## Introduction

The last decade has witnessed a growing awareness of the need to provide equal opportunity in vocational education. Preparation for employment plays an important role in a society where the majority of adults, both men and women, will be employed for most of their lives.

In response to this need, both state and federal laws now require schools to provide equal opportunity in education as well as in employment. Title $I X$ requires the elimination of sex discrimination in all aspects of education, while Title $\| l$ requires the elimination of sex bias and sex stereotyping at every level of vocational education. In addition, Minnesota statutes require each school district to file assurances of compliance with state and federal sex equity laws.

In 1978, the Council on the Economic Status of Women contracted with the Minnesota Department of Education to provide information which schools could use to evaluate progress toward these goals. Project objectives were to gather and analyze data on the status of male and female students and staff in vocational education in the state, and to make this information available to schools, government agencies, and interested persons.

This report is the first in a series of reports presenting information about students and staff in secondary-level vocational programs. 'Vocational" programs are defined as those receiving reimbursement administered by the Minnesota Vocational Technical Division of the Department of Education. Generally, the format of this report is similar to that used in previous Council reports on vocational education at the post-secondary level.

Most of the data presented here was made available through the Minnesota Civil Rights Information System, or MINCRIS, as reported by local school districts to the Minnesota Department of Education. MINCRIS is a new system which provides extensive data by sex and race for the first time. This report gives ștate total enrollments, as reported on October 1, 1980 for the 1980-81 school year. Information for individual school districts is available from the Equal Educational Opportunities Section, Minnesota Department of Education.

Student follow-up information in this report was made available by the Minnesota Research and Development Center for Vocational Education, as reported by a sample of local school districts in the state.

The data presented here serves as a baseline, illustrating current patterns by sex for enrollments and staff employment. In future years, it will be possible to analyze changes in these areas, in order to determine whether measureable progress is being made toward the goal of sex equity in secondary vocational education.

## Vocational Enrollments, 1980

Total enrollments in high school vocational programs statewide in October 1980 were $145,347 . \%$ Of these, about 96 percent were enrolled in programs related to seven vocational curriculum areas, with the remaining 4 percent enrolled in special needs programs.

Vocational enrollments vary considerably by grade level, with almost half of all high school vocational enrollments at the twelfth grade level. Total enrollments are 24,445 for tenth grade, 50,621 for eleventh grade, and 64,090 for twelfth grade. Students whose grade level was not reported accounted for an additional 6,191 students.

Female students represent a slight majority of those enrolled in one or more vocational courses, 53 percent, although they represent only 49 percent of all students enrolled in grades ten through twelve statewide. Enrollment patterns generally do not vary by grade level, although females are slightly more likely than males to be enrolled in a vocational program at the higher grade levels.

Minority race students represent 3.6 percent of those enrolled in one or more vocational courses, slightly lower than their representation among all students enrolled in grades ten through twelve, 4.1 percent. Minority females, like their white counterparts, are slightly more likely to be enrolled in vocational courses than are minority males.

SECONDARY VOCATIONAL ENROLLMENTS, 1980

145,347 ENROLLMENTS
*This figure as well as other enrollment data in this report may represent - 4 - a duplicated count of students, since some students may be enrolled in more than one vocational course at a time.

## Enrollment by Curriculum Area, 1980

Significant differences occur among the vocational curriculum areas, both for overall enrollments and for enrollment patterns by sex and race. The chart below summarizes these differences, and the following pages present more detailed information for each program area.

As might be expected, male students are most likely to be enrolled in trade and industrial programs. This area, combined with agriculture programs, accounts for 59 percent of all male vocational enrollments. By contrast, less than 10 percent of females are enrolled in trade and industrial and agriculture programs combined.

Female students are most likely to be enrolled in home economics programs, representing more than half of all female enrollments. Office occupations programs represent an additional one-fourth of all female students. By contrast, less than 20 percent of the male enrollees are in home economics and less than 10 percent are in office occupations.

Enrollment patterns of minority students also vary by sex. Home economics accounts for half of all vocational enrollments of minority females, but for only 21 percent of minority males. Trade and industrial courses account for more than one-third of all vocational enrollments among minority males, but for only 6 percent of minority fernales.

