Legislative Commission on Minnesota Resources

B.46 STATE CAPITOL

ST. PAUL, MINNESOTA 55155

(612) 296-2406

ROBERT E. HANSEN

November 15, 1984

Members of the Legislature:

The "1984 Report to the Legislature" is submitted as required under MS 86.11, Subdivision 5. This Report is a fulfillment of part of the Legislative Commission on Minnesota Resources (LCMR)'s responsibility to "provide the background necessary to evaluate programs proposed to preserve, develop and maintain the natural resources of this state." (MS86.02) Working cooperatively with the appropriate standing committees, the Commission will continue to identify and research emerging resource issues facing the state. The LCMR recommends appropriations from the natural resources account for innovative and/or accelerative programs. The Commission will continue to monitor and evaluate funding from the natural resources account and other programs as directed by the Legislature.

The Commission requested the advice of a wide range of organizations and individuals, including the appropriate standing committees, as to which resource issues present the most pressing problems to the state and which, therefore, deserve the special consideration of the Commission. The 1984 LCMR Issues Seminar at Itasca State Park produced lively and thoughtful discussion of pressing problems in major issue areas. After over 100 hours of hearings in the summer, the Commission adopted recommended appropriations from the Natural Resources Acceleration Account for consideration and adoption by the 1985 Legislature.

The Legislative Commission on Minnesota Resources is now, and will continue to be, an effective resource for the Legislature in dealing with emerging natural resource issues.

Sincerely,

Senator Clarence M. Purfeerst, Chairman, Legislative Commission on Minnesota Resources

/mlk

### Role of the Commission

The role of the Legislative Commission on Minnesota Resources (LCMR), is to implement the purpose of Minnesota Statutes, Chapter 86.02:

. . . to provide the Legislature with the background necessary to evaluate programs proposed to preserve, develop and maintain the natural resources of this state.

Thus, the Commission is an advisory, oversight and monitoring body for the Legislature. The LCMR acts as an information base for the Legislature regarding various resource programs. The Commission also has a role, implicit from the types of programs with which it is involved, to make inquiries and instigate action designed to examine potential innovative and/or accelerative approaches to State programs. The latter function has evolved from the basic orientation of the LCMR, expressed through its members, toward involvement with programs designed to meet future needs or to correct past program mistakes or shortfalls. The Commission focuses upon relatively new ideas and emerging natural resource issues, which are not otherwise to be considered as part of the regular budgets of State agencies.

The Commission is composed of fourteen Legislators: seven Senators appointed by the Senate Committee on Committees and seven Representatives appointed by the Speaker of the House. Vacancies which may occur do not affect the authority of the Commission. Members serve until a successor is appointed.

### Funding Sources

The Commission performs a substantial part of its advisory role by recommending that certain programs be supported with appropriations. In most cases, it recommends that those appropriations be provided from the Natural Resources Account, which receives income from several sources. Eleven percent of the cigarette tax is deposited in the General Fund and specified by appropriations laws to support the Natural Resources Account. That amount was estimated to total approximately \$20 million for Fiscal Years 1986-87. The second income source consists of Federal reimbursements which are earned by expenditure of the State appropriations. The reimbursements are deposited in the Federal Reimbursement Account and support the appropriation recommendations. This source will account for approximately \$178,500 for Fiscal Years 1986-87. Additionally, the Commission reviews the State Park Development Account and recommends appropriation of that amount as part of the Natural

- 4 -

Resources Account. The current FY86-87 biennium figure is approximately \$1,333,400. Finally, certain amounts of past appropriations from the Natural Resources Account which will not be spent are added to the amount available for the next biennium. The total estimated for cancellations is \$205,600. The total of all four sources was rounded to \$22 million for FY86-87.

Each even numbered year, the Commission reviews the past programs supported by Natural Resource Appropriations, as well as existing State programs of Natural Resource management. The Commission invites various statewide organizations and individuals, including the appropriate standing committees, to suggest issue areas. The Commission then selects a number of issue areas for concentration and later recommends that certain programs in those issue areas be financed with Natural Resources Account appropriations. Before the LCMR recommends an appropriation for a program, every effort is made to insure that the suggested program is not a duplication of existing State agency programs nor merely a supplement to regular agency budgets.

