(Funding for document digitization was provided, in part, by a grant from the Minnesota Historical & Cultural Heritage Program.)

# INTRO

This report explains what RIM does, how it works, and how it benefits the lives of all Minnesotans. The appendix lists the accomplishments of the program during fiscal year 1989 (July 1, 1988–June 30, 1989).

## **RIM** in a nutshell

**Reinvest in Minnesota**, or **RIM**, is a state conservation program that gives Minnesotans the environmental protection they deserve. How? By improving water quality, stopping soil erosion, increasing fish and wildlife habitat, and reducing flooding.

RIM began in 1986 after a coalition of environmental, conservation, and agricultural groups urged the state Legislature to reinvest tax dollars into Minnesota's deteriorating natural environment.

RIM is basically a reinvestment of tax dollars and private donations into Minnesota's priceless natural resources and billion dollar fish and wildlife-based recreation industry.

The goal of the RIM program is to strengthen this reinvestment by both the public and private sectors.

## What does RIM do?

RIM invests tax dollars into the land to naturally purify water, save rare species, improve fishing, increase wildlife populations, control flooding and erosion, and benefit the state's rural economy.

On private land, RIM helps landowners become better land stewards by providing financial incentives. On public land, it improves fish and wildlife habitat—the places where animals live and raise their young—to create more recreation for the state's steadily increasing number of anglers and wildlife enthusiasts.

## Who carries it out?

RIM is run by two state agencies: The **Department of Natural Resources** (**DNR**) carries out RIM's *public land* programs (Wildlife Enhancement, Fisheries Enhancement, Critical Habitat Match, Prairie Bank, and Forest Wildlife Management). The **Board of Water and Soil Resources (BWSR)** coordinates RIM's *private land* programs (RIM-Reserve), which are carried out in each county by the local Soil and Water Conservation District (SWCD).

## Who does it benefit?

RIM helps anglers, farmers, hunters, wildlife watchers, environmentalists, nature groups, rural residents, urban tourists, conservation groups, chambers of commerce, schools, hikers, naturalists, and most of all, future Minnesotans.

Minnesotans indicate time and again they care strongly about the environment. In 1988, for example, the Environmental Trust Fund passed with an overwhelming majority.

# STATE

RIM is Minnesota's most comprehensive conservation program. One of its strongest features is a wide range of projects improving the environment and recreation for Minnesotans across the state. As this map shows, RIM's statewide benefits range from thousands of acres of restored farmland habitat in the south to thousands of acres of brushland and forest habitat in the north.

> Each workday, RIM enhances or protects an additional 300 acres of land or water.

RIM's benefits reach out to the citizens in every one of Minnesota's 87 counties. These examples show the number and diversity of RIM's public and private land projects over the past three years. Many of the projects on these lists are RIM's private partnerships—Minnesotans working with state and local agencies and conservation groups to improve water quality, reduce erosion, and increase fish and wildlife populations.

In Cottonwood County, 31 RIM projects have been completed since 1986. In 1989, an additional 19 landowners signed up for RIM Reserve easements.

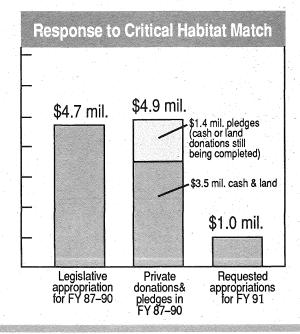

# LOCAL

## RIM's Unique Donation-Doubler

Donations of land or money by Minnesota citizens are a key element of the RIM's Critical Habitat Match program.

Minnesotans have shown their support for RIM and the conservation of the state's natural resources by donating millions of dollars in land or cash. The very first RIM land donation, in 1986, was 434 acres of northern hardwoods and balsam bordering the Willow River in Aitkin County. The tract was donated by Mr. and Mrs. Dan Roberts, and was established as the Roberts-Wickstrom Wildlife Management Area, named after the Roberts and their grandfather, who once owned the property.

This gift of land not only benefited wildlife watchers, hunters, and hikers, it freed up matching RIM funds to be used for wildlife enhancement in other areas of the state.

Ruffed grouse have been thriving in many public areas acquired through RIM's Critical Habitat Match program.

