**Preschool - 12th Grade Enrollment:**

Included in these counts are students who were enrolled over October 1 of the school year.

Grade Pre-kindergarten through grade 12 are included in the counts.

Excluded from the counts are shared-time students, adult students, and students attending in other states or nonpublic schools for care and treatment purposes. Dual enrolled students are counted only once, usually at the regular school of enrollment.

**Demographics Table 10: 2012 Child Subjects of Maltreatment Reports per 1,000 in the Child Population (0-17 years old)**

Note: Investigation is a unique count of children in Family Investigations or Facility Investigations.

\*These numbers represent the 2010 U.S. Census for children residing on the Leech Lake and White Earth reservations and who indicated "American Indian" alone or as one of two or more races.

The Leech Lake reservation has land in Cass, Itasca, Beltrami and Hubbard counties. The White Earth reservation overlaps Mahnomon, Becker and Clearwater counties.

## Section C: Mortality

### Tables

---

**Mortality Table 1: Summary of Deaths to Minnesota Residents**

**Mortality Table 2: Number of Deaths by Age Group**

**Mortality Table 3: Age-Specific Death Rate**

**Mortality Table 4: Minnesota's 10 Leading Causes of Death**

**Mortality Table 5: Premature Deaths**

## **Mortality Introduction**

The mortality section of the Minnesota County Health Tables provides data on deaths to residents of Minnesota including number of deaths, crude death rates, age-adjusted death rates, age-specific death rates, the 15 leading causes of death and premature death rate by top 10 leading causes of death. All data are for presented for the most current year with the exception of the premature deaths; due to small numbers of deaths a 5-year grouping is provided. This introduction provides an overview of death (mortality) statistics, how deaths rates are calculated and how to use these statistics.

### **Crude Death Rate**

A crude death rate is a good measure of the overall magnitude of mortality in a population. The crude rate is useful information for some purposes, such as planning for the delivery of health care services. One should be cautious when comparing a crude death rate over time or to another county or Community Health Board (CHB) and be aware that differences in the crude rate may be due to an older populations.

A crude death rate is simply the number of deaths divided by the total population, often multiplied by some constant so that the result is not a fraction (for death rates 100,000 is the most commonly used multiplier).

Mortality Table 1 includes crude death rates for the state of Minnesota, its counties and community health boards.

### **Age-specific death rates**

An age-specific death rate is useful in understanding the influence each age group has on the overall crude death rate. Mortality Table 3 shows age-specific death rates for the state of Minnesota, its counties and CHBs, using eight common age groupings. Note that the death rate for ages 0-4 is substantially higher than the death rates for the other younger age groups (primarily due to a high death rate during infancy); only at ages 45-54 does the death rate exceed that for ages 0-4. It can be immediately seen that the death rates are many times higher in the oldest age groups. Therefore, county or CHB with an older population will automatically have a higher overall death rate just because of the age distribution.

An age-specific death rate is the number of deaths to an age group divided by the population for that age group, often multiplied by some constant so that the result is not a fraction (for death rates 100,000 is the most commonly used multiplier).

### **Premature Death Rate**

Almost 4 out of every 10 deaths to Minnesota residents occur to people under 75 years of age. Thus, it is also important to investigate deaths to younger Minnesotans. By examining premature deaths to younger persons, it may be possible to identify certain counties or CHBs were certain deaths that may be more prevalent among younger residents.

The premature death rate (PDR) for those under age 75 is the number of deaths to residents under age 75 per 100,000 persons age-adjusted to the 2000 U.S. standard population. For more information on PDRs go to: Pennsylvania Department of Health, Tools of the Trade, Premature Mortality Rates

<http://www.portal.state.pa.us/portal/server.pt?open=514&objID=556449&mode=2>

Tables 1 and 5 of the Minnesota County Health Tables include premature deaths to those under age 75, as well as a premature death rate (age-adjusted).

