Main commodity:	Clay/Shale	Location comments:	At Centerville (1); (1., R. locations determined from Ref. 1, plate 45)
County:	Aitkin	Uses of commodity:	Bricks (1)
Status:	Inactive	References:	1) Winchell; Upham. 1888, p. 424, plate 45
Location:	T 47 R 27 W		
Location comments:	Near the town of Aitkin (1); (T., R. locations determined from county highway map)	Main commodity:	Clay/Shale
Uses of commodity:	Bricks (1)	County:	Anoka
Remarks:	At least four brickyards operated near the town	Date opened:	1879 (1)
	of Aitkin between 1884 and 1910 (1)	Status:	Inactive
References:	1) MN Business Gazette, referenced data	Location:	T 31 R 24 W
		Location comments:	Coon Creek (1-9); (T., R. locations determined from Ref. 7, plate 45)
Main commodity:	Clay/Shale	Description:	Red drift (1,3,4); slightly calcareous brown glacial clay (2); gray laminated clay (7)
County:	Aitkin	Chemical analyses:	See Ref. 8, p. 398 for chemical analyses
Date opened:	1890 (1)	Physical test data:	See Ref. 1, p. 65-68, Ref. 5, p. 59 and Ref. 8, p.
Status:	Inactive		113-118 for test data
Location:	T 47 R 27 W Sec 24 (1)	Uses of commodity:	Brick, tile (6)
Location comments:	At the northeast edge of Aitkin; (Ref. 1 states township as 46 but the town of Aitkin is actually in township 47)	Remarks:	At least seven brickyard operators have been located at Coon Creek (1-9)
Description:	"The pit is so close to the banks of the river that probably a considerable proportion of the clay used was alluvium, but the deposit extends so far in all directions that most of it must be classed as a lake deposit." (1)	References:	 Grout; Soper. 1914, p. 64-68 Burchard. 1910, p. 289 Grout. 1947, p. 6 Grout. 1916, p. 187 Prokopovich; Schwartz. 1957, p. 59 Schwartz; Thiel. 1954, p. 183
Physical test data:	See Refs. 1 and 2 for test data		7) Winchell; Upham. 1888, p. 423, plate 45
Uses of commodity:	Common brick (1,2)		8) Grout, 1925, p. 398 9) Grout, 1919, p. 113, 118
References:	1) Grout. 1919, p. 111, 112 2) Grout; Soper. 1914, p. 63, 64		a) Glout, 1919, p. 113-118
		Main commodity:	Clay/Shale
Main commodity:	Clay/Shale	County:	Anoka
County:	Anoka	Status:	Inactive
Date opened:	1879 (1)	Location:	T 31 R 24 W Sec 15 (1)
Status:	Inactive	Location comments:	Old pit near Northern Pacific Railroad tracks (1)
Township name:	Fridley (1)	Description:	Laminated glacial lake clay (1)
_ocation:	T 30 B 24 W Sec 34 S1/2 (1)	Physical test data:	See Ref. 1 for test data
Location comments:	About two miles north of Minneapolis (1); (T., R. locations determined from county highway map)	References:	1) Prokopovich; Schwartz. 1957, p. 9, 59
Description:	Modified drift forming the east bank of the Mississioni River (1)	Main commodity: County:	Clay/Shale. Anoka
Jses of commodity	Bricks (1)	Date opened:	1871 (1)
Remarks:	Two brick-making operations were active at this	Status:	Inactive
icinarks.	location in 1880 (1)	Township name:	Grow (1)
leferences:	1) Winchell; Upham. 1888, p. 423	Location:	T 32 R 24 W
		Location comments:	On the west side of Round Lake, two miles northeast of Anoka (1); (T., R. locations determined from Ref. 1, plate 45)
Main commodity:	Clay/Shale	Description:	Levelly statified clay (1)
County:	Anoka	Physical test data:	See Ref. 2, p. 118 for test data
Status:	Inactive	Uses of commodity:	Cream-colored bricks (1)
_ocation:	T 31 R 22 W	Remarks:	References indicate at least five brickyard operators were located near Anoka