"It's a beautiful piece of woods," said DNR Area Wildlife Manager Dave Dickey. "We've been pleased with the use it's been getting over the past three years by local hunters and birders."

Besides deer, ruffed grouse, and sharp-tailed grouse, the wildlife area has a variety of songbirds, such as the bobolink.

RIM's Critical Habitat Match program matches donations of land or cash to buy or improve important wildlife habitat.

Since 1986, Minnesotans concerned about soil, water, and fish and wildlife conservation have donated over \$1.5 million in cash and over \$2 million in land to this program.

5

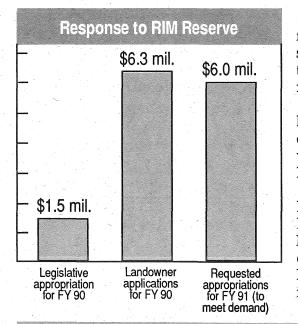

Public support for RIM comes from individuals, families, and local and state conservation groups. These two examples, from Aitkin and Cottonwood counties, show how RIM works on a local level. Both demonstrate ways Minnesotans use RIM to help the environment and improve the quality of life for themselves and others living in or visiting Minnesota.

## **Stewardship for Private Land**

"I can remember years ago when I was a child there used to be flocks of ducks and geese a half-mile wide and a mile long."

Robert Anderson is a retired policeman and part-time farmer from Mountain Lake in Cottonwood County. Ducks and geese still fly over the Anderson farm, but their numbers are greatly reduced from the massive flocks of 50 years ago, when southwestern Minnesota was still dotted with small wetlands and native prairie. Pheasant numbers have also decreased, as have almost every other kind of wildlife species that once thrived in the area.

In 1988, Anderson and his wife Virginia decided to do something to bring wildlife back to their land: They en-

Robert and Virginia Anderson enrolled 18 acres of erodible farmland in RIM to restore wildlife.

rolled 18 of their 293 acres in the RIM Reserve program. In the spring of 1989, Anderson planted the 18 acres of highly erodible cropland to trees and switchgrass. The trees will prevent erosion and provide wildlife cover; the grass will anchor the soil.

RIM covered most of the cost. "It's got good cover, protecting it from wind erosion and runoff," Anderson said. "The trees will also improve the looks of the land, by making it more scenic."

Randy Markel, the local DNR wildlife manager, said the Anderson's RIM easement will "provide good cover for wintering pheasants," and other wildlife.

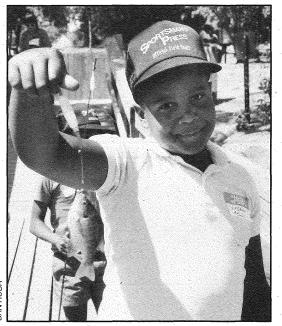

The Andersons are just one of 1,300 landowners who have enrolled land in RIM Reserve, which helps restore Minnesota's natural resources through erosion and sediment control, wildlife habitat restoration, and water quality improvement. RIM Reserve improves privately owned land, which makes up over three-fourths of Minnesota's land area.

# RIM ACTIVITIES How they improve these resources:

## Water Quality

Drinking water is purified and rivers and lakes are cleaned thanks to RIM Reserve's different easement projects. **Sensitive Groundwater Area easements**, for example, reduce erosion and sedimentation, improve groundwater recharge, and reduce the amount of pesticides that enter lakes and streams. Most of the DNR's RIM projects help water quality, too. **Easements along trout streams** allow native vegetation to grow on stream banks to filter sediment and pollutants

As RIM projects clean sediment and pollutants from runoff, drinking water gets cleaner, fish get healthier, and fishing improves.

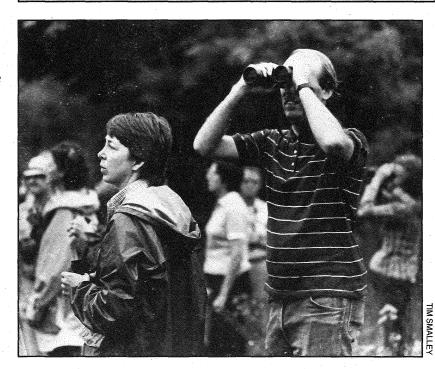

from surrounding fields. Wetlands donated by citizens through RIM's **Critical Habitat Match** act as settling basins for polluted water, sending clean, filtered water downstream to lakes and rivers.