## SECONDARY vocational enrollments, 1980 male figmale

| AGRICULTURE | MrMillimiocid | 14.4\% |
| :---: | :---: | :---: |
| DISTRIBUTION | InMMU | 5.5\% |
| HEALTH | 4 | 2.3\% |
| HOME ECONOMICS | н宜 | 35.5\% |
| OFFICE |  | 19.3\% |
| TECHNICAL | 1 | 0.5\% |
| TRADE \& INDUSTRIAL |  | 18.2\% |
| SPECIAL NEEDS | M ${ }^{\text {P\% }}$ | 4.3\% |

Each figure represents 1\% of total enrollments, or 1,453 enrollees.

## Agriculture

Total enrollment statewide in high school agriculture courses is 20,983, accounting for 14 percent of all high school vocational enrollments.

Agriculture courses are predominantly male, with male students outnumbering female students by five to one at all grade levels. More than half of female students are enrolled in Agricultural Production, Animal Science, or Ornamental Horticulture, while more than half of male students are enrolled in Agricultural Production, Farm Management, and/or Agricultural Mechanics.

Enrollments in this area show a more significant difference by race than any other curriculum area, with agriculture accounting for 15 percent of all white students but for only 5 percent of all minority students in vocational programs. Minority enrollment in this area generally reflects the lower representation of minorities in Minnesota's non-metropolitan farm population.

Minority female students are even less likely than their male counterparts to be enrolled in agriculture courses. This curriculum area accounts for less than 2 percent of minority female vocational students, 5 percent of white female students, 7 percent of minority male students, and 27 percent of white male students.

AGRICULTURE ENROLLMENTS, 1980

20,983 ENROLLMENTS

## Distributive Education

Total enrollment statewide in high school distributive education courses is an even 8,000, accounting for 6 percent of all secondary vocational enrollments.

Although female students have a slightly larger total enrollment than males, distributive education is the most evenly balanced by sex of all the curriculum areas. This is particularly true for eleventh and twelfth grade enrollments, while tenth grade enrollments are primarily female. As in other curriculum areas, most distributive education students are in the twelfth grade.

Two programs, General Merchandising and General Marketing Occupations, account for more than half of male enrollments and for more than half of female enrollments in this area -- and both courses are fairly evenly balanced by sex. One distributive education course has no male students and one course has no female students.

About 3 percent of all distributive education students are minorities, very close to the overall representation of minority students in vocational programs. Like their white counterparts, minority females are slightly more likely than minority males to be enrolled in this curriculum area.

## distributive education enrollments, 1980

8,000 ENROLLMENTS

## Health Occupations

Total en rollment statewide in high school health occupations programs is 3,32l, accounting for less than 3 percent of all vocational enrollments. After technical education, health occupations have the smallest number of high school students enrolled.

Health programs are predominantly female, with female students outnumbering male students by almost three to one overall. This pattern is most apparent at the eleventh and twelfth grade levels, which together account for 93 percent of health occupations students. Tenth grade health programs are fairly evenly balanced by sex.

More than half of all health students are enrolled in the general Health Care Occupations program. Almost three-fourths of all female health students are enrolled in this program, but only 11 percent of male health students are enrolled in Health Care Occupations.

Minorities account for 1.4 percent of health students. Both male and female minority students are slightly less likely than white students to be enrolled in this curriculum area, with the number of minority females exceeding the number of minority males.
health occupations enrollments, 1980

3,321 ENROLLMENTS

## Home Economics

Total enrollment statewide in high school home economics courses is 51,557, accounting for 35 percent of all secondary vocational enrollments. Home economics has the largest number of female students, and the largest total number of students, of all curriculum areas. Nine out of 10 of these enrollees are in consumer homemaking programs, with the remainder in occupational home economics.

Female students outnumber male students by three to one at every grade level in home economics programs. Each individual course has more female students than male students, although there are no femaleonly courses.

Two programs, Consumer Homemaking and Consumer Foods and Nutrition, account for half of female enrollments and for two-thirds of male enrollments. Both courses, however, have more female students than male students. Other programs with large enrollments of female students are Child Development, Clothing and Textiles, and Family Relations.

Overall enrollments of minority students in home economics is the same as for whites -- 36 percent -- and for each racial group there are more female enrollees than males. Minority females enrolled in home economics account for about half of all female minority vocational enrollments, the same proportion as for white females.
home economics enrollments, 1980

51,557 ENROLLMENTS

## Office Occupations

Total high school enrollment statewide in.office occupations programs is 28,043 , accounting for about one-fifth of all secondary vocational enrollments. Office occupations has higher total enrollments than any other area except home economics.