### **Age-adjusted Death Rates**

Age adjusting rates is a way to make fairer comparisons between counties/CHBs with different age distributions. For example, a county having a higher percentage of elderly people may have a higher crude death than a county with a younger population merely because the elderly are more likely to die. Age-adjusted death rates are used to eliminate this age bias in the makeup of the populations being compared, thereby providing a much more reliable rate for comparison purposes.

The age-adjusted rates provided in Mortality Tables 1 and 5 are calculated using the direct method of age adjustment. For more information on age adjusting death rates go to: Centers for Disease Control and Prevention, *Healthy People 2000 Statistical Notes, Direct Standardization (Age-Adjusted Death Rates)*

<http://www.cdc.gov/nchs/data/statnt/statnt06rv.pdf>

### **Additional Resources for Minnesota Death Data**

Minnesota Vital Statistics Interactive Queries Website

A query system that includes deaths by county, age, cause, gender and race/ethnicity

<https://pqc.health.state.mn.us/mhsq/index.jsp>

Minnesota Vital Statistics State, County, and Community Health Board Trend Reports

Reports include the 5-year rates for the cancer heart disease, stroke, and unintentional injury

<http://www.health.state.mn.us/divs/chs/trends/index.html>

Minnesota Injury Data Access System (MIDAS)

A query system of injury and violence data for Minnesotans by county, injury type, gender, outcome (fatal/non-fatal)

<http://www.health.state.mn.us/injury/midas/ub92/>

CDC Wonder

WONDER online databases utilize a rich ad-hoc query system for the analysis of public health data

<http://wonder.cdc.gov/>

For more data on deaths in Minnesota go the Minnesota Vital Statistics Interactive Queries Website:

<https://pqc.health.state.mn.us/mhsq/index.jsp>

Crude death rate - the total number of deaths per 100,000 persons.

Age adjusted death rate - the total number of deaths per 100,000 persons, age adjusted to the 2000 U.S standard population.

Premature death rate - the number of deaths to residents under age 75 per 100,000 persons age-adjusted to the 2000 U.S. standard population.

For more information on these rates and age adjusting, see the introduction

\*Rates not calculated for fewer than 20 deaths.

**Major Causes of Death**

**ICD-10 Codes**

Cancer [Malignant Neoplasms]	C00-C97
Chronic Lower Respiratory Disease	J40-J47
Cirrhosis	K70, K73-K74
Diabetes	E10-E14
Heart Disease	I00-I09, I11, I13, I20-I51
Nephritis	N00-N07, N17-N19, N25-N27
Pneumonia & Influenza	J10-J18
Septicemia	A40-A41
Stroke [Cerebrovascular Disease]	I60-I69
Suicide	X60-X84, Y87.0
Unintentional Injury	V01-X59, Y85-Y86

Five years of data were used because of small numbers of deaths to those under age 75.

This table also limits the causes of death to the top 10 because of small numbers of deaths to those under age 75.

Premature death rate - the number of deaths to residents under age 75 per 100,000 persons under age 75, age-adjusted to the 2000 U.S. standard population.

For more information on these rates and age adjusting, see the INTRO

\*Rates not calculated for fewer than 20 deaths.

**Major Causes of Death**

**ICD-10 Codes**

Cancer [Malignant Neoplasms]	C00-C97
Chronic Lower Respiratory Disease	J40-J47
Cirrhosis	K70, K73-K74
Diabetes	E10-E14
Heart Disease	I00-I09, I11, I13, I20-I51
Nephritis	N00-N07, N17-N19, N25-N27
Pneumonia & Influenza	J10-J18
Septicemia	A40-A41
Stroke [Cerebrovascular Disease]	I60-I69
Suicide	X60-X84, Y87.0
Unintentional Injury	V01-X59, Y85-Y86

Five years of data were used because of small numbers of deaths to those under age 75.

This table also limits the causes of death to the top 10 because of small numbers of deaths to those under age 75.

Premature death rate - the number of deaths to residents under age 75 per 100,000 persons under age 75, age-adjusted to the 2000 U.S. standard population.

For more information on these rates and age adjusting, see the INTRO

\*Rates not calculated for fewer than 20 deaths.
