courts and commentators that applications of the sovereign immunity of tribes would not similarly extend to states. See, e.g., *In re Greene*, 980 F.2d 590, 598-600 (9th Cir. 1992), cert. denied *Richardson v. Mount Adams Furniture*, 510 U.S. 1039 (1994) (Rymer, J., concurring); Thomas McLish, Note, *Tribal Sovereign Immunity: Searching for Sensible Limits*, 88 Colum. L. Rev. 173, 179-80 (1988).

¹² See *Cohen's*, 7.05[1][a], at 638-639. See also *Young v. Duenas*, 272 P.3d 8513 (2012), cert. denied *Young v. Fitzpatrick*, Docket No. 11-1485 (2013). The circuit court found that law enforcement authorities acted within the scope of authority of the tribe and were protected by sovereign immunity even where they were trained and cross deputized with state and other law enforcement; *Michigan v. Bay Mills Indian Community*, 134 S. Ct. 2024 (2014), Tribal officials may be responsible for illegal conduct.

¹³ *Kiowa Tribe*, supra note 11, 523 U.S. at 756.

¹⁴ *Id.*, 523 U.S. at 759; upheld by *Michigan v. Bay Mills Indian Community*, 134 S. Ct. 2024 (2014), when the Supreme Court refused to overturn the *Kiowa* decision and ruled that it is “fundamentally Congress’s job to determine whether or how to limit Tribal immunity.”

Public Law 280

In 1953, Congress enacted a law, commonly referred to as Public Law 280, which created criminal and adjudicatory civil jurisdiction in certain states over acts committed in Indian country. Although the scope of Public Law 280 has since been narrowed by congressional amendment and case law, its enactment remains a major event in the evolution of federal policy regarding American Indian Tribes and their relationship with state governments, particularly in Minnesota.

The federal law, as originally enacted, granted to the states of Wisconsin, Oregon, California, Minnesota, and Nebraska criminal and civil jurisdiction over individual American Indians in most Indian lands¹ located within state boundaries.

Under a 1958 amendment, Alaska was granted similar criminal and civil jurisdiction. In addition, Public Law 280 originally contained a mechanism under which certain other states could choose to assert full or partial civil or criminal jurisdiction over American Indian lands without the consent of the affected American Indians or their Tribes. This mechanism was changed in 1968 when Congress amended the law prospectively to prohibit additional states from asserting jurisdiction over American Indians without their consent. The 1968 amendments also permitted states to “retrocede” or grant back jurisdiction acquired under Public Law 280 to an Indian Tribe; however, retrocession had to be initiated by the state and approved by the federal government.² Public Law 280 has been considered controversial both by the affected states and Tribes. Tribes felt that Tribal sovereignty required their approval of the grant of jurisdiction to states and states felt that the requirement that they assume jurisdiction was unfair given the federal government provided no funding to the states.

Public Law 280 provided that certain aspects of civil jurisdiction are not provided to states and subsequent case law has further specified which areas are excluded from the state’s jurisdiction.

Public Law 280 grants civil jurisdiction over individual American Indians, not Tribes, and allows civil causes of action between American Indians that arise in Indian country to be tried in state courts.³ Additionally, Public Law 280’s grant of civil jurisdiction applies only to state laws of “general application.” This means that a law of local or limited application, such as a zoning ordinance, may not be applied to Indian country under Public Law 280. Not all property rights are covered by Public Law 280’s grant of criminal or civil jurisdiction. For example, the law does not affect trust or restricted real or personal property, including water rights. Moreover, Public Law 280 does not affect the supremacy of the federal-Tribe relationship with regard to treaties, agreements, or federal statutes. Some of the important rights preserved by the law are preexisting Tribal rights with respect to hunting, trapping, and fishing.

The scope of jurisdiction granted by Public Law 280 has been limited by several Supreme Court decisions. First, in *Bryan v. Itasca County*,⁴ the Court ruled that states could not tax an

Special Rules for Interpreting Indian Law

The Supreme Court, in a series of decisions dating from the early 19th century, has held that the federal government has a special trust responsibility with American Indian Tribes.¹ These trust principles have developed in several ways. One important result is that the Court has developed a special set of rules or “**canons of construction**” for construing treaties, statutes, and executive orders affecting American Indian Tribes and peoples. These rules of construction or interpretation are important in shaping the development of the law and, in particular, in establishing and protecting the rights of the Tribes and their members.

The canons of construction initially grew out of rules for construing treaties with Tribes.

They represent, in part, an acknowledgment of the unequal bargaining positions of the federal government and the Tribes in negotiating these treaties. More importantly, the canons reflect the view, arising from the fundamental trust relationship, that the actions of Congress are presumed to be for the benefit and protection of the Tribes and Indian peoples. Therefore, the canons assume that Congress—absent a “clear purpose” or an “explicit statement”—intended to preserve or maintain the Tribal rights.²

The canons are expressed in various ways.

In general, they provide that treaties, statutes, executive orders, and agreements are to be construed liberally in favor of establishing or protecting Indian rights and that ambiguities are to be resolved in favor of American Indians.³ For example, unless Congress clearly indicated, or an agreement or treaty specifically stated otherwise, it is presumed that Tribal hunting, fishing, and water rights are retained.⁴ As another example, it is presumed that Congress did not intend to abrogate Tribal tax immunities, unless it “manifested a clear purpose” to do so.⁵ Another formulation is that treaties are to be construed as Indians understood them.⁶

Recent U.S. Supreme Court cases vary their application of the canons.

Although the canons of construction have long been a key element of Indian law,⁷ in some cases the Supreme Court has retreated from using the canons to protect the interests of Indians.⁸ The Supreme Court stated in *Chickasaw Nation v. the United States*, that canons are not mandatory rules and that canons favoring Tribes may be offset by canons promoting other values.⁹ Cases such as these suggest some movement away from the strict adherence to the canons as a cornerstone of the Indian law protection for Indian interests. However, more recent cases such as *Washington State v. Cougar Den* and *McGirt v. Oklahoma*, show a trend toward upholding the traditional canons of construction.¹⁰

State Criminal Jurisdiction

Non-Indian offenses. As mentioned earlier, the Supreme Court ruled in a series of cases beginning in the late 19th century that all states have criminal jurisdiction over crimes committed on Indian lands where both the perpetrator and the victim are non-Indians.¹⁵ The Court reached this conclusion based on two primary factors. First, it reasoned that states have inherent power over Indian lands within their borders as a consequence of their admission into the union without an express disclaimer of jurisdiction. Second, it determined that the laws addressing the jurisdiction of the federal government address the treatment of American Indians, not the treatment of non-Indians, for conduct that happened to take place on Indian lands.

authority of California to enforce certain gambling laws in Indian country. The Supreme Court ruled that the state could not do so because these gambling laws were regulatory in nature, not criminal. In its decision, the Court outlined the following test for determining whether a law was criminal/prohibitory or civil/regulatory:

[I]f the intent of a state law is generally to prohibit certain conduct, it falls within Pub. L. 280's grant of criminal jurisdiction, but if the state law generally permits the conduct at issue, subject to regulation, it must be classified as civil/regulatory and Pub. L. 280 does not authorize its enforcement on an Indian reservation. The shorthand test is whether the conduct at issue violates the State's public policy.²⁴

Thus, Public Law 280's grant of criminal jurisdiction over Indian land to states like Minnesota is limited to conduct that violates the general criminal laws of the state and does not include laws that merely regulate conduct, even if violations of such regulatory laws are subject to criminal penalties.²⁵

In December 1997, the Minnesota Supreme Court articulated a two-step test for applying the *Cabazon* test to determine whether a particular Minnesota law is civil/regulatory or criminal/prohibitory.²⁶

Step one. The first step of this state test relates to the question of whether the scope of the conduct at issue is to be defined broadly (e.g., driving) or narrowly (e.g., drinking and driving). The answer to this question is important because it often will determine whether the conduct generally is prohibited by state law or is merely regulated by it. The Minnesota Supreme Court stated that the reviewing court must focus on the broad conduct unless the narrow conduct presents substantially different or heightened public policy concerns. If the latter is the case, then the court must focus on the narrow conduct.

Step two. The second step of the state test applies the *Cabazon* test to the conduct at issue, as it is defined under step one. This step requires the reviewing court to decide whether state law generally permits the conduct or not; that is, whether the conduct violates the state's public criminal policy. If the answer to this question is clearly yes, meaning that state law generally permits the conduct, then the law is civil/regulatory. If the answer is clearly no, the law is criminal/prohibitory. If the answer is unclear, the court must look to the following factors in deciding the issue:

- The extent to which the activity directly threatens physical harm to persons or property, or invades the rights of others
- The extent to which the law allows for exceptions and exemptions
- The blameworthiness of the actor
- The nature and severity of the potential penalties for a violation of the law²⁷

Using this test, the Minnesota Supreme Court ruled that the state law prohibiting the consumption of alcohol by individuals under the age of 21 is criminal/prohibitory and, therefore, the state has jurisdiction to enforce it on Indian land.²⁸ The Minnesota Supreme

Court also indicated, in *dicta*, that the laws prohibiting drunk driving and careless or reckless driving are likewise criminal/prohibitory.²⁹

In contrast, the Minnesota Supreme Court also used its two-part test to rule that the state lacks jurisdiction to enforce many traffic-related violations against Indians on Indian land.³⁰

The following table highlights criminal and civil offenses as deemed by Minnesota courts.

Criminal/Prohibitory	Civil/Regulatory
<ul style="list-style-type: none"> ▪ Marijuana possession³¹ ▪ Obstruction of legal process³² ▪ Driving after cancellation as inimical to public safety (cancelled due to multiple DWI offenses)³³ ▪ Driving after revocation (revoked because of DWI)³⁴ ▪ Fifth-degree assault³⁵ ▪ Disorderly conduct³⁶ ▪ Underage drinking³⁷ ▪ Predatory offender registration³⁸ 	<ul style="list-style-type: none"> ▪ Driving after suspension (suspended for failure to pay child support)³⁹ ▪ No proof of insurance/No insurance⁴⁰ ▪ Driving after revocation (revoked for failure to provide proof of insurance)⁴¹ ▪ Expired registration⁴² ▪ No driver’s license/Expired driver’s license⁴³ ▪ Speeding (petty misdemeanor)⁴⁴ ▪ Failure to wear seatbelt⁴⁵ ▪ No child restraint seat⁴⁶ ▪ Failure to yield to an emergency vehicle⁴⁷

Civil commitment of American Indian sex offenders. The Minnesota Supreme Court has ruled that American Indians can be civilly committed as sexually dangerous persons under state statute.⁴⁸ The court’s ruling in *In re Johnson* would appear to violate Public Law 280 because Minnesota courts have consistently ruled that civil commitment is a civil, and not a criminal, matter.⁴⁹ However, the court relied on a provision in Public Law 280 that grants states “jurisdiction over civil causes of action between Indians or to which Indians are parties which arise in the areas of Indian country...” Under this provision, “civil laws that are of general application to private persons...shall have the same force and effect within such Indian country as they have elsewhere within the State.” Relying on this language, the court concluded that the state’s sex offender civil commitment law creates “civil causes of action” that are subject to Public Law 280’s express grant of civil jurisdiction to the state.

Tribal Jurisdiction

Tribes retain concurrent criminal jurisdiction. The Tribe retains jurisdiction over any crime not covered under the Major Crimes Act or through Public Law 280. There are a number of exceptions to this depending on whether or not the perpetrator and the victim are members of the Tribe or nonmember Indians. If an Indian band has a criminal code of its own and its provisions do not overlap the state or federal criminal code, the band may enforce that code against Tribal members on lands over which the band has jurisdiction. The perpetrator need not be a member of the Tribe that is asserting jurisdiction; as long as both the parties are

- ⁵⁰ Congress has affirmed Tribal authority over crimes committed against Indians by nonmember Indians. Congress did so in response to the Supreme Court’s ruling in *Duro v. Reina*, 495 U.S. 676 (1990), that tribes lack the power to prosecute such cases. Pursuant to its plenary power over the Indian tribes under the Constitution, Congress amended the Indian Civil Rights Act to affirm the inherent right of tribes to assert criminal jurisdiction over this and other types of intra-Indian offenses. the Indian Child Welfare Act in 1978 because the act gave Tribal courts jurisdiction over disputes involving Indian children both within and outside Indian country.

However, the Minnesota Chippewa Tribe was not able to develop its own courts until 1994. Before that time, the Department of the Interior took the position that the Tribal constitution did not allow the bands to create their own courts. The 12 Tribal courts in Minnesota are listed in Appendix IV.

Tribal courts blend traditional Tribal dispute resolution approaches with many due process elements taken from the federal Constitution. Although the Supreme Court has held that the Bill of Rights and the 14th Amendment do not apply to Tribal powers of local self-government,⁸ the federal Indian Civil Rights Act of 1968⁹ requires Tribes to include various due process provisions. In addition, as Tribal operations have greater impact on non-Indians, Tribal courts have adopted more elements of American due process in part so that their decisions will be recognized by state and federal court systems.

There is extensive case law on whether a Tribal court or state court has jurisdiction over particular cases.

The Supreme Court has explained that Tribal courts are not courts of general jurisdiction because Tribal court authority does not exceed a Tribe's legislative authority.¹⁰ A Tribe's inherent power does not exceed what is needed to protect self-government or to control internal relations. Thus, "Indian tribes retain their inherent power [to punish Tribal offenders,] to determine Tribal membership, to regulate domestic relations among members, and to prescribe rules of inheritance for members..."¹¹ Tribal courts also have "considerable control over nonmember conduct on Tribal land."¹² However, Tribal land ownership alone is not enough to support jurisdiction over nonmembers when a considerable off-reservation state interest is balanced against a minimal interference with Tribal self-government.¹³

Unless a treaty, federal statute, or administrative decision provides otherwise, Indian Tribes and Tribal courts have only limited authority over activities of nontribal members on non-Indian fee lands within Indian country.¹⁴ In *Montana v. United States*, the Supreme Court recognized exceptions that give a Tribal court sole jurisdiction in such a dispute if it involves (1) non-Indians in "consensual relationships with [a] Tribe or its members through commercial dealing, contracts, leases, or other arrangements,"¹⁵ or (2) "conduct that threatens or has some direct effect on the political integrity, the economic security, or the health or welfare of the Tribe."¹⁶ The Supreme Court has upheld the *Montana* exceptions, and recently affirmed that non-Indians who enter consensual relationships with Indian Tribes can be subject to the civil jurisdiction of the reservation's courts.¹⁷

State court jurisdiction must be available to an American Indian to invoke against a non-Indian, even if the dispute arises in Indian country.¹⁸ State courts may take jurisdiction of civil actions arising in Indian country and involving only Tribal members if there is no Tribal court,¹⁹ if the Tribal court lacks jurisdiction of the subject matter under its Tribal law,²⁰ or if an Indian party is found to have voluntarily submitted to state court jurisdiction by filing a petition there.²¹ If the state court has concurrent jurisdiction with a Tribal court over a dispute, the state court may

decide to hear the case if a combination of factors are present²² or may decline jurisdiction for public policy reasons.²³

Many states are addressing the issue of full faith and credit for Tribal court and state court decisions.