Female students outnumber male students by more than three to one in eleventh and twelfth grade office occupations programs, and these grade levels account for 81 percent of enrollments in this area. Courses are somewhat more balanced at the tenth grade level, where female students outnumber male students by about two to one.

Female students are fairly evenly distributed among the various programs, but they are more likely to be enrolled in General Secretarial or Stenographer/Secretary than in other programs. They represent the majority of students in all programs except Data Processing II, Business Law, and Economics. Four courses have no male students: Medical Clerical, Traffic Office Clerk, Court Reporter, and Legal Secretary.

Overall, minority students are slightly less likely than white students to be enrolled in office occupations programs. This curriculum area accounts for 28 percent of white female students, 24 percent of minority female students, 10 percent of white males, and 12 percent of minority males.

## OFFICE OCCUPATIONS ENROLLMENTS, 1980

28,043 ENROLLMENTS

## Technical Education

Total enrollment statewide in high school technical education programs is 791, accounting for one-twentieth of all secondary vocational enrollments. This curriculum area is unique in two ways: it contains the smallest number of students of all curriculum areas, and enrollments in technical programs are the least balanced by sex.

Male students account for 95 percent of twelfth grade technical students, 97 percent of eleventh grade technical students, and 91 percent of tenth grade technical students. Like all other curriculum areas, the majority of technical students are in the twelfth grade.

Electronics Technology accounts for about half of male students but only 11 percent of female students enrolled in technical education programs, while Automotive Technology accounts for 27 percent of male students and 24 percent of female students. These programs account for the majority of all students.

Male students outnumber female students in every program except Food Lab Management, and four programs have no female students.

About 1 percent of technical students are racial minorities, with no female minority students enrolled in this area. Although overall enrollments of technical students are so low that differences may not be statistically significant, minority males appear to be less likely than white males to be enrolled in these programs.

## TECHNICAL OCCUPATIONS ENROLLMENTS, 1980

791 ENROLLMENTS

## Trade \& Industrial

Total enrollment statewide in high school trade and industrial programs is 26,428 , accounting for one-fifth of all secondary vocational enrollments. More male students, however, are enrolled in this area than in any other vocational area, representing one out of three male students. Trade and industrial also has the largest number of program offerings.

Overall, male trade-industrial students outnumber female tradeindustrial students by six to one. This ratio varies somewhat by grade level, with a larger proportion of female students at the twelfth grade level.

Ten programs have no female students and five programs have only one female student. Female students have the highest enrollments in Graphic Arts, Auto Mechanics, Woodworking, and Other Trade-Industrial, which together account for half of all female students.

Male students are most likely to be enrolled in Auto Mechanics, Carpentry and Finishing Trades, Construction and Maintenance Trades, and Other Trade and Industrial Occupations, together accounting for 40 percent of all male students. Personal Services has only one male enrollee, and Cosmetology has no male enrollees.

Although the majority of trade-industrial students are white males, minority students -- both male and female -- have slightly higher enrollment rates than their white counterparts. Trade and industrial enrollments account for 5 percent of white females, 6 percent of minority females, 33 percent of white males, and 37 percent of minority males.

TRADE \& INDUSTRIAL ENROLLMENTS, 1980

26,428 ENROLLMENTS

## Special Needs

School districts report enrollments of students who can be identified as physically handicapped, economically disadvantaged, and/or who have limited English proficiency, for each occupational program. These figures, like all enrollment data in this report, may refer to a duplicated count of students.

Although female students represent 53 percent of total vocational enrollments in secondary schools, their representation is somewhat lower among the identified disadvantaged groups. Females account for 42 percent of the 4,671 handicapped enrollees, 43 percent of the 467 limited English enrollees, and 48 percent of the 12,793 economically disadvantaged enrollees.

In addition to the seven occupational curriculum areas as described previously, "special needs" programs have been established in the secondary schools to provide additional vocational activities. Included in these programs are work experience programs for career exploration, for the disadvantaged, and for the handicapped. Other programs include remedial related reading and math and bilingual education.

Statewide enrollment in special needs programs is 6,224, representing 4 percent of total vocational enrollments. Of these, 41 percent are female students, well below their 53 percent representation in all vocational programs. Work Experience programs account for 87 percent of enrollments in all special needs programs, and a majority of these students are male. Female students are particularly underrepresented in the Work Experience - Career Exploration program.

