## Introduction

The Minnesota Department of Jobs and Training quarterly publication on covered employment and wages by economic region and county has been reformatted and improved. The changes were made in response to the increasing demand for more detailed economic information about employment in Minnesota. Users familiar with the publication will note two major improvements. The data has been expanded to include two digits of industry detail wherever possible. Because of the greater detail, the possibility of violating data privacy laws has increased. To avoid this situation and to maintain the mandated confidentiality of individual firm data it was necessary to combine industries wherever there are too few firms in an industry cell. For this reason, some counties show less industry detail than others. The second major improvement is the inclusion of averages for employment and wages. This should serve as a convenient and quick reference for users.

The source of the information is data developed and analyzed by the Research and Statistics Office of the Minnesota Department of Jobs and Training. The data is selected from quarterly tax reports submitted by employers covered under the Minnesota unemployment compensation tax law. All individual employer data is confidential. The data selected is reviewed for accuracy and organized in accordance with the U.S. 1972 Standard Industrial Classification Manual. Approximately 97 percent of the total nonagricultural wage and salary employment in Minnesota is included. There are nine categories of workers excluded from coverage under Minnesota State law:

- 1) the self-employed;
- 2) farms with less than four employees in 20 weeks;
- 3) all railroad transportation employment;
- 4) insurance and real estate salespeople who work only on a commission basis;
- 5) students working for the school while a full-time student;
- 6) those employed by a church or synagogue for religious work;
- 7) minor children, spouse and parents working for the owner of a business;
- 8) elected officials at the Federal, State and Local level of government;
- 9) the Red Lake Chippewa Tribe.

## Terms

This section defines a number of key terms necessary to use this data.

The term units refers to the number of plant locations or work sites within the industry and county. For example, there are seven units of the U.S. Post Office in Morrison County.

Monthly employment is reported by job site, not residence of the employees and represents a count of workers on employer payrolls for the week including the 12th of the month.

Average employment is calculated by summing the three monthly figures and dividing by 3. Sub-totals do not necessarily add to totals because of rounding.

Total wages represent wages paid during the entire quarter.

The average weekly wage is calculated by dividing total wages paid by average employment and that figure by 13. Average weekly wage figures should be used with caution. Some industries employ more temporary or part-time workers than others and this has the affect of lowering the average weekly wage. Also, average weekly wages in some industries may be high because of bonuses paid at the end of a year, or because lower paid seasonal workers were laid off.

Unallocated employment is listed on page 29. It represents employment of traveling salespeople who have no attachment to a specific work site and those few employers who are not able to report multiple business locations separately.

## Minnesota Covered Employment Rises

Minnesota covered employment during the first three months of 1987 averaged 1,839,547. This is a total of 61,381 (3.5 percent) more jobs than were reported a year earlier. The total payroll for the period was close to \$9.4 billion, up 7.3 percent from the same quarter in 1986. On average, workers were paid \$391.75 per week compared to \$377.50 a week a year ago. Favorable weather conditions played a significant role in maintaining first quarter employment at a level higher than usual. Normally, first quarter employment declines seasonally about 3.5 percent from the fourth quarter of the preceding year. This year the seasonal decline was only 1.7 percent.