References:	 Winchell; Upham. 1888, p. 423, plate 45 Grout. 1919, p. 118 Grout. 1947, p. 4 MN Business Gazette. referenced data compiled from NRRI 	Date opened: Status: Past operator/owner: Location:	1878 Inactive Shaw and Martin (1888) (1) T 139 R 41 W OR
Main commodity:	Clay/Shale	Location comments:	In Detroit (Detroit Lakes), about a third of a mile south of the town (1); (T., R. locations
County: Status:	Anoka Inactive	Description:	determined from county highway map) "The clay used seems to be an alluvial deposit = "(1)
Location: Location comments:	South of intersection of Hwy. 10 and 56 (1,2); 1.8 miles south of intersection (2); (T., R. locations determined from county highway map)	Uses of commodity: Remarks:	Bricks (1) The color of the brick varies from yellowish to red, depending on the position in the kiln (1)
Description: Remarks:	Glacial lake clays (1) Pit (1)		1) Winchell, Opham. 1000, p. 000
References:	1) NRRI. compiled referenced data 2) Prokopovich; Schwartz. 1957, p. 59	Main commodity: County: Status:	Clay/Shale Becker Inactive
Main commodity: County:	Clay/Shale Becker	Location:	T 142 R 41 W OR T 142 R 42 W
Status:	Inactive	Location comments:	Near Ogema (1,2); (T., R. locations determined from county highway map)
Location.	T 138 R 41 W	Description: Uses of commodity:	Swamp or lake clay (1,2) Bricks (1,2)
Location comments:	Near the town of Detroit (Detroit Lakes) (1,2); (T., R. locations determined from county highway map)	Remarks:	"Very attractive and durable bricks were made, though a few lime pebbles are visible." (2)
Uses of commodity:	Bricks (1)	References:	1) Grout. 1919, p. 118, 119 2) Grout; Soper. 1914, p. 68, 69
	of Detroit (Detroit Lakes) between 1906 and 1918 (1)	Main commodity:	
References:	1) MN Business Gazette. referenced data compiled by NRRI	County: Date opened: Status:	Becker 1879 (1)
Main commodity:	Clay/Shale	Past operator/owner:	Thomas J. Martin (1888) (1)
County: Status:	lnactive	Location: Location comments:	T 142 R 41 W Near White Earth (1,2); at the White Earth
Location:	T 139 R 41 W OR T 138 R 41 W		Agency, about 15 rods northeast from the agent's house. (1); (T., R. locations determined from county highway map)
Location comments:	Along the Minneapolis, St. Paul and Sault Ste. Marie Railway (1); about a mile south of the station at Detroit (Detroit Lakes) (1,2); (T., R.	Description: Uses of commodity:	Glacial clay (1); swamp or lake clay (2,3) Bricks (1-3)
	nocations determined from county highway map)	Remarks:	"Very attractive and durable bricks were made though a few lime pebbles are visible." (3)
Description: , Uses of commodity: Remarks:	Gray drift (1,2) Bricks (1,2) The clay contained many limestone pebbles (1,2)	References:	1) Winchell; Upham. 1888, p. 655 2) Grout. 1919, p. 118, 119 3) Grout; Soper. 1914, p. 68, 69

| Chemical analyses:   | See Ref. 1, p. 127 and Ref. 2, table 4, p. 55 for<br>chemical analyses                                                                                                                                                                                                                    | Location comments:   | Located in the Northwest Angle of Lake of the<br>Woods County (1-3,5); see Ref. 1, fig. 24 and<br>fig. 25, and Ref. 6 for location maps                                                                                                                                                                  |
| Remarks:             | "Some years ago a quarry and crushing plant<br>were established at the west side to produce<br>abrasive, but evidently the discovery that the<br>material was feldspar ended the scheme." (2);<br>when the quarries were opened, the feldspar<br>was apparently mistaken for corundum (3) | Description:         | "Pegmatite was once mined by W.C. Rader for<br>feldspar which occurs in large crystals, 1 foot of<br>more in length. Feldspar is white albite, but<br>there is also pink microcline-perthite. Both<br>feldspars are intergrown with quartz. Muscovite<br>is in large books, but most is not of commercia |

| Township name: | High Forest | | |
| Location: | T 105 R 14 W Sec 31 | | |
| Location comments: | Quarry on the north bank of Root River (1); (T.,
R. locations determined from Ref. 1, plate 11) | | |
| Geologic age: | Ordovician | | |
| Geologic formation: | Galena Gp. (1,2) | | |
| Description: | "This rock is exposed for twenty-five feet, and is
dolomitic, more or less concretionary, with
small, spar-lined cavities. It is sparingly
fossiliferous. The upper six feet are much
broken up. The remainder is compact and
unevenly bedded. The concretionary structure
is not visible on fresh surfaces. It is brought out
by weathering and especially by burning, and
then appears in the form of fine rusty lines." (1) | | |

locations | | |
| Geologic age: | Ordovician | | |
| Geologic formation: | Galena Gp., Stewartville Fm. (1) | | |
| Description: | "Lower level or production face is generally a
medium to thick (mostly thick) bedded buff to
gray dolomite or limestone. Weathered areas
display a pitted weathering surface. The upper
level is thin to medium beds, with some thick
beds, becoming highly weathered towards top
and rubbly." (1) | | |