The full faith and credit clause of the federal Constitution requires each state to recognize the acts, records, and judicial proceedings of other states.²⁴ The clause is necessary to allow a federal system to function, so that litigation does not go on endlessly. It does not apply to Tribal courts either by its express terms or by case law or federal legislation. However, the concept has become an issue for state court systems as Tribal courts have been established around the country. Since Tribal courts have increased in sophistication and are handling larger numbers of cases, many state court systems want to formalize their relationships. States have varied in whether the legislative or judicial branch has taken the lead in addressing the matter.

State statutes vary in how they give effect to Tribal court decisions. Some statutes grant full faith and credit to all Tribal court judgments,²⁵ some to only judgments in certain kinds of cases,²⁶ and some statutes only grant full faith and credit to Tribal court judgments where specified conditions are met.²⁷

Some state courts have ruled that giving full faith and credit to Tribal court decisions is within the court's inherent judicial authority under the doctrine of comity.²⁸ Comity is a judicial concept that grows out of the respect one court has for another court's authority and jurisdiction. It also seeks to promote efficiency by preventing multiple proceedings on the same matter. Finally, the most common way states have dealt with full faith and credit for Tribal court decisions is by court rule. For example, North Dakota adopted a rule drafted by the State Court Committee on Tribal and State Court Affairs.

The Minnesota Supreme Court has adopted rules on state court recognition of Tribal court orders.

The rules were updated and amended in 2018. Recognition of a Tribal court order is mandatory if required by federal or state statute, for example the federal Violence Against Women Act requires recognition of an order for protection that is issued by a Tribal court.²⁹ There is also a rule that provides specific procedures for Tribal court civil commitment order to be enforced by a state district court.³⁰ Finally, in all other cases, the court can schedule a hearing, and generally shall enforce orders unless the order is invalid, the court lacks jurisdiction, the parties were not given due process, the order was obtained by fraud, or the Tribal court doesn't enforce state court orders.³¹

exception to the definition or special treatment by Congress.²¹ The Ninth Circuit has upheld OSHA enforcement of a Tribe-owned and operated sawmill, finding that a treaty right to exclude was insufficient.²² The Ninth Circuit in the leading *Coeur d'Alene* case also held that OSHA applied to an otherwise normal commercial Tribal farm enterprise operating in interstate commerce that employed primarily Tribe members (and some non-Indians), where none of the recognized exceptions expressly applied.²³ The Second and Seventh Circuit Federal District Courts have ruled similarly under the *Coeur d'Alene* framework in applying OSHA to Tribal commercial enterprises.²⁴

In contrast, the Tenth Circuit held that OSHA did not apply to a Tribal business manufacturing wood products owned and operated by the Tribe, where enforcing OSHA would have infringed on Tribal sovereignty and self-government and treaty language providing the right to exclude non-Indians.²⁵ In a more recent 2020 case, the Eighth Circuit—which includes Minnesota—similarly held that OSHA regulations did not apply to a Tribe-owned commercial fishery employing only Tribal employees given an explicit treaty right to fish.²⁶

Accordingly, OSHA is an example of a federal law of general applicability where the case-by-case application to Indian Tribes varies depending on which federal circuit or federal district court is considering the case.

The Age Discrimination in Employment Act of 1967 (ADEA)²⁷ prohibits employers from discriminating based on age. Like OSHA, the ADEA does not specifically exempt Tribes, but the Eighth Circuit has held that the law does not apply to Tribes where its application would interfere with Tribal self-government and a specific right reserved to Indians—by treaty, statute, agreement, or executive order.²⁸ Applying the *Coeur d'Alene* framework, the Eighth Circuit said that “absent clear and plain Congressional intent,” the ADEA does not apply to an action involving a Tribal employee, Tribal employer, and purely internal reservation employment.²⁹ Again, the Circuit Courts have reached different conclusions on when the ADEA and other laws of general applicability apply to Indian Tribes.³⁰

Fair Labor Standards Act (FLSA)³¹ establishes the federal minimum wage and overtime laws; it also prohibits sexual discrimination in compensation and provides rules for the employment of youth under 18. The FLSA applies to private employers with annual sales of \$500,000 or more, state, federal, and local governments, and to certain employees engaged in interstate commerce or production.³² Although the FLSA exempts certain categories of workers from coverage, it does not specifically exempt Indian Tribes or employers on Indian reservations.³³ Again, federal courts have ruled differently on whether or when the FLSA applies to Indian Tribes.³⁴ In a 2021 decision, the federal district court for Minnesota dismissed an action based on the Equal Pay Act (EPA), which is part of the FLSA.³⁵ The court held that sovereign immunity barred the action, and reiterated that neither the EPA nor the ADA and Title VII apply to “Indian Tribes when the matters at issue are purely internal.”³⁶

National Labor Relations Act (NLRA)³⁷ provides private employees the right to form or join unions and to engage in collective bargaining activities. The law is also silent on whether it applies to Indian Tribes. Because there is no clear direction in the NLRA, like other laws of general applicability, the issue has been litigated around the country, and varied rulings from

the federal circuit courts have meant that certain Tribes are subject to the provisions of the act, while others are not.³⁸

The **Family Medical Leave Act (FMLA)**³⁹ is similarly silent as to whether it applies to Indian Tribes. Tribes may choose to adopt the FMLA or provide FMLA-type leave policies to employees. While Indian-owned businesses could be required to provide FMLA leave in areas outside of Indian country, it is likely that Tribal sovereign immunity would bar a lawsuit against the Tribe for failing to comply with FMLA, on or off the reservation.⁴⁰

The EEOC largely lacks jurisdiction over discrimination matters involving Indian employers engaged in purely Tribal activities.

The U.S. **Equal Employment Opportunity Commission (EEOC)** is responsible for enforcing federal employment discrimination laws against employers covered by these laws. Whether the EEOC has jurisdiction over an Indian employer depends on which federal law is at issue and whether the employer is a private employer.⁴¹ The EEOC does *not* have jurisdiction over charges of employment discrimination based on race, national origin, sex, color, or religion under Title VII, disability under the ADA, or genetic information under GINA for Tribal employers. However, the EEOC may have jurisdiction over private employers operating on Tribal land or contracting with a Tribe, or over a Tribally owned business performing primarily nongovernmental activities that is not controlled by or integrated with the Tribe. In addition, the EEOC has indicated its jurisdiction over age discrimination charges under the ADEA and gender-based discrimination under the Equal Pay Act—as long as the EEOC’s jurisdiction would not interfere with treaty rights or Tribal sovereignty. A Tribe member employed by an employer subject to EEOC enforcement would also be covered by these laws.

Employers on or near a reservation and the Bureau of Indian Affairs may exercise an Indian hiring preference.

The federal government has recognized a hiring preference for Indian Tribes as well as for the Bureau of Indian Affairs (BIA).⁴² There is also an Indian preferential treatment exception under Title VII of the Civil Rights Act, which allows employers on and near a reservation to have a preference for hiring Indian applicants.⁴³ Indian hiring preferences have been upheld in a number of cases because the hiring preference is considered a political preference, and not a race-based preference.⁴⁴ Tribes have also recognized Indian employment preferences through Tribal employment rights ordinances (TEROs), laws, or policies, or through their Tribal Employment Rights Office, which governs labor and employment rights and provisions on a reservation. The EEOC may work with or contract with a Tribal Employment Rights Office regarding Tribal preferences and other Tribal employment issues.⁴⁵

State labor and employment laws do not generally apply to Tribes; however most Tribes have their own employment laws and policies.

Generally, state employment and labor laws do not apply to Indian Tribes.⁴⁶ For instance, state antidiscrimination laws and required leave acts do not apply to Tribal employers on the reservation, but unemployment compensation is available to employees of Tribes who elect to

become reimbursing employers, as provided by federal and state law.⁴⁷ The Minnesota Supreme Court has ruled that the Minnesota Workers' Compensation Act is a civil regulatory law that would not apply to an Indian Tribe, and also found that Tribes in those cases have not waived their sovereign immunity from suit.⁴⁸ Other state courts have applied workers' compensation laws to non-Tribally owned businesses operating in Indian country.⁴⁹

Most Tribes have their own employment laws and employment policies and may have a Tribal Employment Rights Office or applicable TEROs governing Tribal employment matters. Many Tribes have policies that mirror state or federal discrimination and leave policies. The Tribe may or may not choose to waive their sovereign immunity with regard to those laws and policies, which may affect the ability of an employee or applicant to sue under those provisions, or in the case of federal discrimination laws, for the EEOC to get involved in any investigation or enforcement action.

⁴⁸ *Tibbetts v. Leech Lake Reservation Business Committee*, 397 N.W.2d 883, 887-90 (Minn. 1986).

⁴⁹ *State of North Dakota ex rel. Workforce Safety & Ins. v. JFK Raingutters*, 733 N.W.2d 248, 255 (2007).

Federal law provides for three distinct types of gambling on Indian land and provides separate regulatory mechanisms for each.²

Class I gambling, which includes traditional Indian ceremonial games, is under the exclusive control of the Tribes.

Class II gambling consists of bingo, keno, pull-tabs, punchboards, and nonbanking card games (games where players play against each other rather than against the house) as long as those games are authorized or not prohibited by state law. Class II gambling is governed by a Tribal ordinance that must meet federal guidelines and be approved by the National Indian Gaming Commission (NIGC).

Class III gambling consists of all games that are not class I or class II, including common casino games such as roulette, craps, chemin de fer, baccarat, and banking card games such as blackjack. The term also includes all mechanical or electronic gambling machines such as slot machines and video poker devices. Class III gambling is conducted under a compact that each Tribe negotiates with the government of the state in which it is located. Compacts can specify which party has civil and criminal jurisdiction over gambling enforcement and can apply any state laws to class III gambling that each party believes necessary for regulation.

An Indian Tribe does not have complete authority to conduct any type of gambling it wishes. By dividing gambling into three classes, the federal law permits increasing levels of state involvement and control over the actions of Tribes. While Tribes have complete control over class I gambling, they may only conduct and regulate class II gambling if the state “permits such gaming for any purpose by any person, organization or entity.”³ The right to conduct class III gambling depends on both the state permitting that type of gambling by any person, organization, or entity and on the state and Tribe entering into a compact memorializing the terms of their agreement.⁴ There have been significant disputes regarding the role of states in prohibiting and regulating Indian gambling, and the responsibility of states to engage in negotiations to establish Tribal-state compacts.

States’ Roles

States have limited rights to regulate or prohibit Indian gambling.

Under IGRA, a state cannot *prohibit* Indian gambling if it is a type of gambling that the state allows or regulates in any way. The states’ right to *control* Indian gambling is also sharply limited under federal law.

States have the ability to prohibit some class II gambling, but only if the state does not permit that type of gambling by any person or entity in the state. A state can permit a type of gambling without it being commercial or profit-making; gambling by nonprofit organizations for charitable purposes, or even private social betting, can provide a basis for Tribes to claim the right to conduct comparable forms of gambling. As a result, a state can only prohibit class II gaming if the state completely prohibits those activities.⁵ If a state permits, regulates, or tolerates bingo and other class II games, then the state has no role in regulating those games on

Income earned by employees at Indian casinos is taxable if the employee is a non-Indian. Income earned at an Indian casino by Tribal members is nontaxable by the state.

Minnesota’s Tribal-state compacts allow blackjack and slot machines.

Compacts between the state and Indian Tribes located within Minnesota permit class III games in the form of blackjack and video games of chance. The compacts provide for: inspection and approval of machines by the state Department of Public Safety; licensing of casino employees; standards for employees such as prohibiting employment of individuals with felony convictions; machine payout percentages; and regulation of the play of blackjack. In addition, the legislature authorized simulcast transmissions of horse racing to locations on Tribal land where the Tribe has entered into a Tribal-state compact.¹³

The compacts governing blackjack obligate Minnesota Indian Tribes to pay the state a total of approximately \$150,000 each year to assist in administering the compacts. However, they do not require Tribes to pay a share of gambling proceeds to the state.

These compacts are in effect until renegotiation.

Both types of compacts (video games and blackjack) provide that they remain in effect until the two parties renegotiate them. Either party can request a renegotiation at any time.

There is no agreement on the outcome of Indian gambling if Minnesota were to prohibit gambling.

The federal law says that if a state allows a form of gambling by any person for any purpose, Indians in that state have the right to conduct that form of gambling. It makes no mention of what happens if a state repeals that authorization after a compact is negotiated.

The Minnesota Legislature repealed the law on which the video game compact was based. The law legalized and licensed “video games of chance” without allowing betting on them. At the time the law was repealed, the legislature also said that the repeal was not intended to affect the validity of Tribal-state compacts that authorized video machines.¹⁴

States may legalize sports betting.

In 2018, the U.S. Supreme Court struck down a 1992 federal law that placed a ban on commercial sports betting in most states, effectively opening the door for states to legalize sports betting within their borders.¹⁵ Since 2018, many states have legalized a form of sports betting (online or in-person on Tribal land casinos), some doing so through compacts with Indian Tribes. Minnesota has not yet legalized sports betting.

well settled by many decisions of this Court that a general statute in terms applying to all persons includes Indians and their property interests.”³

The trend toward greater Tribal self-government on environmental matters began in the 1970s.

In 1970, President Nixon announced a national policy aimed at Tribal self-determination, a principle eventually embodied in the Indian Self-Determination and Education Assistance Act passed by Congress in 1975. In 1983, President Reagan gave further impetus to this trend in a statement on Indian policy, noting that despite passage of the act:

major Tribal governmental functions[, including]...developing and managing Tribal resources . . . [,] are frequently carried on by federal employees. The federal government must move away from this surrogate role which undermines the concept of self-government. This Administration intends to restore Tribal governments to their rightful place among the governments of this nation and to enable Tribal governments...to resume control over their own affairs.⁴

The following year, the Environmental Protection Agency (EPA) articulated its policy regarding the operation of federal environmental programs on Indian lands.

EPA recognizes Tribal Governments as sovereign entities with primary authority and responsibility for the reservation populace. Accordingly, EPA will work directly with Tribal Governments as the independent authority for reservation affairs, and not as political subdivisions of states or other governmental units... [T]he agency will view Tribal Governments as the appropriate non-federal parties for making decisions and carrying out program responsibilities affecting Indian reservations, their environments, and the health and welfare of the reservation populace... [T]he agency will assist interested Tribal Governments in developing programs and preparing to assume regulatory and program management responsibilities for reservation lands.⁵

EPA officially reaffirmed this policy in 2021.⁶

Federal Delegation of Authority to Indian Tribes

Tribes may administer certain federal environmental programs.