Once the set of programs submitted by the LCMR to the Legislature is finally adopted in appropriation laws, the Commission implements its responsibility to closely monitor the programs in order to insure that the correct problems are addressed, in a manner consistent with the intention of the Legislature. The appropriation laws require the LCMR to review for approval a detailed work program submitted by the agencies which describes the proposed implementation of the program, before the actual implementation can begin. Thus, the LCMR has an opportunity to supervise closely the program once it is approved by the Legislature. The Commission also reviews, on a regular basis, semi-annual status reports submitted on each of the programs. In those cases where a program appears to be straying from Legislative intent or suffering from lack of direction or initiative, the Commission calls upon the State agency involved to rectify the problem.

### Relationship with other Committees

The LCMR maintains an effective liaison relationship with the appropriate standing committees of the Legislature. This is accomplished in two ways. First, the membership of the Commission traditionally includes the Chair and/or key members of the Senate Finance and House Appropriations Committees, the Senate Natural Resources and Agriculture Committee and the House Committee on Environment and Natural Resources. In addition, the other members of the LCMR are also key members or chair one or more standing committees. Thus, the standing committees are informed of the actions and recommemdations of the Commission through the direct participation of their Chair and members in the LCMR activities. Secondly, the staff of the LCMR maintains communication with the staff of those standing committees. Informal contacts by telephone and in person complement the

- 5 -

peridoc formal communications. Frequently, one of more of the staff from the standing committees are invited to participate in discussions between the LCMR staff and the various organizations, agencies and persons interested in the Commission. The staff of the Finance, Appropriations and the Senate and House Committees on Natural Resources receive all the material and communications prepared by the LCMR staff at the same time as the LCMR members.

### Commission Operations

The Commission holds meetings as required in order to complete its responsibility to develop advice for the Legislature regarding various resource issues. When the LCMR or one of its subcommittees holds a meeting, the liaison officers from the various agencies and departments, as well as the general public, are informed as far in advance as feasible. The meetings are held at the State Capitol or on the site of programs which have received Natural Resources Account funding, or which require on-site review for development of LCMR background informa-The Commission or subcommittee Chair frequently request tion. State agency officials to appear and present testimony and appropriate data regarding the subject matter at hand. The Commission also uses written correspondence with various agencies of the State and Federal Government. After receiving testimony, correspondence and by conducting its own intensive discussions, the Commission develops recommendations to the appropriate persons, agencies and Legislative committees. Essentially, there are three alternative recommendations available to the Commission regarding the various programs under review. The Commission may recommend that a particular program receive Natural Resources Account funding support. A second alternative might be to conclude that a particular program is appropriate and effective and to recommend that the program should therefore be financed through the regular budget of the appropriate agencies. The third alternative is for the Commission to review its own evaluation of a given program and recommend that the program be no longer conducted by the State.

### The LCMR Process

The series of events outlined below serves as an excellent example of how the LCMR functions as a legislative overview agent, and how the Commission provides the Legislature with background in natural resource program areas.

During its 1977 Issues Seminar, members heard from several sources that the condition of the state's forests was less than desirable. A variety of problems surfaced: Too much old wood, too little reforestation, too few roads, not enough private forest management, and many more. When Commission members wondered aloud why the forest conditions seemed to be in decline, the answers were confusing, conflicting and unclear. It became obvious that someone outside the existing structure of forest management and timber industry would be needed to sort out the problems and begin to define the solutions for the Legislature. The LCMR concluded that it was appropriate for the Commission to pursue the issues involved. A Forestry Sub-Committee began meeting to develop an approach.

In late 1977, with the advice of its Forestry Sub-Committee and with the concurrence of a citizen's advisory committee, the LCMR contracted for a preliminary appraisal of Minnesota forestry with the internationally recognized forestry consulting firm of Jaako Poyry, headquartered in Helsinki, Finland, with offices in ten other countries. The preliminary appraisal laid out plusses and minuses in both forest management and the timber and wood products industry. Using that report, the LCMR Sub-Committee on Forestry was charged to develop a broad based study proposal, select potential consultants and report to the Commission. The Forestry Committee used a small advisory committee extensively. The advisory committee represented the three major actors: Industry, Public Management and Academia.

