In Appreciation

We are indebted to the students, teachers, Minnesota Student Survey coordinators, principals and superintendents across the state that agreed to participate in and supported the student survey when it was administered in the spring of 2010. These data are made available as a result of their interest and time and we are grateful for their efforts.

We are also indebted to the many state agency staff, especially the analysts with the Center for Health Statistics at the Minnesota Department of Health, for their tireless work on making these data available.

2010 MINNESOTA STUDENT SURVEY

Survey Participation

The 2010 Minnesota Student Survey was administered in the spring of 2010 to public school students in Grades 6, 9, and 12 statewide. All public school districts in Minnesota were invited to participate. Of the 335 public operating districts, 295 agreed to participate (88% of public operating school districts).

Student participation was voluntary and surveys were anonymous. Across the state, approximately 79% of public school sixth graders, 75% of public school ninth graders, and 59% of public school twelfth graders participated in the 2010 Minnesota Student Survey. Overall participation across the three grades was approximately 71% of total enrollment.

The majority of schools in the state used an opt-out consent procedure for the survey (meaning that parents could decline to have their children take the survey). A few school districts used an active consent process (meaning parents were required to return a signed permission slip before their children took the survey). Not every student who participated in the survey answered every question.

Items on the Tables

The accompanying set of tables includes the responses for all survey items. Items are ordered within the tables according to meaningful domains; the order items appear on the tables is not necessarily the order they appeared in the survey. A Table of Contents is provided on page iv. The Grade 6 survey version was shorter than the Grade 9-12 version and did not include items appropriate only for older students. Items found on one version of the survey but not the other are identified on the tables.

New Questions and Year-to-Year Comparisons

A small number of the 2010 survey instrument questions were changed from the 2007 survey instrument. New questions and questions with changed wording are noted on each table. Caution must be used when making comparisons over time for any questions in which the wording has changed.

Please note that although these surveys are given repeatedly over time, student populations may change between administrations of the survey.

Validity of Responses

Approximately 3% of the surveys were eliminated from analyses because gender was missing, responses were highly inconsistent, or there was a pattern of likely exaggeration.

		Gender		
		Male	Female	
		%	%	
At the present time, do you think you are...	Underweight	14%	5%	
	About the right weight	66%	52%	
	Overweight	20%	43%	
During the last 12 months, have you done any of the following to lose or control weight? (Mark all that apply) ^	I am not trying to lose weight or control my weight	Yes	46%	40%
		No	54%	60%
	Fast or skip meals	Yes	9%	33%
		No	91%	67%
	Smoke cigarettes	Yes	11%	26%
		No	89%	74%
	Exercise	Yes	45%	46%
		No	55%	54%
	Use diet pills, speed or other drugs	Yes	4%	11%
		No	96%	89%
	Eat healthier	Yes	26%	27%
		No	74%	73%
	Vomit on purpose after eating	Yes	2%	13%
		No	98%	87%
	Use laxatives	Yes	1%	4%
		No	99%	96%
Weight status according to Body Mass Index (BMI) **	Not overweight	62%	55%	
	Overweight	20%	25%	
	Obese	18%	20%	

^ Variations in the number and order of these response options may affect year-to-year comparisons.

** Body Mass Index (BMI) is a number calculated from a child's self-reported weight and height. BMI can be used as a screening tool to identify possible weight problems for children and teens. The BMI number is calculated using a standard formula. BMI-for-age percentiles are used to interpret BMI numbers because, unlike adults, BMI is both age- and sex-specific for children and teens. The CDC BMI-for-age growth charts take into account these differences and allow translation of a BMI number into a percentile for a child's sex and age. The CDC growth charts were used to determine weight status according to BMI for participants in the Minnesota Student Survey.

Not overweight: Less than the 85th percentile
Overweight: 85th to less than the 95th percentile
Obese: Equal to or greater than the 95th percentile

2010 Minnesota Student Survey
