## Introduction

High School vocational education provides students with training for the world of work, and with opportunities to develop interests and skills which will be useful to them in pursuing further education. To a large extent, secondary-level vocational students represent the future of Minnesota's labor force.

All available evidence shows that dramatic changes are occurring in the labor market -- new industries are developing rapidly, and new occupations are being created in older industries. The most significant change, however, is the increasing employment of women.

More than 60 percent of all working-age women in Minnesota are now employed, including two-thirds of all mothers and half of all mothers with preschool-age children. Women now represent 43 percent of the workforce.

Are high school girls being prepared to support themselves throughout their adult lives? Are high school boys being prepared to assume new roles in the home, as well as in the labor market?

This report provides information about the status of male and female students in high school vocational training during the 1981-82 school year. It is the second in a series of reports about sex equity in secondary-level vocational education. The report was prepared by the Council on the Economic Status of Women under contract with the Vocational-Technical Division of the Minnesota Department of Education.

The format of this report is similar to that of "Vocational Education Sex Equity Report: Secondary, 1981." Enrollment patterns are presented by program type and by curriculum area, to determine the numbers of male and female students in traditional and nontraditional career preparation. Information is also included about special needs programs, minority student enrollments, high school vocational graduates, and about secondary-level vocational staff. A detailed appendix provides comprehensive data in each of these areas, including a course-by-course statewide enrollment listing for each curriculum area.

Most of the data presented here were made available through the Minnesota Civil Rights Information System, or MINCRIS, as reported by local school districts to the Minnesota Department of Education. Student follow-up information was made available by the Minnesota Research and Development Center for Vocational Education, as reported by a sample of local school districts in the state.

The MINCRIS system has provided comprehensive data for students in grades nine through twelve for the 1981-82 school year. However, because ninth-graders were included for the first time in this year, and because of other improvements in the data collection, it is not possible to make accurate comparisons of the 1981-82 data with data from the previous year.

## Vocational Enrollments; 1981

Statewide enrollments in high school vocational programs in October 1981 were 193,325. Vocational enrollments vary considerably by grade level, with eleventh and twelfth graders accounting for almost two-thirds of all vocational students. An additional 15 percent of vocational students are ninth and tenth graders, while 21 percent are high school students enrolled in vocational courses at an AVTI.*

Female students represent a slight majority of those enrolled in one or more vocational courses, at 50.4 percent. Female and male enrollments are fairly well balanced at the ninth and tenth grade levels, but less balanced at other levels. Female students are 53 percent of eleventh and twelfth grade enrollees, but only 42 percent of those attending an AVTI. (See Table 1)

Minority race students represent 5.4 percent of those enrolled in one or more vocational courses. Minority female students are less likely than minority male students to be enrolled in vocational programs, with minority fenales accounting for 47 percent of all minority enrollments. (See Tables 2 \& 3)

SECONDARY VOCATIONAL ENROLLMENTS, 1981

198,325 ENROLLMENTS

[^0]
## Enrollments by Program Type, 1981

High school vocational programs can be characterized by the relative numbers of male and female enrollees: program types which are designated as "segregated" or "integrated." By definition, a segregated program is one in which more than 80 percent of the students are of the same sex. All other programs are defined as integrated.

For example, Production Agriculture is a segregated ''male' program, with male students accounting for 86 percent of enrollments. The Nursing Assistant program is a segregated 'ffemale' program, with female students accounting for 91 percent of enrollments. Supermarket Merchandising, in which 65 percent of students are male and 35 percent are female, is an integrated program.

Enrollments in segregated programs are either "traditional" or "nontraditional." Traditional students are those in a program where the total enrollment exceeds 80 percent of their own sex; non-traditional students are those enrolled in a program where over 80 percent of the students are of the other sex. Female students in Production Agriculture are non-traditional students, as are male students in the Nursing Assistant program.

There are a total of 355 courses offered statewide. Of these, 145 are "male" courses, 88 are "female" courses, and 122 are integrated courses. Just under half of all vocational students are enrolled in integrated courses, while only 6 percent of students are enrolled in a course which is non-traditional for their sex. (See Tables 4, 6, and 7)

ENROLLMENT BY PROGRAM TYPE, 1981

## Enrollments by Program Type, continued

Female students are more likely than male students to be enrolled in integrated programs -- 55 percent of female students and 31 percent of male students. Courses most likely to be integrated are those in the home economics and business-office curriculum areas.

Some fields historically considered "men's work" or "women's work" are now represented among course titles for integrated programs. Approximately equal numbers of male and female students are now enrolled in courses such as Hardware-Buildiny Materials, Dental Lab Technician, Beginning Typing, Aviation Occupations, Industrial Electronics, and Wood Finishing.