Many of the core environmental laws enacted during the 1970s and 1980s expressly provided that EPA could delegate authority to qualified states to administer regulatory programs, such as inspecting facilities, issuing permits, determining compliance, and enforcing against violators. Between 1986 and 1995, Congress amended those laws to allow a similar delegation to Indian Tribes, but only with respect to certain authorities, as reflected in the partial list below:⁷

- **Clean Water Act:** Planning and receiving federal funding for the construction of wastewater treatment plants; establishing water quality standards; monitoring and inspecting facilities for compliance; issuing and enforcing permits containing pollution limits; controlling pollution from “nonpoint” sources

- **Safe Drinking Water Act:** Establishing and enforcing drinking water standards; protecting water wellhead areas from contamination; regulating the injection of fluids into the ground (e.g., from nonresidential septic systems)
- **Clean Air Act:** Issuing and enforcing permits limiting emissions; designating air quality areas⁸
- **Comprehensive Environmental Response, Compensation and Liability Act:** Removing hazardous wastes from contaminated lands or pursuing agreements with others to do so; submitting priorities for cleanups to EPA; consulting with the EPA on cleanup methods
- **Federal Insecticide, Fungicide and Rodenticide Act:** Cooperating with the EPA to train and certify pesticide applicators and to enforce the act
- **Toxic Substances Control Act:** Emergency response activities regarding asbestos; reducing exposure to lead⁹

If Tribes do not seek or do not receive approval from EPA to administer federal environmental laws, EPA retains responsibility for their implementation. However, EPA is required to consult with Tribes regarding policies that affect them, under both a presidential Executive Order and an adopted EPA policy.¹⁰

Tribes seeking delegation of authority must meet certain conditions.

In reviewing a Tribe's application for delegation of authority under these laws, the EPA must ensure that a Tribe satisfies criteria established by Congress. For example, the Safe Drinking Water Act requires that: (1) the Tribe has a governing body possessing substantial governmental powers and performing substantial duties; (2) the functions to be exercised are within the Tribe's jurisdiction;¹¹ and (3) the Tribe is reasonably expected to be capable of carrying out those functions in a manner consistent with the purposes of the act.¹²

Tribes are also eligible to receive federal financial and technical assistance to help carry out their environmental responsibilities. The purposes of the Indian Environmental and General Assistance Program Act of 1992 are to "provide general assistance grants to Indian Tribal governments...to build capacity to administer environmental regulatory programs that may be delegated by the Environmental Protection Agency," and to "provide technical assistance in the development of multimedia programs..."¹³

While this process is referred to as a delegation of federal authority, it may more properly be termed a recognition of a Tribe's inherent sovereignty. In *City of Albuquerque v. Browner*, the Tenth Circuit decision stated: "Congress's authorization for the EPA to treat Indian Tribes as states *preserves* the right of Tribes to govern their water resources. . . ." ¹⁴ Referring to section 1370 of the Clean Water Act, which allows states to impose water quality standards more stringent than those of the federal government, the court held that "Indian Tribes have residual sovereign powers that already guarantee the powers enumerated in section 1370, absent an express statutory elimination of those powers."¹⁵ One commentator has made the more general statement that "[i]n almost every instance where a statute has more or less explicitly

treated ‘Tribes as States,’ either the statute or an attendant Supreme Court opinion clarified that the Tribe itself, and not the statute, provided the source of the Tribe’s sovereignty.”¹⁶

Some Minnesota Tribes have been granted “treatment as state” status by the EPA, authorizing the Tribes to administer the federal programs listed in the table below.

Minnesota Tribes With EPA Treatment as State (TAS) Status

^a Section 106 provides funding to help Tribes understand, assess, and preserve water resources. Funds are used to develop water quality monitoring programs, conduct water quality assessments, purchase equipment, train personnel, and develop Tribal water quality ordinances.

^b Section 319 authority pertains to the control of pollution from nonpoint sources by such means as monitoring and assessing water quality, developing water quality standards, and ensuring compliance with those standards.

^c Section 303 grants authority to Tribes to develop and implement water quality standards for specific waterbodies. Section 401 authorizes the issuance of waivers for federal permits discharging into reservation waters.

^d Section 105 provides grants to plan, develop, and implement air pollution control programs.

^e Section 505(a)(2) requires that Tribes located within 50 miles of a facility that is seeking an air quality permit from the federal or state government be notified of such permits, so they may participate in the permitting process.

^f Section 402 grants authority to train workers to properly remove paint containing lead and to certify such training programs.

House Research Department

With respect to non-Indians, states have authority to regulate their activities on an Indian reservation unless preempted by federal law. In a 1983 decision, the Supreme Court expanded the concept of federal preemption of state authority over non-Indians on reservations, stating: “State jurisdiction is preempted by the operation of federal law if it interferes or is incompatible with federal and Tribal interests reflected in federal law, unless the State interests at stake are sufficient to justify the assertion of State authority.”²³

Federal regulatory environmental statutes apply on Indian lands.

Tribal law applies in the absence of federal statutes, or where Tribal law is more stringent than corresponding federal law. Qualified Tribes may administer several federal environmental programs designated by Congress or the EPA, and are eligible to receive federal financial and technical assistance for that purpose. The federal government retains authority to implement and enforce federal laws in Indian country where a Tribe is not delegated to do so.

State laws that prohibit certain polluting activities and that impose civil or criminal penalties for violations are likely to apply in Indian country to the same extent as in the rest of the state. State regulatory environmental statutes do not apply on Indian lands. The distinction between these two categories is not, however, a settled area of law.

¹¹ Although courts have held that Tribal authority does not extend to nonmembers in all cases, the Supreme Court ruled in 1981 that “A tribe may regulate . . . the activities of nonmembers who enter consensual relationships with the tribe or its members, through commercial dealing, contracts, leases, or other arrangements. A tribe may also retain inherent power to exercise civil authority over the conduct of non-Indians on fee lands within its reservation when that conduct threatens or has some direct effect on the political integrity, the economic security, or the health or welfare of the tribe.” [Citations omitted] *Montana v. United States*, 450 U.S. 544 (1981), at 565-566. As a result of this decision, a tribe may require, through a permit it issues or in a memorandum of understanding, that the non-Indian party affirmatively recognize the consensual relationship established. *Environmental Law Reporter*, “Environmental Protection in Indian Country: The Fundamentals,” vol. 47, November 2017, p. 10913.

Congress may authorize states to impose taxes within Indian country.

In some instances, federal law specifically authorizes state taxation of property or activities within Indian country.³ These grants are read narrowly under the general principle that Indian laws and treaties are to be construed liberally and ambiguities are to be resolved in the favor of American Indians. Indian tax immunities are generally only lifted when Congress has indicated “a clear purpose” to do so.⁴

Numerous Supreme Court cases have established a complex set of rules governing state and Tribal authority to tax Indians and activities in Indian country. The authority to impose state taxes in Indian country has been frequently litigated. Given the multiplicity of types of taxes and ways in which they are collected, the issues and rules can be complex and confusing. To provide a simplified guide to these rules, the tables in this chapter display the legal authority to apply state or Tribal taxes to Tribal members, to American Indians who are not Tribal members, to non-American Indians, and to property in Indian country. The “yes-no” answers given in the tables, in many instances, oversimplify complex constitutional or statutory issues. Therefore, these entries should be viewed with caution. The notes to the tables provide case authority for the rules outlined in the tables and give some flavor of the complexity involved.

Income Taxation

States, in general, may not tax the income of Tribes or income of an enrolled member that is derived from Indian country⁵ sources. States, however, may tax the income of enrolled members from sources outside of Indian country. States also may tax the reservation income of American Indians who are not members of the Tribe. Although Tribal governments generally do not do so, they have the authority to impose income taxes on reservation income of Tribal members. Tribal governments may also, in some limited circumstances, be able to tax reservation source income of nonmembers. These income tax rules are listed in Table 1 and its notes. References in the table to “Indian country” refer to the Tribe’s reservation, allotments, and dependent community; in other words, it is specific to the applicable Tribe, not all of Indian country. References in Table 1 to individuals who are “in” or “outside” of Indian country refer to the place of their residency.

Table 1

Property Taxation

Indian trust lands, whether held in trust for the Tribe or allotted for individual Tribal members, are exempt from ad valorem property taxation. By contrast, fee lands, whether owned by the Tribe or an individual member, are generally taxable.

Indian lands generally can be divided into trust lands and allotted or fee lands. Trust lands are held by the federal government “in trust” either for the Tribe or an individual American Indian. They are exempt from state and local taxation, based on their status as federal government property. Fee lands are owned directly by the Tribe or individual American Indians who can sell or transfer them. The property taxation of fee lands, held by Tribal governments or individual Indians within reservations, was not always clear. Before 1992 in Minnesota, Tribally owned lands were generally treated as exempt from taxation. In 1992, the U.S. Supreme Court held in *County of Yakima v. Confederated Tribes and Bands of the Yakima Indian Nation*⁵⁸ that fee lands allotted to individual Indians were subject to state and local ad valorem property taxes. After this decision, the Minnesota Department of Revenue advised counties that fee lands were generally taxable. As a result, most counties began taxing fee lands. However, questions remained as to whether the tax status depended upon the specific terms of the allotment act and whether it authorized state taxation. These questions were largely resolved by a 1998 decision in *Cass County v. Leech Lake Band of Chippewa Indians*. The Supreme Court held that the alienability of the lands was of “central significance.”⁵⁹ The decision, thus, makes it clear that essentially all fee lands in Minnesota are subject to property tax. Tribes will need to have their land transferred in trust to the federal government to be exempt from property taxes.⁶⁰

The Minnesota property tax applies to very little personal property, other than certain utility property and manufactured homes. Other states, however, extend their property taxes to more personal property, particularly business property such as equipment and inventory. In early cases, the Supreme Court upheld the power of states to tax the personal property of non-Indians located in Indian country, even when the property was used under leases granted by the Indians.⁶¹ (Personal property owned by Tribes or individual members and held on the reservation is exempt.⁶²) Since the early cases decided around the turn of the 20th century, the Supreme Court has not decided a personal property case. The lower courts, following Supreme Court cases on nonproperty taxes, have used a preemption analysis.⁶³ The issue typically is whether the state personal property tax is preempted by a specific federal statute, such as the Indian Trader Statutes, the Indian Gaming Regulatory Act, or Indian Reorganization Act, or whether it is preempted under general preemption issues under a sort of balancing test that compares state and local interests with Tribal interests. Treaties and laws enacted by specific Tribes may also be relevant to whether state and local property taxation is preempted or not. Lower federal court decisions vary in their results.⁶⁴ A 2013 administrative rule adopted by the BIA may increase the likelihood of preemption.⁶⁵

Although most Tribal governments do not impose property taxes on properties, they do have this authority.

Table 3 outlines the rules governing real property taxation.

House Research Department

Table 4 displays the amount of tax-exempt Indian trust lands by county for the three most recent tax-exempt abstracts (2004, 2010, and 2016). The table shows the dollar amounts of exempt market value and the percentage that this value makes up of taxable market value for each county. The total value of exempt Indian land has increased over this period, growing from \$1.12 billion in 2004 to \$1.98 billion in 2016. However, the amount of this value relative to the taxable values has declined from 1.9 percent in 2004 to 1.2 percent in 2016.

Scott County has the highest amount of tax-exempt value (\$397 million) with Carlton County second (\$309 million). Scott County is home to the Mystic Lake Casino, the largest Tribal casino in Minnesota. However, the \$397 million amount is still less than 3 percent of Scott County's taxable market value. Indian trust lands are relatively the highest in Mahnommen County (14.8 percent), reflecting the county's low tax base and the fact that Indian lands make up a large portion of the county. Carlton County (at 10.2 percent) is the only other county where Indian lands exceed 10 percent of taxable market value.

House Research Department

Local governments have expressed concern about the potential loss of property tax base as profits from Indian gaming enterprises are used to acquire lands that are then transferred into trust and exempted from property tax.

Large-scale Minnesota Tribal gaming enterprises have been in operation for more than three decades.⁷⁶ By most accounts, these enterprises have proven to be financially successful. An independent consultant estimated the total gaming revenues of Minnesota Tribes to be \$1.4 billion in 2010.⁷⁷ The success of Indian casinos has provided some Tribes with resources to begin repurchasing lands on reservations that passed from Indian ownership under the allotment policy of the late 19th and early 20th centuries. Some Tribes have made reacquiring these lands a priority.

Local government officials from areas that include reservations have expressed concerns about this practice.⁷⁸ Since trust lands are exempt from property taxation, transfers into trust status could significantly reduce local tax bases. Many of the areas of the state containing Indian reservations already have relatively low property tax bases. So far, significant numbers of transfers have not shown up in property tax data. However, the number of acres of exempt Indian lands has been increasing. There was an increase of less than 1 percent between 2004 and 2010 in exempt abstracts. But the number of exempt acres (as opposed to the value of the land and improvements) increased by nearly 10 percent between 2010 and 2016. Even though the number of exempt acres has increased for most counties, these exempt lands made up a smaller share of the total taxable market value in 2016 than in 2010. (See Table 4) This is likely due to increases in the value of nonexempt property, which means exempt lands now make up a smaller portion of those counties' overall tax bases.

In-lieu Payments

Some Tribal governments make in-lieu payments to help pay for local services.

Although trust lands are exempt from taxation, some Tribal governments make in-lieu payments to cities and counties to offset the cost of providing local services.

Based on a survey of local governments conducted by House Research in 2006, these in-lieu payments totaled a little more than \$6 million in 2005. However, that total included a \$5 million payment by the Fond du Lac Band of the Lake Superior Chippewa to the city of Duluth under an agreement related to its casino in Duluth. Under that agreement, the band paid the city 19 percent of the gambling revenues from the casino.⁷⁹ In effect, these payments were more in the nature of revenue sharing or compensation of an investment partner. In 2009, the band ceased making payments to the city on the grounds that the underlying agreement violated federal law (even though it had been approved by the federal court). The National Indian Gaming Commission (NIGC), the federal entity that regulates Indian gaming, determined in 2011 that this agreement violated federal law. The federal courts held that the NIGC determination effectively invalidated the agreement and eliminated the requirement for the band to pay a share of casino profits to the city. The federal courts ultimately determined that the band was not required to pay any revenues after it stopped paying in 2009 (nor was it entitled to refunds of payments made before then).⁸⁰ The city and band reached an agreement

in June 2016 providing for annual payment by the band of \$150,000 to the city as reimbursement for services, ending seven years of litigation in state and federal court.⁸¹ During the period the agreement was in effect (1994-2009), the band paid the city approximately \$75 million.⁸²

Tax Agreements with Tribes

Minnesota and some other states have entered into tax agreements with Tribes to provide for collection of state taxes and distribution of the revenues. The twin difficulties outlined at the beginning of this chapter—(1) the impracticality of the state collecting state tax legally owed by non-Indians for transactions in Indian country, and (2) the potential for illegally imposing state tax on immune Tribal members or businesses—has led to agreements between Tribal governments and the state. These agreements attempt to preserve the Tribes’ and Tribal members’ immunities, while collecting the state tax legally owed by nontribal members and dividing these revenues between the state and the Tribes.