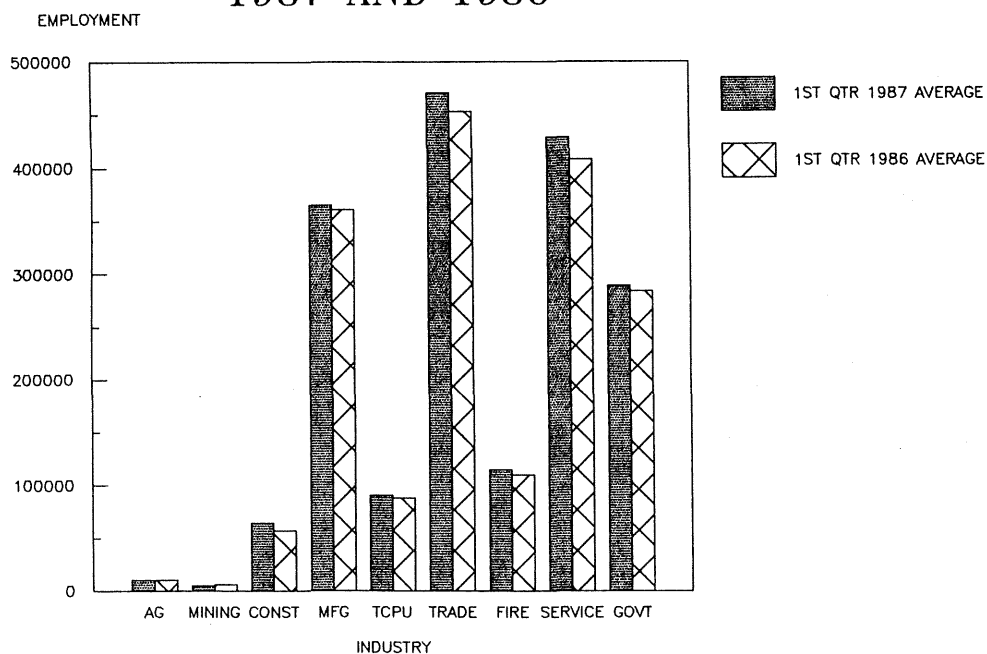

Statewide, all economic regions and all major industry divisions except Mining experienced employment growth from the first quarter of 1986 to the first quarter of 1987. The seven county Twin Cities Metropolitan Area (Region 11) dominates the Minnesota employment picture with 63.5 percent of the State's total employment, and 71 percent of the employment growth. Each of the other twelve regions accounts for only a small portion of the State's employment, ranging from 0.8 percent in West Central Minnesota (Region 6W) to 8.4 percent in Southeast Minnesota (Region 10). Most of the State's employment gain from a year ago took place in Region 11. A wide range of industries shared significant employment growth, including; construction, transportation, communications and public utilities; trade; finance, insurance and real estate; services; and government.