## Wildlife

What RIM does for wildlife is give them more places to live and raise their young. RIM Reserve's Wetland Restoration easements, for example, preserve private wetlands for ducks, herons, mink, songbirds, and other critters of marshy areas. RIM's Wildlife Enhancement improves and maintains wildlife habitat on public land, such as sharp-tailed grouse and moose habitat on state wildlife management areas. Forest wildlife coodinators, funded with RIM dollars, help ensure forests remain healthy homes for ruffed grouse, woodpeckers, deer, and other woodland creatures.

## Fish

Healthier fish and happier anglers are two goals of RIM projects that improve water quality, such as RIM-Reserve's **Riparian Lands easements**, RIM consists of 15 different activities that work on specific types of land or water. RIM Reserve, for example, is soley for private land. Wildlife Enhancement, on the other hand, works primarily on public land. Critical Habitat Match is sort of a combination of the two, taking private donations of land and cash and using them for fish and wildlife habitat on public land. The other RIM activities protect or improve water quality, soil, or fish and wildlife habitat on a variety of other land types.

which keep erosion from muddying lakes and streams. The Fisheries Enhancement projects improve trout streams, protect spawning areas for many warmwater species, and increase the number of fish raised in hatcheries. **RIM's Fish Contaminants Monitoring** project tests fish for chemicals that could endanger fish populations and human health. Carp barriers, installed with RIM funds, keep this exotic species from muddying game fish waters. **RIM's Critical Habitat Match** gives private conservation groups a funding boost to improve the fishing on local waters.

## Rare Species and Rare Habitat

One way RIM protects rare plants and animals is by partially funding the **Minnesota County Biological Survey**, which identifies critical habitats and wildlife. Bald eagle nests are protected using **Critical Habitat Match** funds. RIM preserves rare grasslands and prairie species on private land with the **Prairie Bank**, and on public prairies with **prescribed burning**.

## Soil

Soil is supposed to stay put; it shouldn't move around in the form of erosion or runoff. RIM Reserve's Marginal Farmland easements control wind and water erosion on land vulnerable to the elements. Soil is anchored with native grasses and trees as part of RIM's Wildlife Enhancement projects. RIM unites citizens and state government in partnerships that create the kind of environment all Minnesotans deserve.

# 1991 PLAN

# BWSR

The primary focus of RIM Reserve in 1991 will be to enroll more highpriority land into perpetual easements. The overall priorities will continue to be: enhancing fish and wildlife habitat, reducing soil erosion, and improving water quality.

In mid-summer, 1990, the BWSR will determine the easement categories which have the greatest benefits to natural resources conservation.

Another late summer sign-up is planned this year for the 1991 easements. Funds will be designated to landowner sign-ups in the high-priority categories.

**1991 RIM Spending Plan** 

# DNR

The 1991 plan for DNR-administered Wildlife Enhancement, Fisheries Enhancement, Private Land Habitat, and Critical Habitat Match activities will be similar to the focus of previous years.

**RIM** forest management activities will focus on benefits for wildlife. Prairie Bank enrollment is expected to accelerate with 3,000 acres to be enrolled in FYs 90–91.

Regional environmental review, instream flow analysis, fish contamination studies and several wildlife research studies began in FY 90 and will continue in FY 91. The Minnesota County Biological Survey will expand its critical habitat identification into 10 more counties.

The spending plan outlined here is based on agency funding requests for FY 91-92

#### **RIM RESERVE CONSERVATION EASEMENTS**

- (\$6 Million, Bonding)
- Sensitive Groundwater Areas
- Wetland Restorations Marginal Ag Land
- **Riparian Areas** 
  - Steep Hillside Pastures

**BWSR COORDINATION** (\$150,000, General Fund)

SWCD IMPLEMENTATION (\$750,000, General Fund)

#### **RESOURCE PROTECTION**

- (\$1.6 Million, Bonding)
- Fish Habitat Acquisition - Wildlife Habitat Acquisition