Minority students are more likely to be enrolled in special needs courses than their white counterparts, reflecting their higher proportion among economically disadvantaged students. Statewide, minority females are less likely than minority males to be special needs enrollees.

SPECIAL NEEDS ENROLLMENTS, 1980

6,224 ENROLLMENTS

## Enrollments by Program Type, 1980

On previous pages, high school vocational programs have been examined and described by curriculum area. Programs can also be characterized by the relative numbers of male and female enrollees in each program statewide: program types which are designated as "segregated" by sex or as "integrated" by sex.

A segregated program is defined as one in which more than 80 percent of the students are of one sex. All other programs are defined as integrated. For example, Agricultural Production is a segregated program, with male students accounting for 86 percent of enrollments and female students accounting for 14 percent of enrollments. However, Animal Science is an integrated program, with 76 percent male and 24 percent female students.

Statewide, about half of all vocational students are enrolled in segrated programs and about half in integrated programs. Female students are more likely, however, than male students to be in integrated programs -57 percent compared to 41 percent of males.

Distributive education has the largest proportion of students in integrated programs, 92 percent of enrollments in this area, while technical education programs have the lowest proportion of students in integrated programs, 11 percent of all students enrolled in technical programs.

## EnRoLLMENT BY PROGRAM TYPE, 1980

## Traditional \& Non-Traditional Enrollments, 1980

Segregated programs may have either predominantly female or predominantly male enrollments. Students enrolled in segregated programs dominated by students of the other sex are defined as "non-traditional" students; students enrolled in programs where the total enrollment exceeds 80 percent of their own sex are defined as "traditional" students.

For example, the Nursing Assistant program, in which 97 percent of students are female while 3 percent are male, is a segregated "female" program. Female students in this program are therefore characterized as traditional students, while males in this program are non-traditional students. Similarly, Automotive Technology, where 94 percent of students are male and 6 percent are female, is traditional for male students and non-traditional for female students.

Statewide, 5 percent of vocational students are enrolled in programs which are non-traditional for their sex -- 6 percent of male enrollees and 4 percent of female enrollees. The home economics curriculum area has the largest number of non-traditional students for a total of 2,147 enrollees, or 4 percent of all home economics students. Technical programs have the smallest number of non-traditional students for a total of 19 enrollees, or 2 percent of all technical students.

## Enrollment by program type, 1980

## High School Follow-Up, Class of 1979

A selected sample of school districts report information about the status of their former students one year after graduation. This information was reported in 1980 by 111 Minnesota schools for students in the Class of 1979 , who completed a total of 20,437 questionnaires.

About half of former high school students continue with their education in the year after graduation, while the other half are not enrolled in any post-secondary program. Female former students are slightly more likely than their male counterparts to continue their education, while male former students are more likely to be employed.

Of the students who do continue their education after high school, about one-fourth attend a vocational school, usually one of the public Area Vocational-Technical Institutes (AVTIs). Male students, however, are more likely than females to attend an AVTI, while females are somewhat more likely than males to attend a private vocational school.

The majority of former high school students, both male and female, are likely to hold paid employment in the year following graduation. Slightly over one-third of both males and females have paid employment only, while an additional one-quarter of both males and females combine employment with further education. Most former high school students with paid employment hold full-time jobs, although female students are more likely than male students to work part-time.

IN SCHOOL, WITH PAID EMPLOYMENT

IN SCHOOL, NO EMPLOYMENT

OTHER, INCLUDING UNEMPLOYED

## Vocational Student Follow-Up, Class of 1979

Followup information on education and employment status is also available for students who were enrolled in vocational programs during high school. In this report, such students are called "vocational graduates," although they may have taken only one vocational course in high school and they may have left school without receiving a diploma.

Overall, about one-sixth of both male and female vocational graduates are enrolled in post-secondary vocational education, while about two-thirds have paid employment one year later. Male vocational graduates are slightly more likely than their female counterparts to go on to vocational school.

The most significant differences between male and female vocational graduates, however, is in occupational group and earnings. Regardless of which curriculum area students were enrolled in during high school, female students are most likely to be clerical or service workers and male students are most likely to be employed in construction, transportation, mechanics, or production.

