## Introduction

This report is the twelfth in a series presenting data on the status of women and men in Minnesota's Technical Institute System. The format is like publications of the past several years. The body of the report provides current and trend data statewide for student enrollment and follow-up and for staff patterns. A detailed appendix provides information for individual Technical Institutes, a course-bycourse statewide listing, trend data and definitions.

Staff data are from licensure information. Data on administrators include part-time and extension staff. Student data since 1983-84 are from the technical institute follow-up system. The information from prior years is from budget data, which are no longer available by sex. The data from previous years are included, despite being from a different data base, in order to provide some comparison. Student data are for continuous day students.

Both statewide and individual school data are presented in this report. Statistical information is no substitute for active sex equity efforts. However, the statistics can be used to indicate areas needing special efforts and to measure progress.

## Enrollments, 1986-87

In the fall of 1986, Technical Institutes had higher enrollments than the community colleges but lower than the state universities and the University of Minnesota. Female students account for just over twofifths of Technical Institute enrollments. In 1986-87 the total statewide enrollment of 43,829 consisted of 18,340 female students and 25,489 male students.

The Technical Institute system has a lower percentage ( 42 percent) of female students than the other public post-secondary systems in Minnesota -- the Community College system ( 60 percent female), the State University system ( 54 percent female) and the University of Minnesota system ( 46 percent female).

Women are the majority of students at two Technical Institutes, Bemidji and Brainerd. At seven Technical Institutes women represent less than one-third of students. Women account for one-third to onehalf of students at the remaining 24 Technical Institutes. (See Table 1.)

Headcount, 1986-87

43,829 Students

Except where otherwise noted, enrollment data in this report refer to an actual student headcount of continuous day students enrolled at a particular time during the school year. Average daily membership, the usual measure of enrollment, is not reported by sex.

## Enrollment Trends

Enrollment figures for 1986-87 show a slight increase in the number of students than 1985-86. Since 1977-78 there has been a slight increase in the number of both female and male enrollments. Enrollments were at their highest level in 1983-84.

Over the years, the percentage of women enrolled in Technical Institutes has remained fairly constant. The percentage of Technical Institute students who are women is slightly higher than in 1985-86.

## Student Headcount Enrollments

## Program Types, 1986-87

A total of 814 programs are offered at individual Technical Institutes in the state, with an average of 25 programs per school.

Nearly three-fourths of Technical Institute programs are "segregated". This term is not meant to imply that segregation is intentional. In this report, a segregated program is defined as one in which more than 80 percent of the students are of one sex.

Segregated programs in which more than 80 percent of students are men are defined as "male" programs, and those in which more than 80 percent of the students are women are defined as "female" programs. All other programs are considered "integrated".

For example, Auto Mechanics is a segregated "male" program and Practical Nursing is a segregated "female" program, while Sales Associate is integrated. A program may be segregated at one Technical Institute and integrated at another.

Programs, 1986-87

814 Programs

Of the 814 programs offered at individual Technical Institutes, 390 are segregated "male" programs and 207 are segregated "female" programs. In fact, one-fourth of programs are either all-male or allfemale. (See Tables 2 and 4.)

## Program Types - Trends

The total number of programs offered at individual Technical Institutes increased over the past year. The number of integrated programs remained the same and the number of segregated programs increased. Over the years the number of Technical Institute programs which are integrated has increased.
Since 1979-80, the percentage of integrated programs has remained at about one-quarter of all programs. Integrated programs account for 27 percent of all programs and showed a slight decrease over the last year.

## Program Type

## Program Types - Trends, continued

Segregated programs are not evenly divided into "male" and "female" programs. Since 1977-78 segregated "male" programs have outnumbered segregated "female" programs by a substantial margin. "Male" programs account for nearly two-thirds of segregated programs.

Data for the current year show a slightly lower percentage of "female" programs and a slightly higher percentage of "male" programs as last year.

## Segregated Programs

## Enrollments By Program Type, 1986-87

The number of students enrolled in a program varies widely from less than 10 at several schools to several hundred at others. For this reason, it is helpful to compare the numbers of students as well as the numbers of programs to determine enrollment patterns by sex.

A "traditional" student is one enrolled in a segregated program dominated by students of the same sex -- men in "male" programs and women in "female" programs. A "non-traditional" student is one enrolled in a program in which more than 80 percent of students are of the other sex.

As shown in the chart below, the large majority -- over two-thirds -- of Technical Institute students are enrolled in traditional programs, while about 1 in 25 students are enrolled in programs which are nontraditional for their sex. More than one-quarter of all Technical Institute students are enrolled inintegrated programs.

## Enrollments By Program Types, 1986-87

At four Technical Institutes -- Albert Lea, Brainerd, Mankato and Minneapolis -- integrated programs account for 35 percent or more of all students.

Hibbing has the largest proportion of students enrolled in non-traditional programs, accounting for just under seven percent of students. Duluth, Faribault and Minneapolis have over five percent of students enrolled in non-traditional programs.