Very few students, however, are enrolled in non-traditional programs. Such programs account for only 6.5 percent of female students and only 5.5 percent of male students. The technical curriculum area has the largest proportion of non-traditional students, at 11 percent of all technical enrollees.

Of the 355 programs offered statewide, 60 or about one in six are either all-male or all-female. More than 1,000 female students are enrolled in courses with no male students, and more than 1,000 male students are enrolled in courses with no female students. (See Table 5)

EnRoLLMENT BY PRogram type, 1981

## Enrollment by Curriculum Area, 1981

Significant differences occur among the vocational curriculum areas, both for overall enrollments and for enrollment patterns by sex and race. The chart below summarizes these differences, and the following pages present more detailed information for each curriculum area.

Home economics has the largest total number of students, nearly three times as many as distributive education, health occupations, and technical education courses combined. The agriculture, office, and trade-industrial areas are roughly equal in size.

Male students are most likely to be enrolled in trade-industrial programs. This area combined with agriculture accounts for almost twothirds of all male vocational enrollments. By contrast, only 10 percent of female vocational students are enrolled in trade-industrial or agriculture programs.

Female students are most likely to be enrolled in home economics programs, representing almost half of all female enrollees. An additional 30 percent of female students are enrolled in office occupations programs. Less than one-quarter of male students are enrolled in these two areas. (See Table 8)

Enrollment patterns of minority students also vary by sex. Home economics accounts for almost half of all minority female enrollees, but for only 18 percent of minority male enrollees. Trade-industrial courses account for almost three-fifths of all vocational enrollments among minority males, but for only 7 percent of minority females.

SECONDARY VOCATIONAL ENROLLMENTS, 1981 MALE 部FEMALE

| AGRICULTURE |  | 13.3\% |
| :---: | :---: | :---: |
| DISTRIBUTION | ITMUTU | 5.5\% |
| HEALTH | $\operatorname{mos}$ | 3.6\% |
| HOME ECONOMICS |  | 31.4\% |
| OFFICE |  | 19.2\% |
| TECHNICAL | M | 2.5\% |
| TRADE \& INDUSTRIAL |  | 24.5\% |

## Agriculture

Total enrollment statewide in secondary agriculture courses is 26,457, accounting for 13 percent of all secondary vocational students.

Agriculture courses are predominantly male, with male students outnumbering female students by 5 to 1 at all grade levels. Of the 36 courses offered statewide, 25 are "male" and 11 are integrated. There are no "female" courses. Integrated courses account for 19 percent of students. After technical education, agriculture courses have a larger proportion of nontraditional students than any other area, at 10 percent of students.

The largest course is Production Agriculture/Farm Management, with 40 percent of all male agriculture students and 30 percent of all female agriculture students. The second largest course for male students is Agriculture Farm Equipment Mechanics, while the second largest course for female students is Horticulture/Specialty Crops.

Enrollments in this area show a more significant difference by race than any other, with agriculture accounting for 14 percent of all white students but for only 3 percent of all minority students in vocational programs. Minority enrollment in this area generally reflects the lower representation of minorities in Minnesota's non-metropolitan farm population.

Minority female students are even less likely than their male counterparts to be enrolled in agriculture courses. This curriculum area accounts for 2 percent of minority females, 5 percent of white females, 4 percent of minority males, and 23 percent of white males.

AGRICULTURE ENROLLMENTS, 1981

[^1]
## Distributive Education

Total enrollment statewide in secondary distributive education courses is 10,939 , accounting for 6 percent of all secondary vocational students.

Although female students have a slightly larger total enrollment than males, distributive education is the most evenly balanced by sex of all the curriculum areas. This is particularly true for eleventh and twelfth grade and for AVTI enrollments, while ninth and tenth grade enrollments are primarily female. As in other curriculum areas, most distributive education students are in the eleventh and twelfth grades.

Of the 36 courses offered statewide, 5 are "male," 11 are "female," are 20 are integrated. However, the integrated courses account for 90 percent of distributive education students. Two programs, General Merchandising and General Marketing Occupations, account for more than half of male enrollments and for almost half of female enrollments in this area -- and both courses are fairly evenly balanced by sex. Two distributive education courses have no male students and one course has no female students.

About 5 percent of all distributive education students are minorities, very close to the overall representation of minority students in vocational programs. Like their white counterparts, minority females are slightly more likely than minority males to be enrolled in this curriculum area.

10,939 ENROLLMENTS

## Health Occupations

Total enrollment statewide in secondary health occupations programs is 7,052, accounting for less than 4 percent of all vocational enrollments. Health courses have the fewest male students of all curriculum areas.