The Minnesota Department of Revenue has entered agreements with ten of the 11 Minnesota Tribal governments. (No agreement applies to Prairie Island.) The agreements cover the following taxes:

- Sales and use taxes
- Cigarette and tobacco products taxes
- Alcoholic beverage excise taxes (i.e., the taxes on liquor, wine, and beer)
- Motor fuels taxes (e.g., the gas tax)

These agreements all follow a similar pattern. The taxes are paid at the regular state rate to the Department of Revenue. The department, in turn, refunds part of the taxes to the Tribal government. These refunds have two basic components:

- A **per capita payment** intended to refund the tax paid by members living on (or adjacent to) the reservation. Under federal law, these transactions are exempt from tax.
- A **revenue-sharing payment** dividing the tax paid by nonmembers on the reservation equally between the Tribal government and the state. The agreements also refund half of the sales tax paid by members on their off-reservation purchases.

Table 5 lists the per capita amounts by tax type for each Tribal government. Table 6 describes the formulas used to calculate revenue-sharing agreements by tax types. These formulas are generally the same for all of the Tribal governments.

In 2001, the legislature authorized the Department of Revenue to enter into agreements with Tribes to collect state fees for on-reservation activities and to provide for refund or sharing of the proceeds of the fees.⁸³ Under this authority, the department has entered agreements with nine of the 11 Minnesota Tribes (except Leech Lake and Prairie Island, which also does not have a tax agreement) to reimburse the Tribes for the fees that the state imposes on cigarettes—the health impact fee and the fee imposed on nonsettlement cigarettes. For calendar year 2012, when agreements with six of the nine Tribes were in effect, the per capita amount was \$54.89.

The health impact fee was repealed by the 2013 Legislature as a part of an increase in the cigarette tax.⁸⁴ The nonsettlement fee remains in place and was increased by the 2013 Legislature to 50 cents per pack; the fee remains subject to the agreements and results in small payments. Cigarette and tobacco amounts in Table 5 reflect the combined excise tax and the nonsettlement fee amounts.

The 2013 Legislature increased the cigarette excise tax by \$1.60 per pack of 20 and added an inflation adjustment, which was later repealed in 2017. The cigarette excise tax presently stands at \$3.04 per pack. This has significantly increased payments for cigarette and tobacco taxes under the agreements. Since Tribal governments are, in effect, both cigarette vendors and recipients of the agreement payments based on their cigarette sales, they can set their retail cigarette prices to absorb some of the state tax and to increase their market share. That strategy could increase their revenues, if holding down the price of the cigarettes they sell increases their total sales by enough to offset the state's retention of one-half of the tax.

State Aid to Casino Counties

The state pays aid to most counties with Indian gaming casinos.

Under this aid program, the state pays 10 percent of its share of the taxes paid under the agreement to the county government. If the Tribe has casinos in two counties, the payments are divided equally between the two counties. The Mille Lacs Band has casinos in both Mille Lacs and Pine Counties. As a result, each county receives 5-percent shares (one-half of the otherwise applicable 10 percent). This aid program was enacted in 1997; the legislature has made several changes in the program since it was enacted, in particular expanding the counties that qualified for aid.⁸⁷ In 2003, the legislature modified the aid program to allow counties with casinos not subject to tax agreements (Goodhue) to receive 5 percent of the excise tax revenues generated from activities located in the county.⁸⁸

Table 8 below shows the amount of aid paid in fiscal years 2017 to 2019 by county. Total aid in 2019 equaled \$1,597,206, with the largest payment, \$422,258, being made to Scott County.

Child Care Assistance

Federal. The Child Care and Development Block Grant Act (CCDBG) is a federal law that authorizes the Child Care Development Fund (CCDF) and outlines how states, territories, and federally recognized Tribes (including Tribal organizations) may use federal money to subsidize the child care expenses of low-income families.¹ Tribes may apply to the U.S. Department of Health and Human Services to administer child care assistance on or near a reservation.² If a Tribal plan is approved, then the Tribe receives federal money from the amount appropriated to the CCDF that the Secretary of Health and Human Services must set aside for Tribes. Federal law gives Tribes some flexibility in structuring their separate programs, and Tribes are not required to comply with all the federal requirements with which states must comply.

State. Minnesota receives federal money from the CCDF to administer the state's child care assistance program (CCAP) and appropriates state money to the program. The Department of Human Services (DHS) oversees the program and county agencies administer the program under DHS supervision. State statute provides that DHS may enter into contracts with federally recognized Tribes with reservations in Minnesota to administer the program, in place of a county agency, on the Tribe's reservation.³ As of the date of this report, two Tribes with reservations in Minnesota contract with DHS to administer CCAP, the White Earth Band of Chippewa Indians and the Red Lake Band of Chippewa Indians. The White Earth Band administers CCAP for Tribal members and their families who live on and off the reservation in Mahnomon, Clearwater, and Becker Counties. The Red Lake Band administers CCAP for Tribal members and their families who live on and off the reservation in Beltrami County.

Civil Commitment

Commitment by Tribal Court. A special provision in Minnesota's Civil Commitment Act authorizes the Commissioner of Human Services to contract with and receive payment from the federal Indian Health Service, so that members of a federally recognized Indian Tribe within the state who have been committed by a Tribal court to the Indian Health Service for care and treatment of mental illness, developmental disability, or chemical dependency can be admitted to state-operated treatment programs. This provision also allows a Tribe to contract directly with the commissioner for treatment of Tribal members who have been committed by a Tribal court. The act guarantees individuals admitted to treatment programs under these provisions all of the patient rights under [Minnesota Statutes, section 253B.03](#), and requires that the commitment procedure utilized by the Tribal court provides due process protections similar to those under the state's civil commitment laws.⁴

Substance Use Disorder Treatment

The state Department of Human Services may enter into agreements with federally recognized Tribal units to pay for substance use disorder (SUD) treatment services and provide prevention, education, training, and community awareness programs.²⁶ Treatment programs for American Indians must be designed to meet community needs, and must recognize American Indian cultural and social needs. The American Indian Advisory Council assists the agency in formulating policies and procedures relating to SUD and substance misuse by American Indians.²⁷

Tribal Maternal, Infant, and Early Childhood Home Visiting

Tribal Maternal, Infant, and Early Childhood Home Visiting (TMIECHV) is a federal program that provides grants to Tribes and Tribal organizations to develop and implement home visiting programs. Home visiting programs provide in-home education and culturally sensitive resources on health, development, and education to expecting parents and caregivers of children under five. The program is funded by a 3 percent set-aside from the federal appropriation for the MIECHV program, which provides funding to states to award home visiting grants. The White Earth Band of Chippewa Indians is the only recipient of a TMIECHV grant in Minnesota. The White Earth Band uses the grant money to provide home visiting to American Indian and non-Indian expectant families and families with children living on the White Earth Reservation. Tribes and Tribal organizations may also apply to the state for MIECHV grants.

Welfare Reform

Federal. Federal welfare reform legislation enacted in 1996 (Pub. L. No. 104-193) replaced Aid to Families with Dependent Children (AFDC) with a block grant program for states called Temporary Assistance for Needy Families (TANF). Under this legislation, federally recognized Indian Tribes are eligible to apply to the U.S. Department of Health and Human Services to create and administer welfare programs under the TANF block grant. If a Tribal plan is approved, Tribes receive federal funds out of the state's federal TANF block grant allocation to implement separate Tribal TANF programs. In structuring a separate TANF program, Tribes have the flexibility to establish their own work participation rates and time limits for receipt of benefits, which may differ from the federal requirements with which states must comply.

State. In 1997, Minnesota enacted welfare reform legislation to implement the TANF requirements. Minnesota's program is the Minnesota Family Investment Program (MFIP). One provision of the MFIP legislation requires county governments to cooperate with Tribal governments in implementing MFIP.²⁸ Another provision of the legislation authorizes the Commissioner of Human Services to enter into agreements with Tribal governments to provide employment services.²⁹ Two Minnesota Tribes, the Mille Lacs Band of Ojibwe and the Red Lake Band of Chippewa Indians, applied for and received federal approval to operate separate Tribal TANF programs. The Mille Lacs Band of Ojibwe program began operating January 1, 1999, in a six-county area covering Aitkin, Crow Wing, Morrison, Benton, Mille Lacs, and Pine Counties. It serves TANF-eligible families where one or more of the eligible adults is a member of the band.

In 2005 the Mille Lacs Band expanded the Tribal TANF program to enrolled members of the Minnesota Chippewa Tribes who reside in Hennepin, Ramsey, and Anoka Counties. The Tribal TANF program has different income guidelines for participants than the county programs.

The Red Lake Band of Chippewa Indians program began operating on January 1, 2015, in a two-county area covering Beltrami and Clearwater Counties. In order to be eligible for the Red Lake Band's Tribal TANF program, there must be at least one assistance unit member who is a citizen of the Red Lake Band of Chippewa Indians or is enrolled or eligible to be enrolled with another federally recognized Tribal Nation and resides within the boundaries of Red Lake Nation. Some of the features of the Red Lake Band's program are different from MFIP, including the sanctions imposed for noncompliance.

Indian Child Welfare Laws

by Sarah Sunderman (651-296-8079)

by Mary Davis (651-296-9253)

There are numerous federal, state, and Tribal laws that affect American Indian children's welfare. Many of these laws are aimed at addressing the disproportionate rate of American Indian children and families in the child protection system. These laws create a complex relationship in the application of federal, state, and Tribal laws that impact the participants in these cases and create specific requirements for social service agencies. These laws also intersect with funding streams, such as grant programs and foster care payments.

Federal Laws on Indian Child Welfare

The Federal Indian Child Welfare Act creates federal requirements for the placement of American Indian children in custody cases.

In 1978, Congress passed the federal Indian Child Welfare Act (ICWA).¹ The statute creates federal requirements that state courts must follow in the placement of American Indian children in nonparental custody cases, whether the placement is voluntary or involuntary on the part of the parents. The act covers foster care placement, termination of parental rights, pre-adoptive placement, the adoption of American Indian children by non-Indians, and status offenses in juvenile delinquency cases. The intent of the act is to preserve the cultural identity of American Indian children and to promote the stability and security of Indian Tribes and families. The act does not apply to custody disputes between parents, such as in a divorce, though it has been held to apply to intra-family custody disputes between parent and grandparent when all parties are enrolled members of a Tribe.² The act does not apply to placements for juvenile delinquency where the delinquent act would be a crime if committed by an adult.

The act requires notice to Tribes and American Indian custodians of an involuntary, covered out-of-home placement of an American Indian child. If the child's Tribe has a Tribal court, the court may take jurisdiction in the matter.³ If there is a Tribal court and the child lives on the reservation, the matter must be transferred to Tribal court. The act also allows the Tribe to intervene in a matter being conducted in state court.

The BIA periodically updates the federal guidelines on the implementation of the ICWA.⁴ These guidelines give states and Tribes specific information about meeting the requirements of ICWA. In 2016, the BIA issued the first agency rules on the implementation of the ICWA since it was passed in 1979.⁵ These federal regulations provide the specific requirements courts must follow to comply with the provisions of ICWA.⁶ The rules clarify a number of provisions of the law that were previously considered ambiguous and applied in an inconsistent manner around the country, including definitions for terms and applicable standards of evidence to prove a case.⁷

Types of ICWA cases. ICWA applies to children who are enrolled members of an Indian Tribe, or eligible for enrollment and have a parent who is enrolled in a federally recognized Tribe.⁸

The state courts must ask the participants on the record whether or not the children in the case are American Indians.⁹ The federal regulations provide that ICWA applies in a number of different types of court cases.¹⁰ The regulations also identify specific situations where ICWA does not apply: an initial emergency proceeding or placement¹¹ and a placement based on an act, which if committed as an adult would be deemed a crime. Divorce and custody proceedings between parents are also generally exempt from ICWA by definition. ICWA applies in:

- foster care placements;
- placements with a guardian or conservator where the parent or Indian custodian cannot have the child returned upon demand, but where parental rights have not been terminated;
- termination of parental rights cases;
- pre-adoptive placement; and
- adoptive placement.

Notice of an ICWA proceeding. Federal regulations clarify that the party seeking an involuntary out-of-home placement or termination of a parent's rights is required to provide notice when an American Indian child or an ICWA-eligible child (a child eligible for enrollment in an Indian Tribe and who has an Indian parent) is the subject of the proceeding. The rules identify what information has to be provided in the notice, including a copy of the petition for the action. The notice of the proceedings must be provided to the Indian parents, Indian custodians, and the child's Tribe, and copies must be provided to the Secretary of the Interior and the appropriate regional director of the BIA.¹² The notice to the parents must include information about the right to court-appointed counsel. The proceedings cannot occur less than ten days after the notice has been received, and the parents can request an additional 20 days to prepare.¹³

Court-appointed attorneys in ICWA cases. ICWA requires that parents be appointed an attorney.¹⁴ In Minnesota, if a parent, guardian, or child is indigent in a child protection case, he or she is appointed an attorney.¹⁵

Transfer of cases to Tribal court. If the child is already a ward of the Tribal court or if the child is domiciled on a reservation that has exclusive jurisdiction over child custody proceedings, then the state court must dismiss the state court action, notify the Tribal court, and send it the court records of the case.¹⁶ In any other case, the parent, the Indian custodian, or a child's Tribe can request the case be transferred to the child's Tribe. The request can be made orally on the record in court or in writing at any stage of the case.¹⁷ Once a state court has received a transfer petition, the court must transfer the case unless one of the parents of the child has objected to the transfer, the Tribal court has declined the case, or a good cause exists to deny the transfer.¹⁸ Good cause cannot include a failure to transfer past child protection cases related to the child, a child's lack of connection to the Tribe, or how the transfer will affect the current placement of the child.¹⁹

"Active efforts." Whether the placement is voluntary or involuntary, the court must find that "active efforts" have been made to keep the child with a parent. This is higher than the

“reasonable efforts” standard that applies under Minnesota law to cases involving placement of non-Indian children. “Active efforts” have been interpreted to mean a rigorous and concerted level of casework that requires local social service agencies to request the Tribal participation at the earliest time possible, to actively solicit the Tribe’s participation throughout the case, use the Tribe’s prevailing social and cultural values to preserve the American Indian child’s family and prevent out-of-home placement, and to return the child to the American Indian child’s family at the earliest possible time if out-of-home placement has occurred. The term “active efforts” is defined in the federal regulations, and examples of how to comply with this requirement are also provided in the 2015 update to the BIA ICWA guidelines.²⁰

“Qualified expert witness.” If a child placement is involuntary, a witness expert in American Indian child placement issues must be consulted on the question of possible serious emotional or physical damage to the child from the existing or proposed placement.²¹ The burden of proof for involuntary foster care placement is clear and convincing evidence. The standard of proof for involuntary parental rights termination is “beyond a reasonable doubt,” the criminal law standard, which is higher than the standard applied in terminating the parental rights of non-Indians.²²

A qualified expert witness can be a person identified by the Indian child’s Tribe or, if the court or a party cannot find someone through the Tribe, the BIA office serving that child’s Indian Tribe can assist in locating a person to testify, but the social worker who is working on the case cannot be the qualified expert witness.²³

Out-of-home placement of an American Indian child. For a foster care placement or a pre-adoptive placement, the court must follow the placement preferences in ICWA or follow the placement preferences of the child’s Tribe. For foster care placements, the preferences provide a tier structure as follows:

- 1) members of the child’s extended family;
- 2) a foster home licensed by the Tribe;
- 3) an American Indian foster home;
- 4) an institution approved by the Tribe or operated by an Indian organization.²⁴

For adoptive placements, ICWA preferences are as follows:

- 1) members of the child’s extended family;
- 2) other members of the child’s Tribe;
- 3) other American Indian families.²⁵

Voluntary proceedings for placement of an American Indian child, even with the parent’s consent, must also follow the ICWA placement preferences.²⁶

The Minnesota Indian Family Preservation Act requires that the ICWA placement preferences be followed and outlines specific requirements when deviation from the preferences are contemplated that are generally consistent with the 2015 BIA ICWA guidelines.²⁷ The federal regulations also elaborate on what constitutes “good cause” to deviate from the placement

preferences, which can include the wishes of either parent, the wishes of the child, or the extraordinary physical, mental, or emotional needs of the child.²⁸

Recent court challenge to ICWA. In November 2022, the U.S. Supreme Court heard arguments on *Haaland v. Brackeen* and three consolidated cases challenging the constitutionality of ICWA.²⁹ Plaintiffs include the state of Texas, three non-Indian couples who tried to foster or adopt American Indian children (including one Minnesota couple), and one biological mother of an Indian child. Defendants include several Tribal nations and the federal government. The plaintiffs asserted that (1) ICWA violates the Constitution's equal protection clause by discriminating based on race; (2) ICWA exceeds Congress's power by regulating adoption and child protection proceedings—traditionally state matters; (3) ICWA violates the 10th amendment of the constitution by requiring states to adopt or enforce federal law; and (4) ICWA unconstitutionally delegates legislative power to Tribes by allowing them to adopt their own order of placement preferences for use in state courts. The Court has not issued a decision at the time of this publication; a decision is expected by October 2023.