## Enrollments By Program Type, continued

Both male and female students are likely to be enrolled in programs which are traditional for their sex, and unlikely to be enrolled in non-traditional programs. However, there are differences in the enrollment patterns of men and women attending Technical Institutes.

Female students are more likely than male students to be enrolled in integrated programs -- nearly one-third of women compared to nearly one-fourth of men. Female students are over two times as likely as male students to be enrolled in non-traditional programs -- almost 1 in 17 female students compared with about 1 in 40 male students. (See Tables 6 and 7.)

## Enrollments By Program Type, 1986-87

Statewide, just over one in seven Technical Institute students are enrolled in programs which are either all-male or all-female. There are 4,153 male students in programs with no women and 1,883 female students in courses with no men. (See Tables 3 and 4.)

In addition, many courses have only one female student or only one male student. These pioneering students are in courses with an average of 41 students of the other sex. Forty-two women are "the only woman" in courses such as Welding. Thirty men are "the only man" in courses such as Data Entry.

## Enrollments By Program Type - Trends

Little change has occurred over the past several years in enrollment patterns for traditional, non-traditional and integrated programs. The 1986-87 data show a very slight increase in the percentage of integrated and non-traditional enrollments. Traditional enrollments decreased slightly.

The proportion of students enrolled in integrated programs has remained at more than one-quarter in the 1980s, up from one-fifth in 1977-78. Non-traditional students account for about 1 in 26 students, and there has been an increase of almost one percent since 1978-79.

## Student Enrollment By Program Type

Note: Totals may not add up to $100 \%$ due to rounding.

## Enrollment Trends, continued

Over the years there has been more change in female enrollment patterns than in male enrollment patterns. Female integrated enrollments have increased from fewer than 1 in 4 , to 1 in 3 . Female nontraditional enrollments have increased one percent since 1977-78.

The change in male enrollment patterns has been at a slower rate than that of female enrollments. Male enrollments in integrated programs have remained at about 1 in 4 since 1979-80, up from 1 in 5 in 1977-78.

Male Enrollment By Program Type

## Curriculum Area Enrollment, 1986-87

The graph below shows the distribution of male and female students in the seven Technical Institute curriculum areas.

Over three-fifths of female students are enrolled in health or business and office programs, while over three-fourths of male students are enrolled in technical or trade-industrial programs. (See Table 8.)

## Headcount By Curriculum Area, 1986-87

There is also segregation within program areas. For example, just over three-fourths of male business and office students are enrolled in only 3 of the 23 courses offered statewide: Accounting, Computer Programming and Data Processing Occupations.

Just over half of female students in the trade and industrial area are enrolled in only 2 of the 61 courses: Commercial Art and Offset Printing (See Table 11)

## Curriculum Area Enrollment - Trends

There have been few changes in male and female enrollment patterns by program since 1977-78. Agriculture, technical and trade and industrial curriculum areas continue to be "male" while health and business and office are "female". Home economics and distribution are more balanced areas.

The charts below and on the following pages show changes in enrollment patterns by curriculum area. For more information on enrollment in specific programs in 1986-87, see Table 11 in the appendix to this report.

## Agriculture

Women represent about 1 in 6 agriculture students. Female enrollments in this area are slightly above those of last year.

Of the 11 agriculture programs offered statewide, six are "male" programs, four are integrated programs and one is a "female" program. The "male" programs account for over seven in ten agriculture students. Just over three percent of agriculture students are enrolled in non-traditional programs.

## Curriculum Area - Trends, continued

Distribution has historically been the most balanced by sex of the curriculum areas. Of the 26 distribution programs offered statewide, 14 are integrated while 7 are "male" programs and 5 are "female" programs. Two-thirds of students are enrolled in the integrated courses.

Men now represent just over 1 in 6 health students. Their enrollment has increased while there has been a decrease in female enrollments. Beginning in 1982-83 several programs previously assigned to trade and industrial were assigned to health. Of the 25 health programs offered statewide, 13 are "female" programs, 4 are "male" programs, and 8 are integrated programs. Less than one-fifth of health students are enrolled in integrated programs.

## Curriculum Area - Trends, continued Home Economics

There has been more change in the home economics area than in any other. Men represent just under two-fifths of students. Of the 21 home economics programs offered statewide, 7 are "female", 11 are integrated and 3 are "male". Over half of students are enrolled in integrated programs.

Men represent close to 1 in 6 business and office students. There has been little change in this area since 1977-78. Of the 23 programs offered statewide, 14 are "female" programs, and 9 are integrated programs. There are no "male" programs. Nearly three-tenths of the students are enrolled in the integrated programs.

## Curriculum Area - Trends, continued

Women account for about 1 in 7 technical students. Although their representation has fluctuated over the last several years, it remains above the level of 1977-78. Of the 45 technical programs offered statewide, 37 are "male" program and 8 are integrated programs. There are no "female" programs. One-fifth of the students are in integrated programs.