Health programs are predominantly female, with female students outnumbering male students by almost 6 to 1 overall. Although male students are in the minority at every grade level, this pattern is most apparent among students attending health courses at an AVTI. The majority of health students are enrolled in AVTI courses, unlike other curriculum areas.

Of the 44 courses offered statewide, 11 are "male," 22 are "female," and 11 are integrated. There are 4 courses with no male students, and 7 courses with no female students. However, the "female" courses account for 89 percent of all health enrollees. Seven percent of students are in courses which are nontraditional for their sex.

The Practical Nurse Education course accounts for 25 percent of female students and for 23 percent of male students in this curriculum area. However, since there are so few male students enrolled in health courses generally, these figures do not represent equal numbers of males and females in this course -- 87 percent of the Practical Nurse students are female.

Minorities account for about 4 percent of health students. While minority female students are more likely than either minority males or white males to be enrolled in health courses, they are less likely then white females to be enrolled in this area.

HEALTH OCCUPATIONS ENROLLMENTS, 1981

7,052 ENROLLMENTS

## Home Economics

Total statewide enrollment in secondary home economics courses is 62,230, accounting for 31 percent of all secondary vocational enrollments. Home economics has the largest number of female students, and the largest total number of students, of all curriculum areas.

Female students outnumber male students by about 3 to 1 overall in this area, and female students predominate at each grade level. Enrollments are most balanced among students attending an AVTI, with a female/male ratio of 2 to 1 . They are least balanced among ninth and tenth graders, where the ratio approaches 4 to 1 .

Of the 59 courses offered statewide, 5 are "male," 25 are "female," and 29 are integrated. The integrated courses, however, account for 74 percent of all home economics students. There are 8 all-female courses, and 2 all-male courses. Three percent of home economics students are enrolled in courses which are nontraditional for their sex.

A group of 15 courses are classified as "consumer homemaking." More than two-thirds of home economics enrollees are in consumer homemaking programs -- 68 percent of male students as well as 68 percent of female students.

Minority students and white students are equally likely to be enrolled in home economics, but for each racial group there are more female enrollees than male enrollees. Minority female students and white female students are equally likely to be taking home economics.

HOME ECONOMICS ENROLLMENTS, 1981

62,230 ENROLLMENTS

## Office Occupations

Total secondary enrollment statewide in office occupations programs is 38,122 , accounting for about one-fifth of all secondary vocational enrollments. After home economics, office occupations has the largest number of female students of all curriculum areas.

Female students outnumber male students by almost 4 to 1 among eleventh and twelfth grade office students, and these grade levels represent almost two-thirds of enrollments in this area. Ninth and tenth grade enrollments are somewhat more balanced, although females outnumber males by about 2 to 1 at these levels.

Of the 51 courses offered statewide, 29 are "female" and 22 are integrated. There are no "male" office courses, and 10 of the "female" courses have no male students. However, the integrated courses account for 45 percent of all enrollees, and 8 percent of students are enrolled in courses which are nontraditional for their sex.

More than one-third of male students, and one-fourth of female students, are enrolled in just two courses -- Accounting and General Office Typist.

Overall, minority students are more likely than white students to be enrolled in office occupations programs, although white females are more likely than minority males to be taking an office course. This curriculum area accounts for 29 percent of white female students, 34 percent of minority female students, 9 percent of white male students, and 12 percent of minority male students.

38,122 ENROLLMENTS

## Technical Education

Total enrollment statewide in secondary technical education programs is 5,009, accounting for about 3 percent of all secondary vocational enrollments. This curriculum area has fewer students than any other, and the smallest number of female students of all curriculum areas.

Male students account for 94 percent of ninth and tenth grade technical students, 92 percent of eleventh and twelfth grade technical students, and 87 percent of technical students at AVTIs. Eighty percent of technical enrollees are attending a course at an AVTI.

Of the 36 technical courses offered statewide, 29 are "male" and 7 are integrated. There are no female courses, and 95 percent of technical students are enrolled in the "male" courses. Three courses have no female students. However, this curriculum area has the largest proportion of nontraditional enrollments, at 11 percent of technical students, all of whom are female students enrolled in a "male" course.

The general Electronics Technician Occupations course has the largest number of male students, while Architectural Drafting has the largest number of female students. The all-male courses are Musical Instrument Repair and Communications in the Electronics Technician Occupations program, and Powdered Metallurgy.

About 4 percent of students in this area are racial minorities. Minority male students are slightly less likely than white male students to be enrolled in technical courses. Enrollments for female students are considerably lower than male enrollments in all racial groups.