Female graduates have lower earnings than male graduates, and are more likely to have earnings under $\$ 4$ per hour, regardless of high school curriculum area. Male graduates have the highest earnings -- a median of $\$ 4.82$ per hour -- if they took a service occupations course, probably accounted for by the large proportion in protective services such as police or fire officers. Female graduates have the highest earnings -a median of $\$ 3.93$ an hour -- if they took a trade and industrial program.

HIGH SCHOOL CLASS OF 1979, EMPLOYED ONE YEAR LATER

## Vocational Staff Patterns, 1980

Statewide, a total of 1,714 vocational teachers are employed at the secondary level in the seven curriculum areas -- 1,367 full-time teachers and 347 part-time teachers. Of these, 54 percent are men and 46 percent are women. In addition, there are 78 women and 173 men in program support services or who are not classified by curriculum area.

Home economics, trade and industrial, and office occupations programs account for the largest number of teachers as well as the largest number of enrollments. Teacher representation by sex in the curriculum areas corresponds generally to student enrollments, although teachers are more likely than students to be in areas traditional for their sex.

In agriculture, for example, 16 percent of students but only 7 percent of teachers are female. In both office occupations and home economics, males represent 24 percent of enrollments but less than 2 percent of the teachers.

Minorities are underrepresented among vocational teachers, accounting for only 1 percent of teachers compared with 4 percent of vocational student enrollments. In addition, there is only one minority vocational administrator in the secondary schools or the secondary centers.

Overall, there are a total of 79 vocational administrators and supervisors at the secondary level. Of these, 13 percent are women while 87 percent are men.

SECONDARY VOCATIONAL TEACHERS, 1980 MALE 埌FEMALE

| AGRICULTURE |  | 14.9\% |

## Definitions

Enrollment. In this report, enrollment figures other than those for individual courses may represent a duplicated count of students, since some students may be enrolled in more than one vocational course at a time. All enrollment data in this report is statewide.

Curriculum Area or Program Area. These terms refer to groupings of programs into eight areas: Agriculture, Distributive Education, Health Occupations, Home Economics (including both Consumer Homemaking, 0901 XX, and Occupational Home Economics, 0902XX), Office Occupations, Technical Occupations, Trade E Industrial, and Special Needs. Followup data contains an additional curriculum area, Service Occupations.

Racial Minorities. Minority student data reported by school districts to the Minnesota Civil Rights Information System does not denote scientific definitions of anthropological origins. No person is counted in more than one racial/ethnic category. Minorities identified by this system are: American Indian or Alaskan Native; Asian or Pacific Islander; Hispanic, referring to country of origin or culture, not race; Black, not of Hispanic origin; and White, not of Hispanic origin.

Course or Program. These terms refer to individual course offerings within curriculum areas. All course or program data in this report represent statewide enrollments by subject or grade level, not by individual school district.

Exceptional Students. These figures refer to students identified as belonging to one or more of three special categories: physically handicapped; limited English proficiency, meaning students who do not speak and understand English well enough to benefit from vocational studies to the same extent as students whose primary language is English; and economically disadvantaged, referring to students who are participating in a free or reduced lunch program, Aid to Families with Dependent Children program, or work-study program. Exceptional students may or may not be enrolled in a Special Needs program.

Segregated. A segregated program or course is one in which more than 80 percent of the students are of one sex. A segregated "male" program has enrollments which are more than 80 percent male, while a segregated "female" program has enrollments which are more than 80 percent female.

Integrated. All programs which are not segregated by sex are considered integrated.

Traditional. Students enrolled in programs where the total enrollment exceeds 80 percent of their own sex are defined as traditional students.

Non-Traditional. Students enrolled in segregated programs dominated by students of the other sex are defined as non-traditional students.

## Definitions, continued

Vocational Teachers. Vocational teachers are staff members assigned the professional activities of instructing pupils in vocationally reimbursed programs. In this report, this term refers to teachers in secondary cooperative vocational centers as well as high school vocational teachers.

Program Support Services Staff. This refers to individuals employed for the primary purpose of assuring that students benefit from their vocational education programs, such as teacher aides, remedial teachers, and interpreters for deaf students.

Vocational Administrators and Supervisors. This refers to professional staff other than teachers and support services staff who are assigned to the supervision of vocational education programs. This does not include general administrative staff, superintendents, principals, or guidance counselors.