- Prairie Bank

#### **DNR FISH AND WILDLIFE**

- (\$1.6 Million, General Fund)
- Forest Wildlife Coordination
- **Environmental Review** Contaminants Monitoring
- County Biological Survey
- Program Coordination
- Wildlife Research
- Aquatic Education
- **Private Land Habitat**

#### RESOURCE PARTNERSHIPS

- (\$1.0 Million, Bonding) - Critical Habitat Match
- **RESOURCE DEVELOPMENT** (\$ 3.4 Million, Bonding)
- Wildlife Habitat Improvement
- Fish Habitat Improvement - Fish Culture
- Prairie Habitat Improvement - Forest Habitat Improvement

# QUESTIONS and ANSWERS

RIM is a flexible program that adapts to the changing needs of Minnesotans and variations in the environment. Since 1986, RIM has evolved in many ways, usually in response to issues raised by citizens at annual RIM public input meetings.

These questions and answers are transcribed from three RIM public input meetings held in the spring of 1989.

**Q:** How is RIM Reserve different from the federal Conservation Reserve Program (CRP)?

A: 1. RIM Reserve retires land under long-term (perpetual or 20-year) easements recorded in the land title. CRP uses 10-year contracts.

2. Unlike CRP, all RIM Reserve enrollments are screened and prioritized by local committees.

3. Mowing or grazing is not allowed on RIM easements, as it may be on CRP contracts.

4. RIM applies to different types of land.

**Q:** How is the new Environmental Trust Fund (ETF) related to RIM?

A: According to proposals by many legislators, the ETF will be the major funding source for RIM. It looks like the main source of revenue for the ETF will be the state lottery. Starting in the 1992–93 funding biennium, the ETF will have \$5 million, part of which may go to pay for RIM programs.

**Q**: What happened to the RIM Aspen Recycling program?

A: In 1986, forest wildlife needed aspen recycling because there were large tracts of overmature aspen not being harvested. As aspen logging has dramatically increased over the last three years, the Legislature has modified RIM legislation to allow Aspen Recycling funds to be used for "other forest wildlife management activities."

**Q:** How has the Living Snowfence program been working out?

A: So far, the Living Snowfence program has not been popular with landowners. They are unwilling to enroll the large acreage—especially prime farmland—needed to plant six rows of trees and shrubs required to benefit wildlife.

**Q:** Why is the minimum RIM Reserve easement 20 years?

A: Two reasons: One, the longer land is taken out of production, the more it benefits wildlife and water quality. Two, the 1987 Legislature changed the minimum from 10 to 20 years because it takes approximately 17 years to pay off the bonds used to fund the program. During the Fiscal Year 1990 signup, 89% of the landowners preferred perpetual easements. In 1989, Minnesotans asked questions and voiced their opinions about RIM at public input meetings held in Rochester, St. Paul, and Alexandria

# What Minnesotans are saying about RIM:

"We're seeing wildlife now we haven't seen in years." —Ken Trom RIM-Reserve participant Austin

"By paying farmers to devote their most erodible land to conservation purposes, [RIM] can help prevent soil erosion, improve water quality and restore wildlife habitat."

-Rep. John T. Rose

Former chairman, House Committee on Environment and

Natural Resources.

"The challenge for states is to lay the groundwork for public policies and private practices that maintain agricultural producers' competetive edge, while reducing the negative impacts of agriculture on environmental quality. An example worthy of emulation at the state level is the Reinvest in Minnesota (RIM) program."

-C. Ford Runge

Director,

Center for International Food and Agricultural Policy, University of Minnesota

RIM

This report was printed with soy ink on recycled paper.

Design by Tom Dickson, DNR Division of Fish and Wildlife. "The benefits of RIM have been tremendous. It has added over 45 square miles of new pheasant habitat on private lands in Minnesota. RIM's Critical Habitat Match program has allowed us to double our local conservation efforts."

—Jeff Finden Pheasants Forever

Reinvest in Minnesta (RIM) is administered under the Board of Water and Soil Resources, Southbridge Office Building, Suite 104, 155 South Wabasha Street, St. Paul, MN 55107; (612) 296-3767; Wayne Edgerton, Coordinator; and the Department of Natural Resources, Division of Fish and Wildlife, 500 Lafayette Road, St. Paul, MN 55155-4020; (612) 297-1308; Jay Rendall, Coordinator.