The Indian Child Protection and Family Violence Prevention Act addresses child abuse and neglect.³⁰

This federal law requires reporting and investigating allegations of child abuse and neglect on Tribal lands and the completion of background checks on foster families, adoptive families, and other individuals who have contact with American Indian children. It also authorizes funding for Tribal child abuse prevention and treatment programs.

The Fostering Connections to Success and Increasing Adoptions Act deals with foster care, adoption, and kinship assistance.³¹

Passed in 2008, this federal law gives Tribes the ability to directly access IV-E funds for foster care, adoption assistance, and kinship care assistance programs. (See page 110 for a description of IV-E agreements.) It requires state IV-E agencies to work with any Tribe that wants to negotiate an agreement with the state agency to administer all or part of its own IV-E program.

Minnesota Laws on Indian Child Welfare

The State Indian Family Preservation Act

In 1985, Minnesota adopted a state version of the federal Indian Child Welfare Act, which is known as the Minnesota Indian Family Preservation Act (MIFPA).³² The state law was intended to call the controlling federal law to the attention of state courts and professionals in child placement proceedings.

The MIFPA was amended in 2015 and incorporated numerous changes to the existing state law.³³ The changes addressed ambiguities in case law, but also tied definitions to federal definitions and made aspects of the state law more consistent with the BIA ICWA guidelines. Some of the notable changes include the following:

- Changing the definition of “relative” to be consistent with the federal ICWA
- Providing that a “parent” includes a father as it is defined by Tribal custom or Tribal law and that paternity is acknowledged when an unmarried father takes any action to hold himself out as the biological father³⁴
- Adding a new definition for the term “Qualified Expert Witness” (QEW) and providing specific criteria for finding and using a QEW
- Requiring all social service agencies or private child-placing agencies to inquire of known parties about the child’s lineage to determine if a child is potentially an American Indian child
- Requiring notice to the Tribe from the social service agency, including available information about the child and parents, within seven days of the beginning of family assessment or investigation
- Requiring the court to notify a Tribe if the Tribe of the child is known when there is an emergency hearing for out-of-home placement
- Requiring the social service agency to involve the child’s Tribe at the earliest possible time in the case, but provides that the Tribe may choose to participate at any point in the case
- Providing criteria for deviation from the placement preferences under ICWA and specifically requiring that good cause to deviate from the placement preferences must be determined at each stage of the proceeding
- Creating a statutory definition of the term “active efforts” and providing specific criteria that the social service agency must meet in order for the court to order an American Indian child into an out-of-home-placement³⁵
- Creating a statutory definition of the term “best interest of an Indian child”
- Requiring a social services agency to avoid out-of-home placement by working with the Tribe at the earliest possible time and looking for alternatives to out-of-home placements
- Providing that good cause to deny a transfer to Tribal court cannot include an assessment of the Tribal court or social service agency who would accept the case, but the court may find good cause not to transfer a case if there is no Tribal court to send the case to or if there is an undue hardship to the parties to transfer the case that goes beyond geographic distance alone³⁶

The state law provides many specific requirements for local social service agencies who may be doing an assessment or investigation. The law is specifically triggered in any instance where an American Indian child may be put into out-of-home-placement. MIFPA does not allow the courts to determine the applicability of this chapter based on whether an Indian child is part of an existing Indian family or based on the level of contact the child has with the child’s Indian Tribe, reservation, or Indian community.³⁷

The federal ICWA law and the regulations enacted by the Department of the Interior are controlling in these cases; however, where MIFPA and other state laws provide greater protections to American Indian families, courts in Minnesota will need to comply with the state laws.³⁸

Tribal/State Indian Child Welfare Agreement

Negotiated between all of the Tribes in Minnesota and the Minnesota Department of Human Services, this agreement identifies the roles and responsibilities of the Tribes and the department in the provision of child welfare services to American Indian children and their families. The stated purpose of the agreement is to strengthen implementation of the ICWA and the MIFPA, thereby protecting the interests of American Indian children and their families and maintaining the integrity of the child's family and the child's Tribal relationship. The agreement applies to all American Indian children in Minnesota, whether or not the child's Tribe executed the agreement. The agreement was developed to maximize the participation of Tribes in decisions regarding American Indian children, address barriers to implementing services in child protection matters, and prevent foster placement and non-Indian adoptions. This agreement was signed by the Minnesota Department of Human Services and the Tribal governments in 1999, and was amended in 2007.

American Indian Child Welfare Programs³⁹

In 2008, a program called the American Indian Child Welfare Initiative reformed the county-based delivery of child welfare services into a Tribal delivery system for American Indian children and their families who live on the Leech Lake, Red Lake, and White Earth reservations.⁴⁰ The Tribal programs exceed federal child welfare performance standards for measures related to placement stability, timeliness to adoption, and rate of relative care. Tribal programs provide child welfare services including child abuse prevention, family preservation, child protection services, foster care, foster care licensing, children's mental health screening, reunification, and customary adoption services.

Tribal/State IV-E Agreements

Title IV-E is a federal entitlement program that provides financial support to states and Tribes to prove the quality of foster care and adoption programs. Four Minnesota Tribes have negotiated Tribal IV-E agreements with the Minnesota Department of Human Services: Leech Lake, White Earth, Mille Lacs, and Red Lake Bands of Ojibwe. These agreements replace the individual county and Tribal out-of-home placement supervision agreements and apply statewide. The Title IV-E agreement must be in effect before Tribes and counties can access federal reimbursement for costs associated with managing a foster care program for children who are in the custody of the Tribal social services agency. Eligible costs include administrative costs, training, and out-of-home placement costs.

Indian Child Welfare Grants⁴¹

The Commissioner of Human Services has statutory authority to provide grants to Tribal social service agencies and other organizations to support Tribal child welfare programs, including prevention, reunification, and legal services. Services provided through these grants have included: child welfare and mental health services for families; early intervention and family engagement; foster home and adoptive placement resource development; family reunification services; and court advocacy.

Native American Equity Pilot Project and TTCP

The Department of Human Services (DHS) began a pilot project in 2017 to address the disproportionate number of American Indian children in out-of-home placements. The department partnered with the University of Minnesota-Duluth, St. Louis County, and Tribes to study the underlying causes of the child welfare disparities, prepare a report, and develop a training curriculum for county and Tribal social service agencies. The pilot project concluded in 2020.

In January 2020, the University of Minnesota Duluth began the Tribal Training and Certification Partnership (TTCP), which partners with Tribes, the Child Welfare Training Academy, and the Child Safety and Permanency Division at the DHS to provide education and training to professionals in the child welfare system.⁴²

Education Laws Affecting Indian Students in Early Education Through Grade 12

by Tim Strom (651-296-1886)

by Cristina Parra (651-296-8036)

Counting American Indian Students

There are two primary counts of American Indian students in Minnesota. The “legacy count” or “state count” includes persons who identify as American Indian, as well as persons who identify as multi-racial. The state count is used for the state’s American Indian Program aid and to determine whether a district has ten or more American Indian students, triggering a state law requirement that the district have an American Indian parent committee. This count identifies 26,794 public school students, or 3.1 percent of the total student population, as American Indians in the 2022-2023 school year.

The federal count does not include students who self-identify as American Indian and another race, or as American Indian and Hispanic. The federal count is used for federal reporting under federal law and state reporting in the Minnesota Report Card, and determining integration revenue. The federal count identifies 14,901 prekindergarten, kindergarten, elementary, and secondary students identifying as American Indian students, or 1.7 percent of the total student population, enrolled in Minnesota’s K-12 public schools in the 2022-2023 school year.

Generally, classification as “American Indian” is considered a political, not racial, classification based on American Indian Tribes’ status as governmental and political entities.

K-12 American Indian Education School Options

American Indian students attend public schools, private schools, schools operated by the federal Bureau of Indian Education (BIE), and Tribal contract schools.

Most American Indian students in Minnesota attend public schools operated by Minnesota’s school districts and charter schools. Approximately one-third of these American Indian students attend public school in the seven-county metropolitan area and two-thirds of the students attend public school in Greater Minnesota. American Indian students also attend federally funded Tribal schools located on the Fond du Lac, Mille Lacs, White Earth, and Leech Lake reservations and nonpublic schools.

Total American Indian Enrollment 2021-2022 School Year

School	Total All Students	Federal Count American Indian Students	% of Students who are American Indian (Federal)	% of Total American Indian Student (Federal)	State Count American Indian Students	% of Students who are American Indian (State)	% of Total American Indian Students (State)
School Districts	796,518	13,786	1.7%	88.7%	24,944	3.1%	90.9%
Charter Schools	66,480	945	1.4%	6.1%	1,601	2.4%	5.8%
BIE Schools	635	635	100.0%	4.1%	635	100.0%	2.3%
Cooperative Units	7,508	170	2.3%	1.1%	249	3.3%	0.9%
State Totals	871,141	15,536	1.8%	100.0%	27,429	3.1%	100.0%

House Research Department

American Indian students can also, like other students, meet compulsory instruction requirements by attending nonpublic schools, including homeschools.

School Districts

In the 2021-2022 school year, there were 329 independent, common, and special school districts in Minnesota. School districts are governed by elected school boards, and operate traditional elementary and secondary schools, as well as area learning centers and other alternative programs, within their geographic boundaries. All of Minnesota's reservation land is within public district borders.

**School Districts with the Most American Indian Students
2021-2022 School Year Based on the State Count**

Rank	District	Total Students	State Count American Indian Students	% of District Students who are American Indian	District Students as a % of State Total American Indian Students

Source: Minnesota Department of Education

House Research Department

Some school districts with large American Indian populations have developed programs with a particular focus on American Indian culture and language. Three such programs are noted below.

St. Paul School District. St. Paul serves 4.5 percent of Minnesota's American Indian students. The American Indian Magnet School serves students in a prekindergarten program, and in grades kindergarten through 8. The school was founded with a goal of providing an American Indian perspective and to welcome students of all backgrounds to a diverse school community. Students in grades six to eight are required to study either the Lakota or Ojibwe language.

Minneapolis School District. The Minneapolis School District serves 6.1 percent of Minnesota’s American Indian students. In 2006, the district signed a memorandum of agreement with the Metropolitan Urban Indian Directors to improve the education of American Indian students in the district. The agreement has been renewed periodically; the most recent agreement went into effect on January 1, 2022. Under the agreement, the district must designate four American Indian Best Practice school sites, and four American Indian Pathways school sites. The Best Practice sites are “intended to demonstrate the integration of culture and academic rigor, and to provide examples for replication in other schools,” while the Pathway sites provide language and culture offerings that are less immersive than the Best Practice sites.¹

The Best Practice sites are: Anishinabe Academy, South High School All Nations, Takoda Prep of AIOIC (American Indian Opportunities Industrialization Center), and Nawayee Center School. The latter two are contract alternative programs run by community agencies; students in the programs must qualify for the graduation incentives program,² and continue to be Minneapolis public school students while enrolled at the contract alternative schools. The pathway sites are: Northeast Middle School, Sanford Middle School, Edison High School, and South High School.

Duluth School District. The Duluth School District serves 2.2 percent of Minnesota’s American Indian students. Students in grades kindergarten to 5 at Lowell Elementary may participate in the Misaabekong Ojibwe Language Immersion program. The program supports academic and linguistic development in English and Ojibwe.

Pine Point School. The Minnesota Legislature statutorily granted the White Earth Reservation Tribal Council control of the Pine Point public school, kindergarten through grade 8, and funds the school on a per pupil basis through state aid payments. The school is also eligible to receive federal aids and grants, as well as the same aids, revenues, and grants that local school districts receive.³ The school provides American Indian children with a supportive educational environment that integrates Ojibwe culture and history into the school’s curriculum and teaching practices. The Tribal council has the same powers and duties as a school board (other than the power to levy a property tax). It may cooperate with other school districts to purchase or share education-related services. The school is subject to the same standards for instruction as other public schools.

Charter Schools

A charter school is a public school established under a contract between a charter school board of directors and an authorizer. A charter school must comply with some state requirements as though it were a district, but is exempt from school district requirements that are not explicitly applicable to charter schools. Charter schools cannot limit admissions based on race, ethnicity, or membership in an American Indian Tribal nation, but they can adopt a mission that affirms or integrates particular cultural beliefs.

In the 2021-2022 school year, there were approximately 180 charter schools in Minnesota, including several with an explicit focus on American Indian culture. The tables below list the charter schools with the highest number, and highest concentration, of American Indian students.

**Charter Schools with the Most American Indian Students

Federal Laws and Programs Affecting Indian Education

The Bureau of Indian Education

The Bureau of Indian Education (BIE) was established in 2006 and operates within the Department of the Interior. The BIE was previously known as the Office of Indian Education Programs, and was part of the Bureau of Indian Affairs (BIA). The BIE's mission is to "provide quality education opportunities from early childhood through life in accordance with the Tribes' needs for cultural and economic well-being in keeping with the wide diversity of Indian Tribes and Alaska Native villages as distinct cultural and governmental entities."⁴ The BIE must also "manifest consideration of the whole person, taking into account the spiritual, mental, physical, and cultural aspects of the person within family and Tribal or Alaska Native village contexts."⁵

The BIE school system includes 183 elementary and secondary schools, and dormitories in 23 states. Students who attend BIE schools must be members of federally recognized Tribes or their descendants and reside on or near federal Indian reservations. Schools funded by the BIE are operated by the BIE or by Tribes under contracts or grants. BIE-operated schools are federally funded by a weighted funding formula designed to provide additional services to eligible students and annual formula grants from the U.S. Department of Education.