Women account for over 1 in 10 trade and industrial students. Of the 61 trade and industrial programs offered statewide, 49 are "male" programs and 12 are integrated programs. There is no female program. The integrated programs account for only 13 percent of students. There are no "female" programs. Eleven programs have no female students.

## Student Follow-up, 1986-87

Data are available for 10,770 women and 13,753 men who left Technical Institute programs in fiscal year 1986. The students who leave a Technical Institute are classified as either dropouts or completers. There are some differences in dropout and completion rates of women and men. Overall, women are less likely to dropout. Women and men are equally likely to complete programs.

Women have a higher dropout rate than their male counterparts in agriculture, technical and trade and industrial. Women have a higher completion rate in distribution and health. The greatest difference between male and female dropout and completion rates is in business and office. Women and men have about the same dropout and completion rates in Home Economics (See Table 16.)

There is also information on placement of students who are available for work and are placed in a job related to their program of study. Placement rates for these students are very high, with few differences by sex. The largest differences are in health and business and office, where women have higher placement rates. (See Table 16.)

The major difference between female and male students is in earnings. Women's earnings are consistently lower than the average earnings of all students. The salary data are available only by all students and by female students. There is not a separate breakdown for male students. In every curriculum area, women's salaries are less than salaries of all students.

## Average Earnings of Graduates

By Curriculum Area - One Year Later

## Staff Patterns, 1986-87

Staff patterns provide another measure of sex equity in the Technical Institute System. Staff data in this report are expressed in full-time equivalents (FTEs).

There are 1,724 Technical Institute instructors in the seven curriculum areas. There are an additional 364 staff in vocational related activities. Overall, less than three in ten of these instructors are women. Women account for slightly more than one-quarter of the curriculum area and two-fifths of the vocational-related staff. The only school where over one-half of instructors and vocational related staff are women is East Grand Forks Technical Institute, where women account for only 43 percent of students but 58 percent of instructors. At Rochester Technical Institute 45 percent of instructors in the seven curriculum areas are women, while 48 percent of the students at the school are women.

## Instructors, 1986-87

## 1,724 FTE Instructors

Female instructors in the seven curriculum areas have lower average salaries than male teachers at 25 of the 30 Technical Institutes, including 8 schools where the women have more years of service than their male counterparts. Statewide, male teachers now earn an average of $\$ 2,578$ per year of service, compared with $\$ 2,558$ for their female counterparts. (See Table 14 and 15.)

Women account for 21 percent of Technical Institute System administrators and supervisors in the state.

## Curriculum Area Instructors, 1986-87

The chart below shows the distribution of instructors by curriculum area, excluding vocational related activities. Three-fourths of female instructors are in health or business and office programs, while almost one-half of male instructors are in technical or trade and industrial programs.

There are only 19 female instructors in technical and trade and industrial programs, accounting for 2 percent of all instructors in these areas.

## Instructors By Curriculum Area, 1986-87

The proportion of instructors who are female is lower than the proportion of students who are female in every program area except health. This is true even for some areas that are predominately female such as business and office, where women are over 80 percent of the students but only 50 percent of the instructors.

## Staff Trends

Since 1977-78 there has been a decrease of 540 FTE instructor positions at Miñmesota Technical Institutes. This includes a decrease of 417 male instructors and a decrease of 123 female instructors. Statewide, female teachers have represented approximately one-quarter of all instructors during this period.

There has been an overall gain in the representation of women among technical institute system administrators and supervisors since 1977-78. The percentage of women has increased from 11 to 19 percent during this time.

## Appendix III - Definitions

All data in this report are from the State Board of Vocational Technical Education, as reported by local school districts. The following definitions are used:

Enrollment. The annual headcount conducted on October 1 includes every student enrolled in a continuous day program in a Technical Institute on that date, and does not control for the amount of time a student is enrolled.

Program. For the purposes of this report, programs have been limited to programs of study related to an occupation such as Health Aide or Welding. Special needs programs and other administrative and support programs have not been included.

Curriculum Area. Curriculum areas are the seven program areas: Agriculture, Distribution, Health, Home Economics, Business and Office, Technical and Trade and Industrial.

Segregated. Programs are defined as segregated if over 80 percent of their enrollments are of one sex.

Integrated. A program which is not segregated by sex is integrated.
"Male" Programs. A segregated program is defined as a "male" program if more than 80 percent of the students are male.
"Female" Programs. A segregated program is defined as a "female" program if more than 80 percent of the students are female.

Traditional. Students enrolled in programs where the total enrollment exceeds 80 percent of their own sex are defined as traditional students.

Non-Traditional. Students enrolled in segregated programs dominated by students of the other sex are defined as non-traditional students.

Average Yearly Salary. This salary is the total contracted salary based on full-time equivalence, and therefore controls for the number of weeks worked and for part-time employment.

Average Years of Service. Years of service refers to total years as a licensed teacher or administrator, not simply as an employee of a particular institution.

Dropout Rate. The percentage of male or female students who leave a Technical Institute that are dropouts.

Completion Rate. The percentage of male or female students who leave a Technical Institute that have completed their program of study.