During the balance of 1978 and early 1979, the Forestry Committee and its advisory committee worked out a study format. A review and selection process resulted in a contract with the George Banzhaf and Company of Milwaukee, Wisconsin. Under monthly Forestry Committee monitoring, Banzhaf researched the issues. In November 1980, Banzhaf delivered its report on time and within budget. The report lays out an analysis of forest problems and a viable range of alternative policy solutions. The LCMR accepted the report and paid the bill. The LCMR reviewed the Report and submitted it as LCMR findings to the 1981 Legislature.

During the 1981 Session, the Legislature established a joint House-Senate policy committee to review the LCMR work and recommend legislation. It was called the Joint Select Legislative Committee on Forestry (JSLCF). The JSLCF met during the summer and fall of 1981 and drafted the Forest Management Act of 1982. The Act was adopted by the 1982 Legislature.

Also during the 1981 Session, the LCMR took action on some of the preliminary findings in the Banzhaf report. The Commission recommended funding from the Natural Resources Account for Forest Information Systems, Statewide Forest Resource Plan, Fire Management Analysis, Private Forest Management Assistance, Detailed (Phase II) Forest Inventory, Pulpwood Weight Study and Forest Soils Specialist. Additionally, the 1981 Legislature appropriated increased money for reforestation of state forests and other intensification efforts. The discussion above indicates clearly how LCMR serves the Legislature. Issue and problem indentification and definition were followed by intensive study and recommended solutions. The Commission recommended appropriations for some solutions. As a matter of standing, agreed upon procedure, the Commission avoided any LCMR action on substantive policy matters, but instead delivered an organized and thoughtful analysis as a tool for the policy committees. The result to date is that solutions to many of the problems in forestry have been addressed with money and policy changes. The LCMR will continue to monitor progress in forestry through work program monitoring and periodic inquiry as necessary

### Highlights of the Past Two Years

The LCMR recommendations for 1983 appropriations from the Natural Resource Account were adopted, after minor modifications, by the Legislature in the State Departments Act (ML 83,Ch.301,Sec.31).

The 1983 programs cover a wide range of resource issues. Below just a few of the programs are summarized. Complete work programs and six-month status reports are on file in the Legislative Reference Library. Since the report is written in the middle of the biennium, there are few if any final results.

The minerals potential evaluation project was designed to employ some new techniques to determine what mineral value might exist in various parts of the state. Some early progress resulted in a determination that there are interesting occurrences of some minerals not heretofore known. More work and probably some private sector exploration will be needed before the full value The above progress was aided by the aeromagnetic survey is known. which detects differences in the character of the earth from an airborne perspective. The survey helps narrow the search areas for further evaluation. Some groundtruth drilling is necessary to establish the meaning of the survey. The survey will pay large dividends as it extends over the areas of the state covered by glacial drift. The drift material covers the bedrock, so little or no information is currently available on the geology and possible mineral occurences. The Commission also sponsored a program to research the potential for Minnesota minerals to contribute to nationally strategic mineral resources as well as a program to examine new and different routes for successfully processing taconite.

Several programs were initiated to detect possible pollution in various water resources. Old dump sites were selected and tested. Numerous community water supplies were also sampled. The Health and PCA programs were looking for organic chemicals which are not usually detected in routine sampling. PCA was able to head off some future problems by follow-up action in the surveys. Noteable examples are the Andover and Long Prairie

- 8 -

areas, which as of this writing, have been designated for federal Super Fund clean-up assistance. Other programs assisted the knowledge of groundwater resources with new techniques as well as data collection and monitoring in the difficult southeastern Minnesota groundwater situation.

During the early summer of 1983, the Commission reviewed and approved detailed work programs for the appropriations. During mid and late summer the members toured a significant portion of the state. The purpose was to observe the results of past programs and to collect firsthand information on the nature of a wide variety of resource management problems. The LCMR customarily notifies local legislators of pending LCMR visits. In several cases, local Senators or Representatives joined the LCMR for part of the local tours and briefings. The experience and knowledge gained by these visits were quite helpful to the members especially the four Representatives appointed in winter of 1983.

That background experience also helped the members as they convened to review natural resources issues in June of 1984 at Itasca State Park for the Issues Seminar. The members reviewed the written views of over ninety individuals and agencies. Numerous panelists also discussed the issues with the members over the three-day seminar. Former Speaker of the House and former longtime LCMR member, Rod Searle, greatly assisted the LCMR by providing some overview comments about his observations of the various discussions. Beginning in July, the members then reviewed over 120 proposals for a total of over \$57 million. Over 100 hours of full LCMR hearings were required before the final selection and adoption of the 47 projects recommended for 1985 funding from the Natural Resources Account.