BIE Tribal Contract Schools

The federal government began establishing Indian schools in the 1870s,⁶ implementing a federal policy of acculturating and assimilating American Indian people through a system of BIA-run boarding schools.⁷ In 2021, the Department of the Interior began an investigation into the federal Indian boarding school system. The first report of the Federal Indian Boarding School Initiative Investigative Report was issued in 2022.⁸ The report identified 408 boarding schools across 37 states or then-territories, operated or supported between 1819 and 1969, including 21 in Minnesota.⁹

In the 1960s, Tribes started contracting with the federal government to manage the BIA-funded schools, and in 1975, Congress passed the Indian Self-Determination and Education Assistance Act,¹⁰ which encouraged more Indian Tribes to contract with the government to control BIA schools. In 1988, Congress passed the Tribally Controlled Schools Act.¹¹ Under the act, the federal government provides schools grants to "assure maximum Indian participation in the direction of educational services" and make the services "more responsive to the needs and desires of Indian communities."¹²

Today, 130 of the 183 BIE-funded schools are Tribally controlled and known as "Tribal contract" or "contract" schools. The remaining 53 are directly operated by the BIE.¹³ In Minnesota, Indian Tribes have contracted with the BIE to manage schools on the Leech Lake, White Earth, Fond du Lac, and Mille Lacs Indian Reservations. These schools are designed to provide American Indian students with educational services that are more responsive to the needs and desires of the Indian communities. Under the Public Health and Welfare Act,¹⁴ the federal government assists Tribal contract schools with public health services.

The curriculum and educational accountability requirements in BIE-operated schools are the same as those of the state where the BIE schools are located and include requirements under the federal Every Student Succeeds Act and the Individuals with Disabilities Education Act.

Minnesota's Tribal Contract Schools; 2021-2022 School Year

School	Total Students	American Indian Students	% American Indian	% of Total American Indian Students (State)
Fond Du Lac Ojibwe (Fond du Lac)	181	181	100.0%	0.7%

Total BIE Students	635	635	100.0%	2.3%

House Research Department

Head Start and Early Head Start

Head Start, including Early Head Start, is a federal program designed to provide comprehensive family-oriented programming that improves school readiness and social competence of children from birth to five years old from low-income families.¹⁵ Congress appropriates money to Head Start, which is awarded to community organizations. A portion of the federal appropriation is set aside for American Indians and Alaska Natives and is awarded to Tribal governments. The state also appropriates money for Head Start. The money is appropriated to MDE, which distributes the state appropriation among the community organizations that receive federal Head Start funding.

In Minnesota, there are 34 community organizations designated as Head Start grantees that receive federal and state Head Start funding. The 34 Head Start grantees include eight Tribal governments: Bois Forte, Fond du Lac, Grand Portage, Leech Lake, Lower Sioux, Mille Lacs, Red Lake, and White Earth. Roughly 10 percent of Minnesota's total state and federal Head Start funding is provided to the Head Start programs operated by the eight Tribal government recipients. In state fiscal year 2022, the eight Tribal governments collectively received about \$14.9 million from the federal government and \$2.4 million from the state, which funded Head Start programming for approximately 1,170 children.¹⁶

The Elementary and Secondary Education Act

The Elementary and Secondary Education Act (ESEA)¹⁷ was signed by President Lyndon Johnson in 1965, and was part of President Johnson's War on Poverty. The ESEA has been periodically reauthorized since then. The two most recent reauthorizations were known as No Child Left Behind, signed in 2002, and the Every Student Succeeds Act (ESSA), signed in 2015. ESSA requires states to submit plans to the U.S. Department of Education, explaining how they will

meet the minimum criteria of the law. Within ESSA, Title I is the single largest source of federal education funding, providing financial assistance to districts with high numbers or concentrations of students from low-income families. Title I also has a number of substantive requirements relating to assessments, accountability, and school support and improvement. Other parts of the law relate to instruction, English learners, American Indian students, and homeless children and youths, among others. A summary of the provisions most relevant to American Indian students follows.

Meaningful Consultation. ESSA requires states and school districts to consult with Indian Tribes when implementing ESSA. States must consult with representatives of Indian Tribes when they develop their state plans. In addition, a district that receives more than \$40,000 under Title VI or has at least 50 percent American Indian enrollment, must consult with Tribes when developing a plan or application for a program under ESSA. The consultation requirement also applies to individual schools with at least 50 percent American Indian enrollment. Consultation must provide enough opportunity for officials from Indian Tribes or Tribal organizations to meaningfully and substantively contribute to the plan.¹⁸

Title VI. ESSA authorizes formula grants to local education agencies that enroll at least ten American Indian students or whose enrollment is at least 25 percent American Indian, to Indian Tribes or organizations, and to schools operated or funded by the BIE. The Indian education formula grants are intended to fund programs that meet the culturally related academic needs of Indian children. In addition, Title VI authorizes competitive grants to improve educational opportunities and achievement of American Indian children and youth, and to support professional development for Indian teachers and education professionals. Title VI funds may be used to fund native language immersion programs.

Title VII. The Impact Aid program¹⁹ under Title VII authorizes funding for general operating expenditures and school construction costs through the U.S. Department of Education to compensate local school districts for large amounts of nontaxable federal Indian land located within the district. Impact aid recipients must ensure that Indian Tribes and parents participate in planning and operating district education programs. The program includes a grievance process that allows American Indian Tribes and parents to try to ensure they participate as intended.

State Revenue Streams and Programs

Beginning in the 1970s, Minnesota funded several grant programs, including the Postsecondary Preparation Program and the American Indian Language and Culture Program, to support American Indian students enrolled in public schools and in federal BIE-funded schools. In 2000, a newly combined state-funded Success for the Future program provided annual competitive grants to a limited number of school districts and schools eligible to receive the same grant amount, regardless of district size or number of enrolled American Indian students.

American Indian Education Aid

In 2015, the legislature replaced the Success for the Future grants with the American Indian Education Formula Aid program. The aid program is directed to all school districts, charter schools, and Tribal contract schools operating an American Indian education program and serving more than 20 American Indian students.²⁰

To qualify for the aid, the qualifying school must develop and submit a plan to the Indian education director at the Minnesota Department of Education. The program helps educators meet the needs of American Indian students and provides new and continuing programs, services, and activities to American Indian students, consistent with the requirements of the World's Best Workforce²¹ and the Indian Education Act of 1988.²² Permissible aid program expenditures include student and staff support services, innovative teaching and student evaluation, career counseling, and culturally competent instruction, among other expenditures, all of which must help increase the completion and graduation rates for American Indian students. American Indian education aid is funded on a per-pupil basis based on the legacy count of American Indian students. For fiscal year 2022, 156 school districts, four Tribal schools, and 17 charter schools qualified for American Indian Education Aid totaling \$11.5 million.

Indian Teacher Preparation Grants. The American Indian teacher preparation program assists American Indian people who intend to become teachers through grants to cooperative programs between school districts and colleges and universities. Grants are statutorily prescribed to: the University of Minnesota at Duluth and the Duluth school district; Bemidji State University and Red Lake school district; Moorhead State University and one of the school districts located within the White Earth Reservation; and Augsburg College and Minneapolis school district and St. Paul school district. Grant money may be used for programs, student scholarships, and student loans.²³

Tribal Contract School Aid. Minnesota pays Tribal contract school aid to the four Tribal contract schools in the state. The Tribal contract schools must comply with Minnesota's education statutes, and state aid must supplement, not replace, funds provided by the federal government. State aid for Tribal contract schools is allocated on a per-pupil basis, and intended to make up the difference between what the federal government provides and the per-pupil funding the state provides to school districts and charter schools.²⁴

Tribal contract schools that receive state aid are also eligible for early childhood family education (ECFE) revenue. For school districts, ECFE funding is based on a statutory allowance times the population that resides in the school district from birth to age 5. The total ECFE funding for Tribal contract schools in contrast is set at a fixed amount, with the same proportionate share of the total allocated to each of the four Tribal contract schools.

Language Revitalization. Legacy funding has been provided to the Minnesota Indian Affairs Council for Dakota and Ojibwe language revitalization grants.²⁵ Recognized educational institutions and certain nonprofit organizations are eligible to apply for the grants.

Facility Support for Some School Districts with Low Property Tax Base. School districts located on Tribal reservations tend to have small property tax bases. As a result, these districts find it difficult or impossible to finance construction projects through conventional bond sales. The maximum effort school aid law allows a district with a small property tax base to receive a forgivable capital loan. This program has been used for several school construction projects in the Red Lake and Nett Lake school districts. The state finances the loans through bond sales. Maximum effort capital loans are forgiven if they are not paid within 50 years.²⁶ The loans to Red Lake and Nett Lake will be forgiven when the 50-year term is reached.

Indian Education Programs Fiscal Years 2022 and 2023 Appropriations

Program	Amount	
	2022	2023
American Indian Education Aid (Minn. Stat. § 124D.81)	\$11,351,000	\$11,775,000
Tribal Contract Schools (Minn. Stat. § 124D.83)	2,743,000	3,160,000
Indian Scholarships (Minn. Stat. § 136A.126)	3,500,000	3,500,000
Indian Teacher Preparation Grants (Minn. Stat. § 122A.63)	600,000	600,000
Tribal College Grants (Minn. Stat. § 136A.1796)	150,000	150,000
Early Childhood Programs at Tribal Schools (Minn. Stat. § 124D.83 , subd. 4)	68,000	68,000
Total	\$18,412,000	\$19,253,000

House Research Department

State Educational Policies and Student Outcomes

American Indian Education Act of 1988

The Minnesota Legislature passed the American Indian Education Act to provide American Indian people with education programs that meet their unique education needs. The act encourages districts and schools to provide elementary and secondary language and cultural education programs that include: instruction in American Indian language, literature, history, and culture; staff support components; research projects examining effective communication methods; personal and vocational counseling; modified curriculum, instruction, and administrative procedures; and cooperative arrangements with alternative schools that integrate American Indian culture into their curricula.

The act directs the Professional Educator Licensing and Standards Board to grant to eligible individuals teaching licenses in American Indian language and cultural education. Districts may seek exemptions from the licensing requirement if compliance would make it difficult to hire qualified teachers. Districts and schools that provide a language and cultural education program must try to hire persons who share the culture of the American Indian children enrolled in the program. American Indian schools and school districts in which there are ten or

more enrolled American Indian children must consult with a parent committee regarding curriculum that affects American Indian education and the educational needs of the students.

Under the act, a school district with at least ten enrolled American Indian children may retain an American Indian teacher who is a probationary teacher or who has less seniority than other, non-American Indian teachers the district employs when laying teachers off.²⁷

Tribal Nations Education Committee. The state education commissioner must consult with the Tribal Nations Education Committee (TNEC) on all issues related to American Indian education, including the administration of Minnesota's American Indian Education Act of 1988 and other American Indian education programs, American Indian scholarship and postsecondary preparation grant awards, and recommended education policy changes affecting American Indian students.²⁸

In 2019, Governor Walz issued Executive Order 19-4, requiring state agencies to implement Tribal consultation policies to guide their work and interaction with Minnesota Tribal Nations, among other things. The Department of Education issued its policy, and in 2020, issued the 2019 Minnesota State of Indian Education Report. The report provides data on educational outcomes of American Indian students and discusses factors that affect educational outcomes. The policy requires annual consultation with TNEC, as well as ongoing consultation.²⁹

American Indian Education Director. Minnesota Statutes requires the state education commissioner to appoint an Indian education director to: serve as a liaison with American Indian Tribes and organizations; evaluate the state of American Indian education in Minnesota; seek advice from the American Indian community and other persons interested in American Indian education on improving the quality of American Indian education in Minnesota; advise the commissioner on American Indian issues; develop a strategic plan and a long-term framework for American Indian education that is updated every five years; and keep the American Indian community informed about the work of the state education department.³⁰

Educational Outcomes of American Indian Students

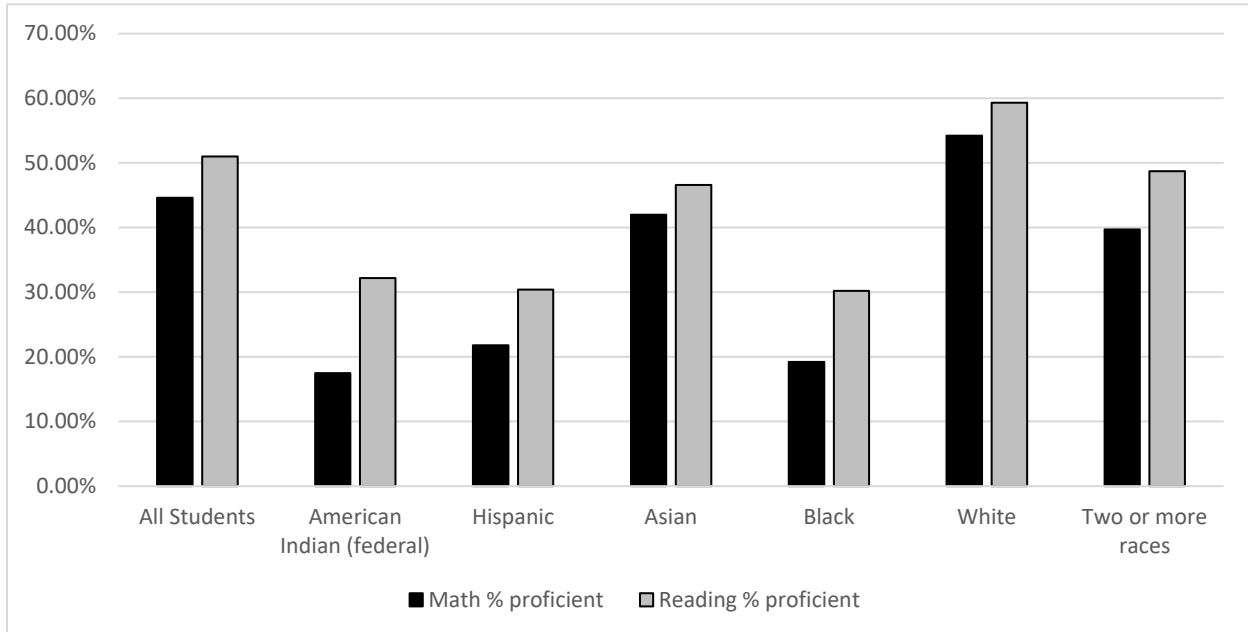

ESSA requires states to set goals for academic achievement and graduation rates, and to create accountability systems to measure progress toward state goals. Minnesota's accountability system, known as the North Star,³¹ uses the statewide reading and math Minnesota Comprehensive Assessments (MCAs), four- and seven-year graduation rates, and other indicators of school quality or student success.³² The next several sections provide an overview of how American Indian students perform on these indicators, along with other information about American Indian academic performance and student discipline.