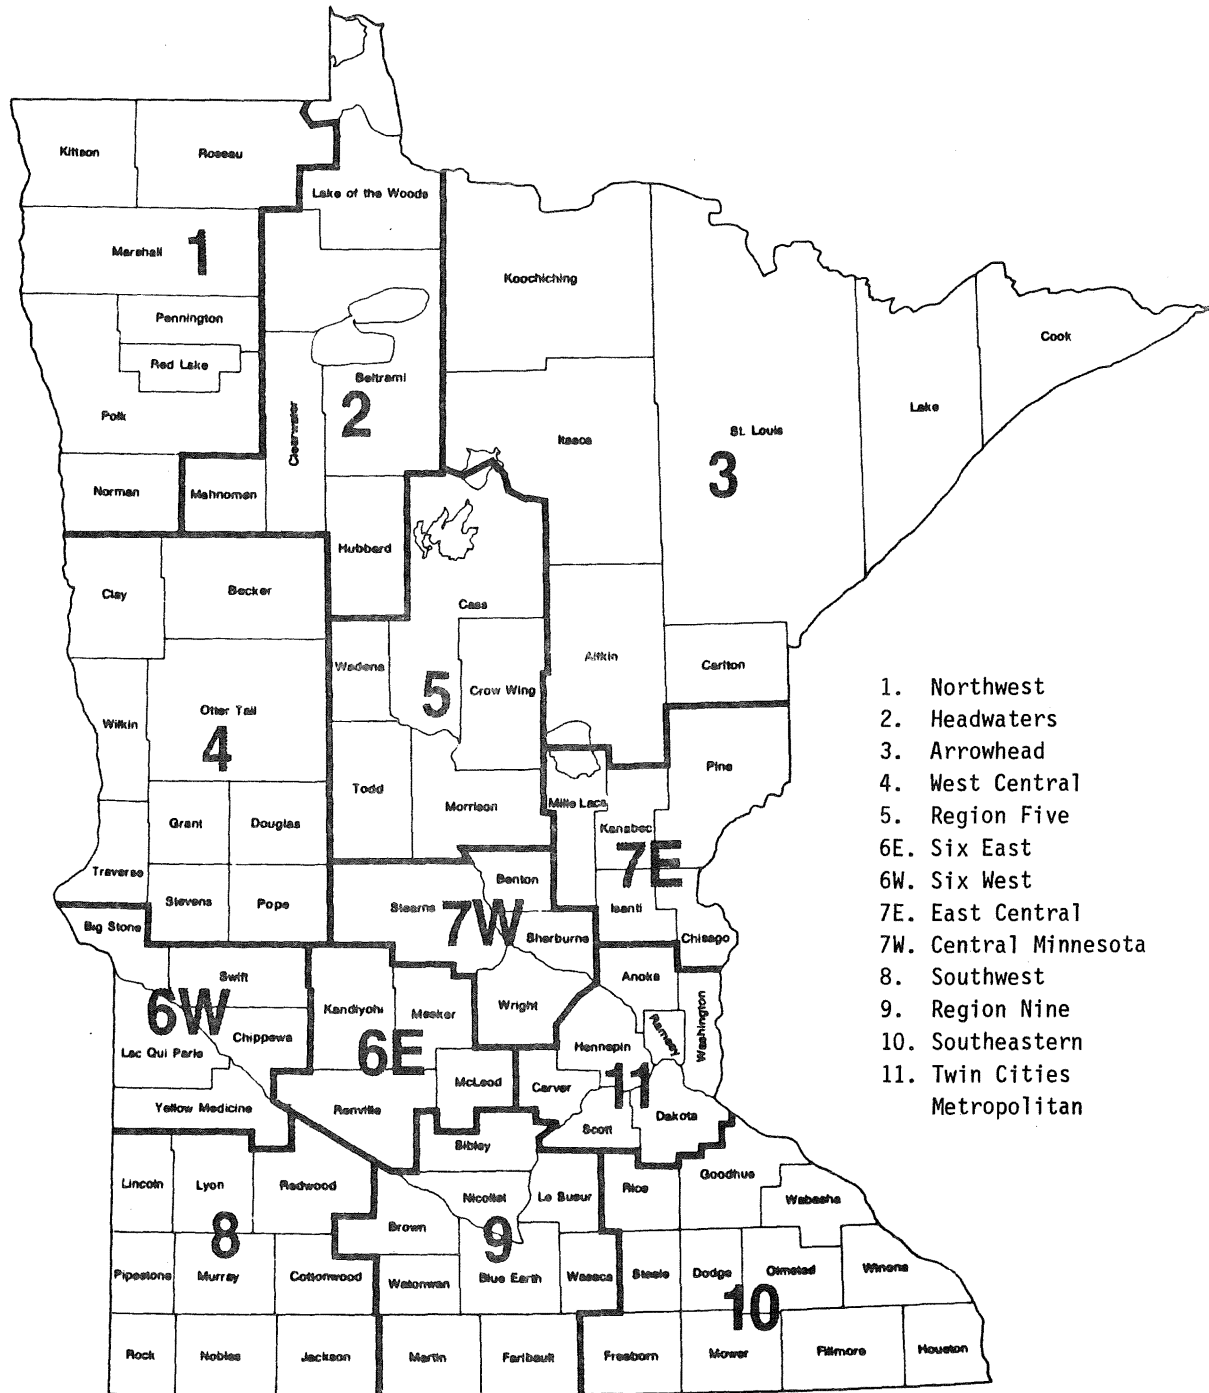

Manufacturing employment grew a modest 1.1 percent in Minnesota, an increase of 4,142 jobs. Surprisingly, only 14.0 percent of the manufacturing growth occurred in Region 11, even though this region accounts for two thirds of all manufacturing jobs. Employment reductions by large firms in non-electrical machinery, electrical machinery, and fabricated metals are the main reason for the small gain in the Twin Cities Metropolitan Region. Also, at the same time these reductions took place, employment was increasing in the same industries in Greater Minnesota.

In the Construction industry, the Arrowhead Region (Region 3) was the only region outside of the Minneapolis-St. Paul region to show any sizeable employment increase. Practically all of the Transportation, Communication, and Public Utilities employment gain took place in Region 11. A mixture of small gains and losses was the story in the other regions. Employment gains in the Trade sector came largely from general merchandise stores and eating and drinking places in the Minneapolis-St. Paul region. However, all regions experienced increased employment in eating and drinking places. In the Finance, Insurance, and Real Estate division, credit agencies, real estate companies and insurance carriers added most to an increase in employment in the division. The banking industry appears to be in a period of transition as evidenced by a downturn in employment in almost all regions except Region 11, where employment rose slightly. Services employment rose more than any other division, and again the greater share of the increase was in Region 11. In the other regions, health and business services are the major growth industries. However, employment growth also appears in other service industries such as social services, miscellaneous repair, auto repair, and membership organizations.