The next page shows the program titles for the LCMR 1985 appropriation recommendations. The following several pages show which programs the Commission felt would more appropriately be considered as part of the regular budgets of the agencies.

Please see Appendix "A" for the complete listing of 1963-83 programs.

Legislative Commission on Minnesota Resources

B-46 STATE CAPITOL

1 ... 17

ST. PAUL, MINNESOTA 55155

(612) 296-2406

ROBERT E. HANSEN

September 4, 1984

The Honorable Rudy Perpich Governor of Minnesota Room 130, Capitol Building St. Paul, Minnesota 55155

Dear Governor Perpich:

The Legislative Commission on Minnesota Resources (LCMR) has finalized its recommendations for Natural Resource Acceleration appropriations for the 1985-87 biennium. A copy of these recommendations is attached for your information.

It became apparent to the Commission during their review of the 120 proposals received that a number of them should be part of the requesting agencies regular operations. The LCMR wishes to bring these programs to your attention for consideration during your budget preparation. These programs are as follows:

### Department of Natural Resources

Evaluation of Mosquito Control Activities, \$100,000

Minnesota Peatland Ecologic and Hydrological Study, \$190,000

Management Information Systems Project, \$1,720,000

Accelerated Land Exchange and Improved Land Management, \$160,000. For the conversion of two positions currently funded by LCMR to work in land sales, exchanges and leases.

### Department of Corrections

Cooperative Land Management Program, \$132,500 (Cooperative project with the Department of Natural Resources)

### State Planning Agency

Computerization of Wetlands Inventory, \$525,200

Microcomputers in Resource Management, \$200,000

SENATOR CLARENCE PURFEERST. CHAIRMAN FARIBAULT • REP WILLARD MUNGER VICE CHAIRMAN DULUTH • SENATOR EARL RENNEKE SECRETARY. LE SUEUR • SENATORS HOWARD & KNUTSON BURNSVILLE • WILLIAM LUTHER BROOKLYN PARK • GENEMERRIAM COON RAPIOS • ROGER D. MOE. ADA • GERALD L WILLET. PARK RAPIDS • REPRESENTATIVES TONY BENNETT. SHOREVIEW • DOUGLAS CARLSON SANDSTONE • PHYLLIS KAHN MINNEAPOLIS • HENRY KALIS WALTERS • LONA MINNE HIBBING • FRED C. NORTON ST. PAUL The Honorable Rudy Perpich Page 2 September 4, 1984

### Department of Agriculture

Agricultural Land Preservation and Conservation, \$435,500

Conservation Tillage Demonstration Program, \$304,000

We appreciate your consideration of this matter.

Sincerely,

Clarence M. Purfeerst

EXECUTIVE DIRECTOR

(612) 296-2406

ROBERT E. HANSEN

September 5, 1984

Mr. C. Peter Magrath, President University of Minnesota 202 Morrill Hall 100 Church Street S. E. Minneapolis, Minnesota 55455

Dear Mr. Magrath:

At budget meetings on August 15 and 31st, 1984, the Legislative Commission on Minnesota Resources elected not to fund the top priority project submitted by the Mineral Resources Research Center. The project request was for \$562,000 to initiate a continuing program in Reduction Technology. A major reason for denying LOMR funding was that the project was considered to be part of the basic MRRC mission and should have continuing funding via the MRRC state special.

The Commission therefore adopted a recommendation that the Board of Regents include an additional \$562,000 in the 1985 University budget request for the Mineral Resources Research Center state special for this purpose.

This action is consistent with the LOMR function of identifying critical areas for seed funding in a wide range of resource issues and thereafter to encourage continuation via funding through regular institutional channels. The state has a critical need for the restoration of MRRC base line funding to support a continuing long-term minerals research effort at a programmatic level at least equivalent to that of the early 1970's, and our resolution contributes to this objective.

Your favorable consideration of this recommendation will be greatly appreciated and will receive our active support during the legislative session. We would also appreciate your early advise on the relevant actions taken at the September Regents' meeting.

Sincerely,

Claunce m Purfeers

Senator Clarence M. Purfeerst, Chairman, LOMR