Academic Assessments

American Indian students generally score lower on the MCAs than other student groups. The chart below shows the percentage of students in each group that meet or exceed state standards, as measured by the 2022 reading and math MCAs. Minnesota's reading achievement rate for all student groups in grades 3 to 8 and 10 was 51 percent; the math achievement rate was 44.6 percent. Based on the federal count, the reading achievement rate

for American Indian students was 32.2 percent, and the math achievement rate was 17.5 percent.³³

MCA Proficiency Rates 2021-2022 School Year

Source: Minnesota Department of Education

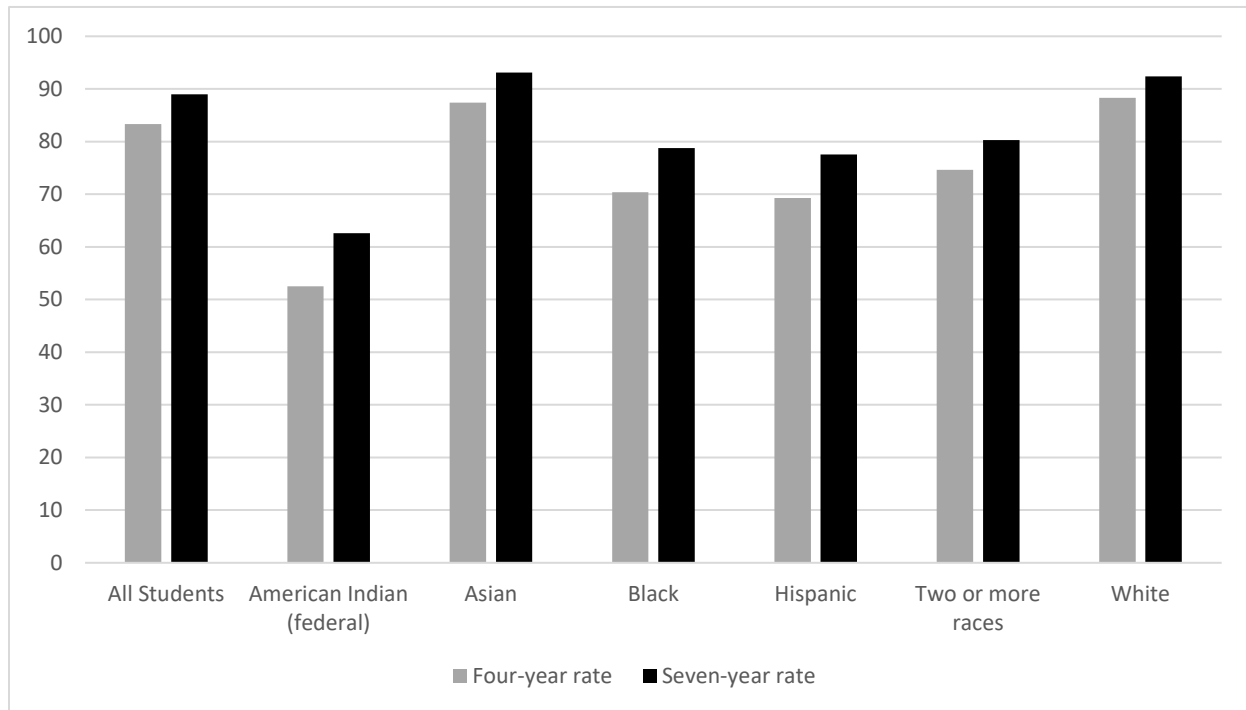

House Research Department

In addition to the MCAs, American Indian student performance is measured by the National Assessment of Educational Progress (NAEP), a continuing, federally mandated test of what students know and can do in math, reading, science, writing, and other subjects. The National Center for Education Statistics administers the test using a sampling procedure that captures the diversity of U.S. schools and students. NAEP results make possible state and district comparisons of student academic progress over time. NAEP data on student achievement are reported for different demographic groups, including socioeconomic status and race/ethnicity. American Indian students consistently score lower on the NAEP 4th and 8th grade reading and math assessments than the national average for non-Indian students.³⁴

Graduation Rates

American Indian students graduate at lower rates than other students in Minnesota. In 2021, 83.3 percent of all Minnesota students graduated in four years, and 89 percent graduated in seven years. For American Indian students, the four-year rate was 52.5 percent, and the seven-year rate was 62.6 percent.

Graduation Rates, 2021

Source: Minnesota Department of Education

House Research Department

Other Academic Indicators

American Indian students are underrepresented in the Minnesota Postsecondary Enrollment Options (PSEO) program and among Advanced Placement (AP) and International Baccalaureate (IB) exam takers.³⁵ High school students who participate in PSEO earn college credit without having to pay college tuition and fees.³⁶ Students who take AP courses may take AP exams to qualify for college credit. Some high schools offer an International Baccalaureate program, which allows students with qualifying IB scores to receive college credit. Minnesota subsidizes the cost of AP and IB exam fees for low-income students, and provides scholarships for teachers attending AP or IB training.³⁷

Student Discipline

American Indian students accounted for 6.1 percent of all kindergarten through grade 12 disciplinary actions across the state in the 2021-2022 school year. Discipline rates varied widely in the past few school years; for context, the chart below shows disciplinary actions across the state, by reported racial or ethnic group for three school years.³⁸ A disciplinary action is defined as an out-of-school suspension for one day or more, expulsion, or exclusion.

Disciplinary Actions by Race/Ethnicity 2020-2021 School Year

Note: The bar graph makes it look like there were 0 disciplinary actions for Asian students in 2020-2021, but there were 86.
Source: Minnesota Department of Education

House Research Department

Special Education

Minnesota’s American Indian students are identified as special education students at a much higher rate than students of other races/ethnicities. The tables below show that 27.7 percent of Minnesota’s American Indian students are identified in one of Minnesota’s 13 disability categories,³⁹ and compares identification rates by the most common disability categories.

Percent of Special Education Students by Race/Ethnicity; 2021-22 School Year

	Special Education Students	Total Students	% of Students in Special Education
Asian	6,357	60,461	10.5%
Black	17,188	101,388	17.0%
Hispanic	17,733	91,601	19.4%

	Special Education Students	Total Students	% of Students in Special Education
American Indian	4,135	14,901	27.7%
Two or More Races	10,504	52,028	20.2%
Hawaiian/Pacific Islander	126	890	14.2%
White	91,020	549,237	16.6%
Total	147,063	870,506	16.9%

Curriculum

The state education commissioner must include the contributions of Minnesota’s American Indian Tribes and communities when reviewing and revising state academic standards.⁴⁰ All school districts and charter schools must provide students instruction in accordance with the state academic standards. World language and culture programs must encompass indigenous American Indian languages and cultures.⁴¹

Minnesota's School Desegregation/Integration Rule

In 1973, the Minnesota Board of Education (which before 2000 was the rulemaking and policy-making body for the Department of Education) adopted desegregation rules based on comparisons of minority student enrollment among schools within the same district. In 1978, the rules were amended to specify that segregation occurred when the minority student population in any school building exceeded the minority racial composition of the student population for the entire district by 15 percent. Schools that were found segregated based on the 15 percent standard had to submit for approval a comprehensive plan to eliminate segregation. The substance of the rules remained the same through the 1970s and 1980s. New rules were adopted in 1999, which remain in place.

Under the 1999 rules, the commissioner uses data on the racial composition of each school to determine whether "segregation" exists, whether there is a "racially identifiable school" within a district, and whether the district as a whole is "racially isolated." Each of these terms is defined in the rule. If the commissioner determines that a racially identifiable school exists, the commissioner must determine whether the racial composition at the school is the result of acts motivated at least in part by a discriminatory purpose. If the commissioner finds that segregation exists, the district must submit a plan to remedy the segregation. The plan must include programs that provide instruction about different cultures, including options such as American Indian language and culture programs that are uniquely relevant to American Indian students.⁴²

For purposes of developing a school or school district desegregation plan under the state rules, the definition of segregation does not include a concentration of enrolled American Indian students that (1) exists to meet the students' unique educational needs through federal education programs, and (2) is voluntary on the part of the parents or students or both.⁴³

The 2013 Legislature adopted a new achievement and integration program⁴⁴ for pursuing racial and economic integration, increasing student achievement, and reducing academic disparities in K-12 public schools. To ensure that the new program and the underlying school desegregation rules conformed, the legislature directed the education commissioner to review the rules for consistency with the new statutory program and, if needed, to recommend rule and statutory amendments.⁴⁵ In 2015, the department began the rulemaking process to amend the achievement and integration rules. After a hearing on the rules, an administrative law judge issued a report disapproving certain proposed rules. The department withdrew the proposed rules and concluded the rulemaking process. Prospective changes in the substance of the school desegregation rules may affect American Indian students.

- ³¹ The Minnesota Report Card displays information used in the North Star system and is available at <http://rc.education.mn.gov/#mySchool/p--3>.
- ³² ESSA also requires states to set goals for English-language proficiency; Minnesota uses the ACCESS test to measure English learner progress, and includes ACCESS performance data in the North Star system. Minnesota's original state plan used consistent attendance (the percentage of students in a student group who are not chronically absent) as its indicator of school quality or student success. For the 2021-2022 school year only, Minnesota used an indicator based on enrollment maintenance from 2020-2021 to 2021-2022 instead of consistent attendance. Minnesota's amended state plan, submitted for federal approval in 2022, adds measurements of career- and college-readiness coursework, and a well-rounded education, beginning in 2023-2024, or as data are available and reliable.
- ³³ Based on the state count, 27.2 percent of American Indian students were proficient in reading, and 22.4 percent were proficient in math.

Postsecondary Education Laws Affecting Indian Students

by Nathan Hopkins (651-296-5056)

Enrollment Data and Notable Postsecondary Institutions

American Indian students attend every type of postsecondary institution in Minnesota. Cumulatively, American Indian students represent 0.8 percent of enrolled undergraduate students statewide, and 0.7 percent of the state's total postsecondary enrollment. For context, American Indians represent between 1.1 to 1.9 percent of the state's total population. Below is a table showing the institutions with the largest populations of enrolled American Indian undergraduates using fall 2019 enrollment data from the Minnesota Office of Higher Education.¹

Largest Enrollment of American Indian Students in Postsecondary Institutions, Fall 2019

Institution	Number of American Indian Students	American Indian Students as % of Total Undergraduate Enrollment
Leech Lake Tribal College	144	92%
Bemidji State University	122	3
Red Lake Nation College	121	100
University of Minnesota - Morris	116	8
Fond du Lac Tribal & Community College	109	18
White Earth Tribal & Community College	98	83

Source: Minnesota Office of Higher Education

House Research Department

Represented in the table above are Minnesota's **three Tribal colleges**: White Earth Tribal and Community College (est. 1997), Leech Lake Tribal College (est. 1990), and Red Lake Nation College (est. 1987). A Tribal college is a postsecondary institution established and governed by an American Indian Tribe.

In addition to the three traditional Tribal colleges is **Fond du Lac Tribal and Community College** (est. 1987). Fond du Lac Tribal and Community College is unique in that it operates under a joint governance model between the Fond du Lac Band of Lake Superior Chippewa and the Board of Trustees of the Minnesota State Colleges and Universities (Minnesota State) system. Unlike the other three Tribal colleges, Fond du Lac is therefore a part of the Minnesota State system and considered a state institution.² Accordingly, the state provides operational funding to Fond du Lac as part of the broader operations appropriation to the Minnesota State system.

All four Tribally affiliated colleges in Minnesota have been given federal land-grant status by the U.S. Congress under the Equity in Education Land-Grant Status Act of 1994, making them eligible for limited federal funds to advance agriculture and the mechanic arts.³ The three traditional Tribal colleges also receive more significant operational funding from the federal government under the Tribally Controlled Colleges and Universities Assistance Act of 1978 (TCCUAA).⁴ Because federal funding under the TCCUAA is based only on the number of Indian students enrolled at an institution, Minnesota provides additional operational support to the three traditional Tribal colleges under the Tribal College Supplemental Grant program,⁵ which provides state funds based on the number of non-Indian students enrolled at the institution.

The **University of Minnesota's Morris campus** is not affiliated with any particular Tribe, but it has a unique mission and history regarding American Indian students. In the late 19th century, the campus housed an American Indian boarding school. That boarding school closed in 1909, and the federal government (which was operating the school at that point) transferred the campus to the state with the requirement that a school be maintained and that "Indian pupils be admitted free of charge for tuition and on terms of equality with white pupils."⁶ In 1960, Morris became a four-year liberal arts college within the University of Minnesota system, and, in 1961, the legislature renewed and codified its commitment that tuition would remain free for American Indian students.⁷

Degree/Credential Attainment Data

Minnesota's Office of Higher Education tracks postsecondary credential attainment as required by a law setting a higher education attainment goal for the state.⁸ That attainment goal provides that, by 2025, at least 70 percent of Minnesota residents ages 25 to 44 should hold a postsecondary degree or certificate. The law also sets benchmark goals of 30 percent and 50 percent for each race or ethnicity group.

Current estimates by the Minnesota Office of Higher Education show that, of all Minnesotans aged 25 to 44, 62.5 percent have completed a postsecondary certificate or degree.⁹ But, as shown in the chart below, significant attainment gaps exist when this general population is broken down by racial and ethnic groups. American Indians have the lowest attainment percentage at 28.6, which closely trails Hispanics at 29.2 percent—below the first benchmark of 30 percent.¹⁰

Percentage of Minnesotans, Age 25-44, with a Postsecondary Credential, 2021 Estimates by Race Group

The Office of Higher Education estimates that, in order to meet the 70 percent attainment goal by 2025, 108,500 more Minnesotans age 25 to 44 must earn a credential. Of these persons, around 6,100 should be American Indians.¹¹

State-level Policies and Programs

Unique Needs and Abilities of American Indian People¹²

This law applies to Minnesota's public postsecondary institutions. It has three components:

- 1) It requires the formation (upon request of ten or more full-time American Indian students) of an advisory committee with Tribal representatives that will recommend programs and services to meet the needs of American Indian students.
- 2) It provides that knowledge of American Indian languages be given the same treatment as other non-English languages for purposes of academic credit, assessment, and course placement.
- 3) It requires an individual's knowledge of American Indian language, history, and culture to be considered in assessing the individual's competence to provide instructional or noninstructional services specific to American Indian peoples.

Community and Commissioner Participation in Postsecondary Education of American Indians¹³

Requires the Office of Higher Education to consult with the Tribal Nations Education Committee and other American Indian stakeholders on matters regarding postsecondary education of American Indian students.

Indian Scholarships¹⁴

This law establishes a scholarship program for Minnesota residents who attend a Minnesota postsecondary institution and who are either enrolled in a federally recognized Tribe or are of one-quarter or more Indian ancestry. The maximum award amounts are \$4,000 per academic year for undergraduate students, and \$6,000 per academic year for graduate students. Awards take into account an applicant's demonstrated financial needs and other financial aid received.

