Agricultural Placements	12,675	-8.0
Obtained Employment	13,886	-12.7

JOB SERVICE COMMENTARY

We have reached the end of a decade. At the end of the 1980's an overview of Job Service shows an agency which has been altered during the past ten years by administrative policy changes, current economic realities, and structural alterations in the labor force.

Administratively, budget restrictions have resulted in staff reduction, consolidating of locations, and attempts to further maximize efficiency by utilizing group intake registrations, self help procedures, and common intake forms. Increased computer capabilities have led to functions such as electronic job matching between job applicants and job openings to speed up job referrals and placements.

Economic influence on Job Service includes the decline in agricultural jobs. Both continuing mechanization and the weather have contributed to the decline of jobs possibilities. There are fewer labor intensive jobs requiring unskilled labor (mainly youth or migrants). Drought has affected crops, and the need for labor, during several recent years.

The other altering force on Job Service has been the ageing of the population. Youth are declining in numbers and as a percentage of available workers. For Job Service this has been dramatic (See Figure 2). The reduced number of youth has meant that many of the entry level jobs which have traditionally been filled by youth are now hard to fill. Employers are offering bonuses, higher pay, and are attempting to get retired people to fill this gap. This has been only partly successful.

With this as background, we can focus on what has occurred this past year. For Program Year 1989 Job Service data, as highlighted above, shows substantial declines in activities levels during a stable economic period. Practically all reportable types of transactions have registered drops from the previous year.

Overall, applicant registrations have increased slightly from last year (+1.4 percent), job referrals have risen greatly, and all other activities have fallen significantly. This compares closely to recent previous years. Job Service Activities, on a yearly basis, have been gradually declining from the peak years created in 1983 and 1984 by the economic recovery from the 1982 recession.

Changes in applicant supply seem to have reached a plateau. Although the yearly total is low by previous standards, the past three program years have had very similar totals. A measure of this can be seen in Figure 1. Monthly variations in new applications between this year and the previous program year are shown as Figure 3. The general pattern is the same for both years, with only minor monthly variations.

Job referrals continue to increase. With supporting evidence this could be viewed as a positive indicator that conditions are improving. This is not the case. Job openings received and job placements are down from last year. Comments from staff working with the public indicate that more jobs are now being rejected by job applicants than ever before. Experienced workers are not accepting marginal jobs with low pay or poor conditions. The absence of youth to fill these entry level positions means that Job Service staff must work harder to fill many of these jobs. Figure 7 shows that nonagricultural referrals this year were much higher for much of the year compared to Program Year 1988. Yet the placement totals by month lagged below last year. (See Figure 8). The nonagricultural placement total is the third lowest of any year since the current data series began in 1950. Only Program Year 1970 (62,474) and Program Year 1971 (63,819) had fewer nonagricultural placements than Program Year 1989.

With the decline of agricultural job openings in recent years, nonagricultural job openings become more important to Job Service. Figure 4 shows how nonagricultural job openings have fared over the last ten years. There has been some decline from the last two years. However, the Program Year 1989 figure is respectable compared to the ten year average. The monthly counts of nonagricultural openings received in 1988 and 1989 is shown in Figure 5. This indicates that the over-the year decline was spread throughout the year, not concentrated due to one unusual event or mass hiring in Program Year 1988.

Figure 9 showing job openings received and filled by general occupations indicates that Job Service continues to do well at filling openings for packaging/material handling, processing, and farm/fishing/forestry. Job Service filled over 80 percent of all domestic, processing, and farm/fishing/forestry job openings received, and over 70 percent of the material handler positions. The overall percentage of jobs filled has increased slightly from last year. This is a good sign. Many of the current job openings listed are now considered hard-to-fill undesirable jobs. To maintain the percentage of jobs filled at the current level is very positive for Job Service staff. The average wage paid on job placements was \$5.37 per hour this year. Last year the average was \$5.06 per hour. Clerical openings received are almost identical to last year. Only professional job openings increased significantly, up 8.3 percent from last year.

One group which has been of increasing importance over the past two years, and especially so during the last six months, is the unemployment insurance claimant registering with Job Service. This was reported in the Calendar Year 1989 publication and since then the concentration of UI claimants has continued to rise. For Program Year 1989, 28.2 percent of all new applications were UI claimants. Only 18.5 percent of renewals were UI claimants. This shows that Job Service is receiving many people recently let go from long term employment, since they are new registrants. The number of UI claimants as new applicants rose 27.2 percent from the previous program year.

Unemployment insurance claimants are still under represented in placements. Claimants accounted for 11.9 percent of the nonagricultural placements Job Service made this past year, up from 10.0 percent the previous year. To enhance the changes of finding employment, unemployment insurance claimants have used some services provided by Job Service in their job search. This is indicated by the fact that they accounted for 36.3 percent of all obtained employment transactions. They were also 40.7 percent of persons in job search workshops, 44.1 percent of all counseling interviews and 34.9 percent of the referrals to supportive services.

Data on employer contacts detailed by area office is no longer available. Job Service stopped maintaining this information after December 1989.

In reviewing the basic data for this publication a typing error was found in last year's publication. The total for renewals on page 1 of the PY 1988 Summary, under Intake Activities, should be 117,308 transactions, not 177,308.