TECHNICAL OCCUPATIONS ENROLLMENTS, 1981

5,009 ENROLLMENTS

## Irade \& Industrial

Tutal enrollment statewide in secondary trade-industrial programs is 48,516 , accounting for one-fourth of all secondary wotal programs Mure male students are enrolled in this secondary vocational enrollments.
counterparts by 0 to 1 . Femalr students outnumber their female and tenth grade enrollments, 13 students represent 10 percent of ninth emrollilients, and 10 percent of AVIl enrollments.

Ihere are 93 trade-industrial twice the number of any other curriculses offered statewide, almost courses, 22 are integrated courses, and area. TRADE \& INDUSTRIAL ENROLLMENTS, 1981

48,515 ENRO_LMENTS

## Special Needs

School districts report vocational enrollments of disadvantaged students: those who can be identified as physically handicapped, economically disadvantaged, and/or who have limited English proficiency. These figures, like all enrollment data in this report, may refer to a duplicated count of students.

Although female students represent just over half of total vocational enrollments at the secondary level, their representation is somewhat lower among the identified disadvantaged groups. Females are 40 percent of the 6,035 handicapped enrollees, 34 percent of the 1,488 limited English enrollees, and 44 percent of the 29,003 economically disadvantaged enrollees. (See Table 9)
"Special needs" programs have been established to provide additional vocational activities for some of these students. Included in this area are work experience programs for career exploration, for the disadvantaged, and for the handicapped, as well as remedial related reading, math, and English as a second language.

Statewide enrollment in special needs programs is 12,247. S.pecial needs enrollments are not included in total enrollment data elsewhere in this report; however, special needs enrollments are equal to approximately 6 percent of total enrollment in the seven occupational curriculum areas. Of these, 41 percent are female students, somewhat below their representation in all vocational programs. Work experience programs account for 84 percent of enrollments in all special needs programs, and male students represent 59 percent of work experience students.

Minority students are more likely to be enrolled in special needs courses than their white counterparts, reflecting their higher proportion of economically disadvantaged students. Statewide, minority females are less likely than minority males to be special needs enrollees.

SPECIAL NEEDS ENROLLMENTS, 1981

## High School Follow-Up, Class of 1980

The Minnesota Vocational Follow-Up System reports information about the status of students one year after graduation.* This information was reported in 1981 by 109 Minnesota school districts for students in the Class of 1980 , who completed a total of 19,512 questionnaires. Data on this page refer to all graduates in the sample, whether they had been enrolled in a high school vocational course or not.

Slightly over half of graduates, 56 percent, continue with their education in the following year. The women are somewhat more likely than the men to continue their education, while the male graduates are somewhat more likely to be employed.

One-quarter of those who continue their education are enrolled at a vocational school, usually one of the public AVTIs. AVTI enrollments account for 23 percent of male graduates enrolled in post-secondary schools, compared with 19 percent of female graduates enrolled in post-secondary schools. The women are slightly more likely than the men to attend a private vocational school, 7 percent compared with 4 percent.

The majority of graduates, both male and female, hold paid employment one year after leaving high school. Almost one-third of both the men and the women have paid employment only, while an additional one-quarter of. both groups combine paid employment with further education. Most of those with paid employment hold full-time jobs, although female graduates are more likely than male graduates to work part-time.

[^2]
## Vocational Student Follow-Up, Class of 1980

Followup information is also available for students who were enrolled in one or more vocational programs during high school. In this report, such students are called "vocational" graduates, although they may have taken only one vocational course.

In comparison to all high school graduates, vocational graduates are slightly more likely to be enrolled in post-secondary vocational schools. They are also slightly more likely to have paid employment.

There are no significant differences between male and female vocational graduates in these respects. Overall, about one-third of vocational graduates are enrolled in post-secondary vocational education one year later, while about two-thirds have paid employment. However, male and female vocational graduates differ markedly in their distribution among the various occupational groups, and in average earnings.

Male vocational graduates are more evenly distributed among all occupational groups. Female vocational graduates are heavily concentrated in clerical and service jobs, which together account for nearly three-quarters of the women but for only one-third of the men. The women are least likely to be employed in technical, agricultural, construction, transportation, and mechanical jobs. These five occupations account for only 3 percent of the women, but fully one-third of the men. (See Table l0)

Female vocational graduates have lower earnings than their male counterparts, regardless of high school curriculum area. Average earnings for all male vocational graduates are $\$ 4.53$ per hour, compared with $\$ 3.92$ per hour for female vocational graduates. (See Table ll)

High school class of 1980, employed one year later

HOURLY WAGES

## Vocational Staff Patterns, 1981

Statewide, a total of 1,609 vocational teachers are employed at the secondary level in the seven curriculum areas. Of these, 57 percent are men and 43 percent are women. In addition, there are 134 women and 217 men in program support services or who are not classified by curriculum area. Of the 1,609 teachers, 1,319 are full-time and 290 are part-time. Female teachers are slightly more likely than male teachers to be employed part-time.