The biennial appropriation for this program has been \$7 million for the past four biennia.

Tribal College Supplemental Grant Assistance¹⁵

This law provides operational funding to Minnesota's Tribal colleges based on the number of non-American Indian students attending. This is intended to supplement the federal funding received under the TCCUAA,¹⁶ which is based only on the number of American Indian students attending the institution. This program began in 2013.

The biennial appropriation for this program has been \$300,000 since its inception.

Fond du Lac Campus¹⁷

The Fond du Lac Tribal and Community College within the Minnesota State College and University System has a unique mission to serve the needs of American Indians. The law also allows the college to offer a four-year baccalaureate program in elementary education, which is unique among Minnesota's community colleges, which only offer certificates and two-year degrees.

Morris Branch¹⁸

Under state law, the Morris branch of the University of Minnesota is required to offer free tuition to American Indian students.

University of Minnesota Native American Promise Tuition Program

While not a legally required program, the University of Minnesota began its Native American Promise Tuition Program in the fall 2022 semester. The program provides need-based financial support—up to free tuition—to first-year undergraduate students and transfer students from Minnesota's Tribal colleges (including Fond du Lac) who are enrolled citizens in one of Minnesota's 11 federally recognized Tribal Nations.

Elections, Voting Rights, and Civic Engagement

by Matt Gehring (651-296-5052)

In general, members of Tribes who meet all other eligibility requirements may participate in federal, state, and local elections—as candidates, as voters, and as advocates on ballot issues.

Tribal members (and Tribes themselves) may also participate in other aspects of the civic process, such as engaging in public debate, advocacy, and lobbying public officials on policy issues. Some of these activities may require registration and reporting under federal and state laws.

The rights of a Tribal member to engage and participate in Tribal elections are governed exclusively by Tribal law; those rights are not provided for or regulated by federal or state law.

Eligibility to Vote

Tribal members may vote in federal, state, and local elections in Minnesota, provided all other eligibility requirements are met. To be eligible to vote, a person must be:

- a United States citizen;
- at least 18 years of age on election day; and
- a resident of Minnesota for at least 20 days.

A person who has previously been subject to a felony sentence is eligible to vote if he or she has completed all parts of the sentence. A person who has been declared legally “incompetent” by a court is not eligible to vote.¹

Use of Tribal identification in election day voter registration

Members of federally recognized Tribes may register to vote on election day using their Tribal identification card, if the card includes the member’s name, current address, signature, and photograph. If the Tribal member’s identification includes all of those items except a current address, the Tribal member may register to vote using the identification card along with other proof of residence.²

A current listing of the documents that may be used to prove residence is available through the Office of the Minnesota Secretary of State, or online at: www.sos.state.mn.us/elections-voting/.

In 2004, Minnesota’s laws governing the use of Tribal identification cards for the purpose of election day voter registration were subject to a legal challenge. The legislature later amended the law to incorporate the content of two court orders resulting from that challenge. The current law remains consistent with those orders.

Polling places on Tribal lands

Many reservation lands in Minnesota include at least one designated polling place for purposes of voting in federal, state, and local elections.

Eligibility to Hold Public Office

A Tribal member may hold any elected or appointed public office in Minnesota, as long as any other eligibility requirements for the office are met. These requirements include eligibility to vote, and certain age and residency standards, all of which are provided in the Minnesota Constitution.³

The eligibility requirements for holding federal offices, such as president of the United States, and United States senator or representative, are provided by the United States Constitution and are not regulated by state law.

Campaign Finance and Political Contributions

Tribes and individual Tribal members may make contributions and expenditures to support candidates for state and local public office, or to advocate on behalf of, or against, ballot questions. These contributions and expenditures must comply with the general laws governing campaign finance and campaign finance reporting.⁴

Members of the House are prohibited from soliciting or accepting a contribution from a Tribal organization during a regular or special session of the legislature.⁵

When advocating for or against candidates for federal office, Tribes and Tribal members are subject to campaign finance and reporting requirements as provided in federal law. For more information on federal campaign finance laws, see the website of the Federal Election Commission at: <http://www.fec.gov/>.

Lobbying and Advocacy

Tribes and Tribal members may engage in advocacy on public policy issues being considered by state and local governments.

Depending on the nature of the activity, the Tribe or Tribal member may need to register with the Minnesota Campaign Finance and Public Disclosure Board as either a “lobbyist” or as a “principal.” In addition to registration, lobbyist and principals must submit periodic disclosure reports to the board. Many Tribes located in Minnesota are currently registered as principals.⁶

In general, lobbyists and principals may not give gifts to public officials, employees of the legislature, or local officials of a metropolitan government unit.⁷

More information on the types of activities that trigger registration and reporting requirements under state law is available from the Minnesota Campaign Finance and Public Disclosure Board online at: <https://www.cfb.mn.gov/>

Lobbying and advocacy activity before Congress and federal agencies are subject to registration and reporting as provided in federal law.

Election District Boundaries

The Minnesota Constitution requires that new districts for the state legislature and the state's representatives in Congress be drawn after each federal decennial census. The most recent federal census was conducted in 2020. Following that census, a Special Redistricting Panel appointed by the Minnesota Supreme Court ordered new district boundaries.

Among the issues considered by the panel in drawing the districts was the impact of the new district boundaries on the reservation lands of each federally recognized Indian Tribe. The principle used by the panel required contiguous reservation lands to be preserved, allowing divisions of a reservation into multiple districts only when necessary to meet other constitutional requirements.⁸

Appendix II: Demographic and Other Information about Minnesota’s Indian Reservations

Bois Forte	145
Fond du Lac.....	147
Grand Portage.....	150
Leech Lake.....	152
Lower Sioux.....	155
Mille Lacs.....	157
Prairie Island	160
Red Lake.....	162
Shakopee-Mdewakanton.....	165
Upper Sioux.....	167
White Earth.....	169

This appendix includes information and certain demographic data about Minnesota’s 11 federally recognized Indian reservations and contact information for the Minnesota Chippewa Tribe, an umbrella organization for some of the northern Ojibwe Tribes in Minnesota. Following is a brief description of certain terms and concepts used in this appendix.

Note: Maps of reservations on the following pages are from the U.S. Census Bureau, using federal definitions of American Indian areas. These census maps do not align with legal definitions of reservation boundaries and are used in this report as geographic illustrations.

Minnesota Chippewa Tribe Member: Indicates whether the reservation is a member of the Minnesota Chippewa Tribe. The Minnesota Chippewa Tribe is a federally recognized Tribal government that provides certain services and technical assistance to its six member reservations—Bois Forte, Fond du Lac, Grand Portage, Leech Lake, Mille Lacs, and White Earth. The Red Lake reservation is not included as a member reservation.

Adjacent County: Lists the counties in which the reservation is located.

Tribal Enrollment: Enrollment numbers are subject to frequent change due to deaths, births, new enrollments, and relinquishments of Tribal memberships. The numbers presented represent the most accurate count available at the time of publication. House Research collected enrollment numbers via direct phone contact with the enrollment offices of each Tribe and the Minnesota Chippewa Tribe in January and February of 2023. Because the House Research Department was unable to directly gather current enrollment numbers for some Tribes, enrollment numbers are listed for previous years.

Tribal Land/Individual Land/Government Land: Lists acreage information received from the Bureau of Indian Affairs (BIA) Midwest Regional Office in February of 2023. The BIA collected acreage data from the Trust Asset and Accounting Management System. “Tribal land” is land held in trust for the Tribe by the federal government.

Top Three Industries Employing Residents: Lists the three industries employing the largest numbers of reservation residents. Percentages reflect the percent of the civilian workforce

ages 16 and older employed in a given industry. These percentages include all residents of the reservation, not just enrolled members of the Tribe. Data was obtained from the U.S. Census Bureau's American Community Survey, five-year estimates for 2017 to 2021.

Totals for smaller reservations are not precise and have significant margins of error due to sampling error.

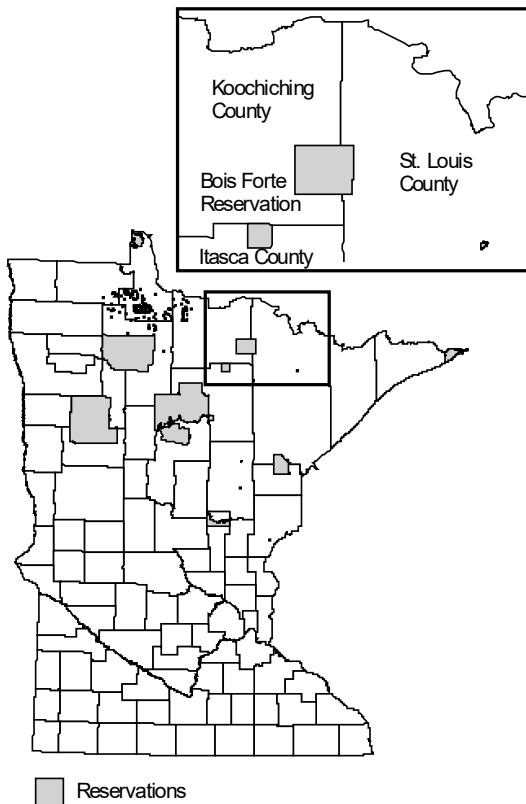

Tribal Governance: Lists basic information on the Tribal governance structure, as well as contact information for important Tribal leaders. Information was collected directly from Tribes.

Demographic Information: Provides information about a reservation, its adjacent counties, and the state, including:

- *Population and Percent American Indian:* The total population for the geographical area; the American Indian and Alaska Native population for the geographical area, alone or in combination with another race; the percentage of the geographical area's population represented by the American Indian population, and the share of the statewide total American Indian population.
- *Age:* Data on the age of the geographical area's population.
- *Economic and Income Data:* The median household income, the per capita income, the percentage of the population with incomes below the poverty level in the last 12 months, and the percentage of the population receiving cash public assistance in the last 12 months.
- *Labor:* Includes the percentage of the population aged 16 and older in the labor force, the percentage of the civilian labor force that is employed, and the percentage of the labor force that is unemployed.
- *Education:* Information about the educational attainment of the population age 25 and over in each geographical area, including the percentage with no high school diploma, a high school diploma only, some college with no degree or an associate degree, and a bachelor's or graduate degree.

House Research compiled all demographic information from the 2017-2021 American Community Survey five-year estimates. Data for adjacent counties was weighted by county population.

Appendix III: Secretary of the Interior's Authority to Acquire Land in Trust for Indian Tribes

The Indian Reorganization Act generally authorizes the Secretary of the Interior to accept transfers of land in trust for Indian Tribes and individual Indians.¹ Trust status transfers title to the federal government, in trust for the Tribe or individual Indian. Under federal law, the land is exempt from state and local property taxes. Fee lands owned by the Tribe, by contrast, are subject to property taxes.

The federal statute authorizes the secretary "in his discretion" to acquire land "for the purpose of providing land for Indians."² The statute itself provides no standard or restrictions on when transfers into trust may be accepted.

Agency regulations provide three circumstances in which the secretary may acquire land for a Tribe in trust status.

Each of these is an *independent or separate* basis for acquiring the land:

- The property is located in or adjacent to the reservation boundaries
- The Tribe already owns an interest in the land
- The secretary determines that acquisition of the land is "necessary to facilitate Tribal self-determination, economic development, or Indian housing"³

Agency regulations also provide the specific criteria that apply when the land is within or adjacent to a reservation, and the acquisition is not mandatory. For land on or adjacent to a reservation, the department looks at the following:

- Whether there is statutory authority for the acquisition
- The Tribe's need for the land
- The purpose for which the land will be used
- Impact on state and local governments of removing the land from the tax rolls
- Potential jurisdictional problems and conflicts of land use
- Whether the BIA can handle any administrative responsibilities that result from the acquisition
- The extent to which the Tribe provided information needed to comply with environmental law relating to hazardous substances⁴

For trust requests on land that is not adjacent to or on a reservation, the agency also considers:

- The location of the land and the distance from the existing reservation; and
- Anticipated economic benefits if acquired for business purposes.

The recently revised BIA rules require the state and local government to be notified when a Tribe requests land be taken into trust and allows the state and local government 30 days to

provide written comment to the BIA on how the acquisition will affect regulatory jurisdiction, real property taxes, and special assessments.⁵

Prior to the new rules, the process of taking land into trust was ambiguous.

The new federal regulations also clarify the agency decision-making process, clarify the appeal rights of applicants, clarify the procedure for judicial review, and provide that the trust transfer occurs immediately.⁶ The Supreme Court has ruled that the courts can overturn a trust transfer so the need to stay the transfer is no longer necessary. Recent changes have also updated the specific rules for title examination prior to the land to be taken into trust.⁷

In 1998 the Shakopee Mdewakanton Sioux Community requested the secretary to transfer a parcel of land into trust for the Tribe. The BIA regional officer declined the request, and there was no appeal. The decision provides some insight into the way in which the BIA may apply the regulations on trust transfers. Some of these insights include:

- The need for the trust status must be shown. It is not clear how this is to be done, but it seems likely that a Tribe could meet it by showing that the property tax exemption is an economic necessity for the stated purpose. The need for exemption from local regulations might also be relevant. The need for these exemptions must tie back to (1) fostering economic development or (2) supporting Tribal self-government.
- The BIA decision makes it clear that in measuring the effect on local tax bases, it will look only at the loss of current tax base, not any potential loss of future tax revenues.
- The decision also suggests that loss of tax base will be evaluated relative to the size of the local tax base. If it is a small share, it is unlikely to affect the application for trust status.

Events following the 1998 BIA decision underline the ambiguity involved with the rules for accepting trust transfers for Indian Tribes, such as Shakopee Mdewakanton Sioux. In 2000, the Tribe renewed its request to transfer the property into trust; this request involved 752 acres. State and local officials continued to object to the transfer. The BIA did not act upon this request for six years until July 2006 when the Midwest Regional office granted the request. The letter granting approval stated that federal law “does not include any type of evaluative factor to consider the wealth of the Tribe prior to bringing land into trust status.”⁸ However, one week later, the BIA director withdrew this decision on the grounds “it was issued prematurely.”⁹ Ultimately, the land was taken into trust for the Tribe.

In a U.S. Supreme Court decision, *Carcieri v. Salazar*,¹⁰ the Court found that a plain reading of the Indian Reorganization Act prevents land from being taken into trust for a Tribe that was not “under federal jurisdiction” in 1934, when the law was enacted. This created a broad restriction for many Tribes and uncertainty about which Tribes could take land into trust. Since then, federal courts have found that the Tribe could have been “under federal jurisdiction” without being federally recognized.^{11,12} There has been proposed congressional legislation to “fix” the *Carcieri* decision and clarify how the law will be applied. While Congress has not yet amended the IRA to provide clarity on this issue, the Department of Interior indicated in a

memo issued in 2014, a two-part legal analysis would be used by the department to determine whether or not a Tribe was under federal jurisdiction in 1934.¹³