Teacher representation by sex in the curriculum areas corresponds generally to student enrollments, but teachers are more likely than students to be in areas traditional for their sex. In agriculture, 18 percent of students but only 3 percent of teachers are female. In trade-industrial courses, 12 percent of students but less than 1 percent of teachers are female. In home economics and office courses, males represent 23 percent of students but only 20 percent of teachers.

Minorities are also underrepresented among vocational teachers, accounting for only 2 percent of teachers compared with 5 percent of vocational student enrollments. In addition, there are only two minority vocational administrators in the secondary schools and secondary centers.

Overall, there are a total of 92 vocational administrators and supervisors at the secondary level. Of these, 11 percent are women while 89 percent are men. (See Table 12)

## Definitions

Enrollment. In this report, enrollment figures other than those for individual courses may represent a duplicated count of students, since some students may be enrolled in more than one vocational course at a time. All enrollment data in this report is statewide.

Curriculum Area or Program Area. These terms refer to groupings of programs into eight areas: Agriculture, Distributive Education, Health Occupations, Home Economics (including both Consumer Homemaking, 0901 XX, and Occupational Home Economics, O902XX), Office Occupations, Technical Occupations, Trade E Industrial, and Special Needs. Followup data contains an additional curriculum area, Service Occupations.

Racial Minorities. Minority student data reported by school districts to the Minnesota Civil Rights Information System does not denote scientific definitions of anthropological origins. No person is counted in more than one racial/ethnic category. Minorities identified by this system are: American Indian or Alaskan Native; Asian or Pacific Islander; Hispanic, referring to country of origin or culture, not race; Black, not of Hispanic origin; and White, not of Hispanic origin.

Course or Program. These terms refer to individual course offerings within curriculum areas. All course or program data in this report represent statewide enrollments by subject or grade level, not by individual school district.

Exceptional Students. These figures refer to students identified as belonging to one or more of three special categories: physically handicapped; limited English proficiency, meaning students who do not speak and understand English well enough to benefit from vocational studies to the same extent as students whose primary language is English; and economically disadvantaged, referring to students who are participating in a free or reduced lunch program, Aid to Families with Dependent Children program, or work-study program. Exceptional students may or may not be enrolled in a Special Needs program.

Segregated. A segregated program or course is one in which more than 80 percent of the students are of one sex. A segregated "male" program has enrollments which are more than 80 percent male, while a segregated "female" program has enrollments which are more than 80 percent female.

Integrated. All programs which are not segregated by sex are considered integrated.

Traditional. Students enrolled in programs where the total enrollment exceeds 80 percent of their own sex are defined as traditional students.

Non-Traditional. Students enrolled in segregated programs dominated by students of the other sex are defined as non-traditional students.

Vocational Teachers. Vocational teachers are staff members assigned the professional activities of instructing pupils in vocationally reimbursed programs. In this report, this term refers to teachers in secondary cooperative vocational centers as well as high school vocational teachers.

Program Support Services Staff. This refers to individuals employed for the primary purpose of assuring that students benefit from their vocational education programs, such as teacher aides, remedial teachers, and interpreters for deaf students.

Vocational Administrators and Supervisors. This refers to professional staff other than teachers and support services staff who are assigned to the supervision of vocational education programs. This does not include general administrative staff, superintendents, principals, or guidance counselors.

## Vocational Education Sex Equity Report

## Secondary 1982

Prepared for the Minnesota Department of Education under Contract No. 94-482/3-SB-MN 82/130 by:

COUNCIL ON THE ECONOMIC STATUS OF WOMEN
400 SW, State Office Building
Saint Paul, Minnesota 55155
612-296-8590

[^0]:    * Existing data do not allow for identification by grade level of high school students enrolled in vocational courses at AVTIs. In addition, enrollment data in this report may represent a duplicated count of students, since some students may be enrolled in more than one vocational course at a time.

[^1]:    26,457 ENROLLMENTS

[^2]:    *Although all former students in the sample are referred to as "graduates" for purposes of this report, about 6 percent left high school without receiving a diploma.

[^3]:    *"Vocational graduates" means students who took at least one vocational course while in high school. (Class of 1980)
    **Numbers in parentheses indicate number of graduates reporting wages in the sample survey.
